## **Survey of Current Business**

Table of Contents October 2005

- iii. Director's Message
- iv. Taking Account
- 1. Business Situation: Final Estimates for the Second Quarter of 2005

Real GDP increased 3.3 percent after increasing 3.8 percent in the first quarter, primarily reflecting a downturn in private inventory investment. Corporate profits increased \$59.3 billion after increasing \$68.7 billion.

#### 5. Receipts and Expenditures of State Governments and of Local Governments

Net saving of state governments and net saving of local governments increased in 2003 and 2004 after decreasing in 2001 and 2002, according to the estimates that incorporate the results of the most recent comprehensive NIPA revision.

#### 11. Newly Available NIPA Tables

BEA releases the estimates of government consumption expenditures and gross investment by function from the annual NIPA revision.

#### 21. Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade, 2001:IV-2005:II

The estimates have been updated, including the estimates of inventories for manufacturing by stage of fabrication.

#### 25. U.S. International Services: Cross-Border Trade in 2004 and Sales Through Affiliates in 2003

U.S. exports of services increased 11 percent to \$323.4 billion, and U.S. imports increased 15 percent to \$258.1 billion. Sales of services abroad by foreign affiliates of U.S. companies increased 13 percent to \$477.5 billion, and U.S. sales by U.S. affiliates of foreign companies increased 4 percent to \$381.4 billion.

#### 78. U.S. International Transactions: Second Quarter of 2005

The U.S. current-account deficit decreased \$3.0 billion, to \$195.7 billion, reflecting a decrease in net outflows for unilateral current transfers and a slight increase in the surplus on services. In the financial account, net recorded financial inflows decreased \$19.7 billion, to \$142.3 billion.

- 84. The Effect of the Job Creation Act of 2004 on U.S. International Transactions (box)
- 111. State Personal Income: Second Quarter of 2005 and Revised Estimates for 2002-2005:I

Personal income growth for the Nation picked up, increasing 1.5 percent after increasing 0.6 percent in the first quarter of 2005.

- 116. New Treatment of State Estimates of Military Compensation (box)
- 161. Schedule of BEA News Releases in 2006
- D-1. BEA Current and Historical Data

#### **Looking Ahead**

Annual Industry Accounts. Revised estimates for 2002-2004 are scheduled for an upcoming issue of the Survey.

October 2

## **Director's Message**

In this edition of the Survey of Current Business, we are confident you will find a number of informative articles. One of these is our article on international sales and purchases of services that combines cross-border trade and sales through affiliates of multinational companies. It presents more detailed estimates than are available quarterly.

Another article distinguishes the receipts and expenditures of state governments from local governments. While the national income and product accounts (NIPAs) have included a table of combined state and local government receipts and expenditures, we have released separate state and local tables less regularly over the years. Beginning with this issue, BEA will publish separate tables every year following the annual revision of the NIPAs.

We also present articles that discuss the "final" second-quarter estimates of gross domestic product, second-quarter state personal income estimates and revised estimates for previous years, and second-quarter international transactions.

Finally, in today's world of performance measures, we conduct an annual end-of-fiscal-year assessment of BEA's accomplishments. I am quite proud of BEA's staff for all it accomplished. In FY 2005, BEA achieved all of the major human resources, customer, management, and statistical goals outlined in its strategic plan. We incorporated the Census Bureau's new quarterly services estimates into GDP estimates. We incorporated the results of the expanded BEA quarterly services surveys into our international trade in services estimates. And we published accelerated gross output estimates from the 2002 benchmark input-output accounts. These were just a few of BEA's accomplishments.

Looking forward, we have ambitious plans for further progress. We will provide a revised strategic plan for your comments and suggestions in November.

J. Steven Landefeld

Director, Bureau of Economic Analysis

### **Taking Account**

## Paper Studies Industry Accounts and GSP

The December 2004 release of the comprehensive revision of BEA's gross state product (GSP) estimates marked another step forward in its overall efforts to better integrate its main accounts—a key long-term goal.

The revised GSP estimates were integrated with BEA's two annual industry accounts: The input-output (I-O) accounts and the gross-domestic-product-by-industry accounts. These annual industry accounts were released on an integrated basis for the first time in June 2004.

In a recent working paper, BEA regional economists John Sporing, Jr., George Downey, and John Kort discuss BEA's new estimation procedure for integrating annual "purchased services" estimates from the annual industry accounts into the GSP accounts for most goods-producing industries for 1998–2002.

According to the authors, the new GSP estimation procedure results in a significant improvement that stems from the integration of the annual industry accounts.

Previously, the GSP accounts used only benchmark-year estimates of "purchased services." Measures for nonbenchmark years were linear interpolations between benchmark years or extrapolations after a benchmark year. The authors found that the integration of the industry accounts resulted in more accurate annual estimates of "purchased services." This in turn resulted in an improvement in the accuracy of the GSP estimates for most goods-producing industries and for total GSP.

The working paper "Further Integrating BEA's Economic Accounts: Introducing Annual Input-Output Estimates into the Gross State Product by Industry Accounts" is available on the BEA Web site, <www.bea.gov>, by clicking on "Papers and Working Papers."

## **BEA Releases New Methodology Paper**

BEA's Government Division has released a new methodology paper *Government Transactions* (MP-5).

The new paper presents the conceptual framework for government transactions in the national income and product accounts (NIPAs). It describes the sources and methods used to prepare annual benchmark estimates and other annual, quarterly, and monthly estimates of all government receipts and expenditures.

The new methodology paper also describes the preparation of estimates of current-dollar and real government spending by function. In addition, the paper details how and where these estimates are presented.

The new paper comes 17 years after the previous government transactions methodology paper was published. Many of the key issues explored in the new methodology paper were initially discussed in various articles published in the Survey of Current Business.

The new paper is one of a series of papers designed to provide information on the methodologies used to prepare the NIPAs. The new paper and other methodology papers are available on the BEA Web site at <www.bea.gov/bea/mp.htm>.

## Printer Friendly NIPA Tables Now Available

BEA now offers NIPA tables in printer friendly formats on its Web site, <www.bea.gov>.

Users can customize the tables by selecting various options, such as small or large font, legal or letter paper, and portrait or landscape orientation.

The goal of this new feature is to allow users to quickly print tables that are easier to read and scan. Users can access the new feature by simply scrolling to the bottom of any NIPA table on the BEA Web site, selecting printer options, and then clicking to print the table.

A help file is also available.

October 2005

### **Business Situation**

### Final Estimates for the Second Quarter of 2005

A CCORDING to the "final" estimates of the national income and product accounts (NIPAs), real gross domestic product (GDP) increased 3.3 percent in the second quarter of 2005 after increasing 3.8 percent in the first quarter (table 1 and chart 1).¹ The final estimate of growth is the same as the "preliminary" estimate released in August. In the final estimates, a small upward revision to consumer spending on services and a downward revision to imports of services were

offset by small downward revisions to exports of services and to inventory investment (table 2).<sup>2</sup>

- Prices of goods and services purchased by U.S. residents increased 3.3 percent, 0.2 percentage point more than in the preliminary estimate. In the first quarter, prices had increased 2.9 percent. The acceleration mainly reflected an acceleration in energy prices.
- •Real disposable personal income (DPI) increased 1.5 percent, 0.5 percentage point less than in the preliminary estimate. Real DPI had decreased 3.4 percent in the first quarter.

The deceleration in real GDP growth in the second quarter primarily reflected a downturn in private inventory investment that was partly offset by a

Christopher Swann prepared this article.

**Chart 1. Real Gross Domestic Product** 

<sup>1.</sup> Quarterly estimates in the NIPAs are expressed at seasonally adjusted annual rates, unless otherwise specified. Quarter-to-quarter dollar changes are differences between these published estimates. Percent changes are calculated from unrounded data and are annualized. "Real" estimates are presented in chained (2000) dollars, and price indexes are chain-type measures.

<sup>2.</sup> In this article, "consumer spending" is shorthand for the NIPA series "personal consumption expenditures," "government spending" is shorthand for "government consumption expenditures and gross investment," and "inventory investment" is shorthand for "change in private inventories."

downturn in imports and by accelerations in business investment in equipment and software, in exports, in government spending, and in residential fixed investment.

- Inventory investment subtracted 2.14 percentage points from real GDP growth after adding 0.29 percentage point in the first quarter. Real inventory stocks decreased \$59.9 billion in the second quarter; stocks had increased \$8.1 billion in the first quarter.
- Consumer spending decelerated slightly, increasing 3.4 percent after increasing 3.5 percent; it added 2.35 percentage points to real GDP growth after adding 2.44 percentage points in the first quarter.

Nore. The final estimates for the first quarter of 2005 incorporate the following revised or additional major source data that were not available when the preliminary estimates were prepared.

Personal consumption expenditures: Retail sales for June (revised), electricity data (newly available), and telephone revenue data (newly available).

Nonresidential fixed investment: Construction put-in-place data for May and June (revised) and manufacturers' shipments of machinery and equipment for June (revised).

Residential fixed investment: Construction put-in-place data for May and June (revised).

Change in private inventories: Manufacturers' and trade inventories for June (revised).

Exports and imports of goods and services: International transactions data for the first and second quarters (revised).

Government consumption expenditures and gross investment: State and local government construction put-

Government consumption expenditures and gross investment: State and local government construction put-in-place data for May and June (revised).

Wages and salaries: Employment, average hourly earnings, and average weekly hours for June (revised), and data on employer costs for employee compensation for the second quadrer (newly available).

GDP prices: Export and import prices for April through June (revised), unit-value index for petroleum imports for June (revised), and prices of single-family houses under construction for the quarter (revised).

- Net exports added 1.11 percentage points to real GDP growth after subtracting 0.40 percentage point in the first quarter. Imports turned down, decreasing 0.3 percent after increasing 7.4 percent, and added 0.04 percentage point to real GDP growth after subtracting 1.14 percentage points in the first quarter. Exports increased 10.7 percent after increasing 7.5 percent and added 1.07 percentage points to real GDP growth after adding 0.74 percentage point. The acceleration in exports resulted from an acceleration in exports of goods that was partly offset by a downturn in exports of services.<sup>3</sup>
- Business investment in equipment and software accelerated, increasing 10.9 percent after increasing 8.3 percent in the first quarter, and added 0.83 percentage point to real GDP growth after adding 0.64 percentage point.
- Government spending accelerated, increasing 2.5 percent after increasing 1.9 percent, and added 0.47 percentage point to real GDP growth after adding 0.35 percentage point.
- Residential fixed investment accelerated, increasing 10.8 percent after increasing 9.5 percent, and contributed 0.62 percentage point to real GDP growth after contributing 0.54 percentage point.

The final estimates for the second quarter also show the following:

- Real final sales of domestic product (real GDP less the change in private inventories) increased 5.6 percent in the second quarter after increasing 3.5 percent in the first quarter.
- •Real gross domestic purchases (GDP less net exports) increased 2.1 percent after increasing 4.0 percent.
- Real gross national product (GNP) increased 3.2 percent after increasing of 3.9 percent.<sup>4</sup> The secondquarter increase in GNP is 0.1 percentage point less than the increase in GDP; an increase in income receipts to the rest of the world more than offset an increase in income payments from the rest of the world.
- The gross national saving rate (saving from all sources as a percentage of gross national income)

<sup>3.</sup> Imports include the value of goods and services that are produced abroad and therefore are not considered domestic production. However, in calculating GDP as the sum of final expenditures, it is necessary to subtract imports because the domestic component categories of expenditures—consumer spending, business investment in equipment and software, inventory investment, and government spending-include imported goods and services.

<sup>4.</sup> GNP is a measure of the goods and services produced by labor and property supplied by U.S. residents regardless of where they are located; in contrast, GDP is a measure of the goods and services produced by labor and property in the United States, regardless of nationality. The two measures are related as follows: GNP equals GDP plus income receipts from the rest of the world minus income payments to the rest of the world.

was 13.5 percent in the second quarter and 13.4 percent in the first quarter, and the net saving rate increased to 1.7 percent from 1.5 percent.<sup>5</sup>

• The personal saving rate decreased to 0.1 percent in the second quarter from 0.5 percent in the first quarter.

#### **Corporate Profits**

Profits from current production increased \$59.3 billion (4.6 percent at a quarterly rate) in the second quarter after increasing \$68.7 billion (5.6 percent) in the first quarter (table 3).6 In the second quarter, profits of domestic industries increased \$55.5 billion after

increasing \$53.9 billion, but profits from the rest of the world decelerated.

The second-quarter increase in profits of domestic industries was accounted for by profits of domestic nonfinancial corporations, which increased \$82.5 billion after increasing \$17.8 billion in the first quarter. In contrast, profits of domestic financial corporations decreased \$26.9 billion after increasing \$36.0 billion. Real gross value added of nonfinancial corporations increased. Profits per unit of real product increased, reflecting an increase in unit prices and decreases in both unit labor costs and unit nonlabor costs.

Profits from the rest of the world increased \$3.7 billion (1.9 percent) in the second quarter after increasing \$14.9 billion (8.3 percent).<sup>7</sup> The second-quarter increase reflected a larger increase in receipts from foreign affiliates of domestic parents than the increase in payments by domestic affiliates to foreign parents. Receipts from foreign affiliates of domestic parents increased \$14.7 billion (4.7 percent) after decreasing \$19.1 billion (5.7 percent). Payments by domestic affiliates to foreign parents increased \$10.9 billion (9.1 percent) after decreasing \$33.9 billion (22.0 percent).

Taxes on corporate income increased \$9.9 billion (2.7 percent) in the second quarter. After-tax profits from current production increased \$49.4 billion (5.3 percent).

Net dividends increased \$11.4 billion (2.3 percent) after decreasing \$94.4 billion (16.0 percent).<sup>8</sup> Undistributed corporate profits (a measure of net saving that equals after-tax profits less dividends) increased \$38.0 billion (8.8 percent) in the second quarter.

Net cash flow from current production, a profits-related measure of internally generated funds available for investment, increased \$41.7 billion (3.4 percent) in the second quarter after increasing \$95.4 billion (8.3 percent) in the first quarter.<sup>9</sup> The ratio of cash flow to nonresidential fixed investment, an indicator of the extent to which the current level of investment could be financed by internally generated corporate funds, increased to 97.5 in the second quarter from 96.8 in the first quarter.

<sup>5.</sup> Net saving, which excludes the consumption of fixed capital, is a measure of the saving that is available for augmenting the stock of fixed assets.

<sup>6.</sup> Profits from current production is estimated as the sum of profits before tax, the inventory valuation adjustment, and the capital consumption adjustment; it is shown as "corporate profits with inventory valuation and capital consumption adjustments" in NIPA tables 1.7.5, 1.10–1.12, 1.14–1.16, and 6.16D. Percent changes in profits are shown at quarterly, not annual, rates.

<sup>7.</sup> Profits from the rest of the world is the difference between (1) receipts by U.S. residents of earnings from foreign affiliates plus dividends received by U.S. residents from unaffiliated foreign corporations and (2) payments by U.S. affiliates of earnings to foreign parents plus dividends paid by U.S. corporations to unaffiliated foreign residents. These estimates include capital consumption adjustments (but not inventory valuation adjustments) and are derived from BEA's international transactions accounts.

<sup>8.</sup> The large decrease in net dividends in the first quarter followed the large fourth-quarter increase in net dividends that resulted from a special dividend payment by the Microsoft Corporation. For more information, see "The Microsoft Special Dividend" at <www.bea.gov/bea/faq/national/FAO.htm>.

<sup>9.</sup> Cash flow from current production is undistributed profits with inventory valuation and capital consumption adjustments plus the consumption of fixed capital.

**Industry profits.** The current-production measure of profits is not available at the detailed industry level, because estimates of the capital consumption adjustment (CCAdi) at the detailed level are not available.10 (Estimates of the CCAdj are only available for total financial industries and for total nonfinancial industries.) Consequently, industry profits are best measured by profits with inventory valuation adjustment (IVA).11

In the second quarter, industry profits with IVA increased \$54.1 billion after increasing \$259.5 billion. For domestic nonfinancial corporations, profits with IVA increased \$78.1 billion; the increase was wide-

spread, and the largest increases were in manufacturing industries and in wholesale trade. For domestic financial industries, profits with IVA decreased \$27.7 billion (chart 2).

The increase in industry profits is somewhat smaller than the increase in profits from current production, reflecting the differing estimates of depreciation that underlie the two measures. Profits from current production includes the CCAdj, which increased \$5.2 billion in the second quarter. 12 The CCAdj had decreased \$190.8 billion in the first quarter. In the first quarter, the large increase in industry profits and the large decrease in the CCAdj reflected the expiration of the "bonus" depreciation provisions of both the Job Creation and Worker Assistance Act of 2002 and the Jobs and Growth Tax Relief Reconciliation Act of 2003; these acts had increased the immediate depreciation writeoff that corporations could claim.

Chart 2. Corporate Profits with Inventory Valuation Adjustment: Change From 2005:I to 2005:II

<sup>10.</sup> The CCAdj is the difference between consumption of fixed capital (the decline in the value of the stock of assets due to wear and tear, obsolescence, accidental damage, and aging) and capital consumption allowances (tax-return depreciation).

<sup>11.</sup> The IVA adjusts the NIPA estimates of business income for inventory profits or losses; the IVA is the difference between the cost of inventory withdrawals valued at acquisition cost and the cost of inventory withdrawals valued at replacement cost.

<sup>12.</sup> The CCAdj converts the depreciation of fixed assets reported on a taxreturn, historical-cost basis to a current-cost basis.

# Receipts and Expenditures of State Governments and of Local Governments

#### New Estimates for 2002–2004 and Revised Estimates for 1990–2001

By Bruce E. Baker

THE national income and product accounts (NIPAs) have long included an account showing combined state and local government receipts and expenditures. Periodically, the Bureau of Economic Analysis (BEA) has also published two tables that separately showed state government and local government receipts and expenditures. Beginning with this article, BEA will publish these separate tables annually following the release of the annual or comprehensive revision of the NIPAs.<sup>1</sup>

The most recent presentation of separate state and local government tables was published in the SURVEY of CURRENT BUSINESS in June 2003; it included estimates for 1959–2001.<sup>2</sup> In this article, BEA presents revised estimates of receipts and expenditures for both state and local governments for 1990–2001 and new estimates for 2002–2004. These new estimates incorporate the results of the most recent comprehensive revision of the NIPAs, which was released in December 2003.

Highlights of the new and revised estimates include the following:

- Net saving of state governments increased in 2003 and 2004 after decreasing sharply in 2001 and 2002.
- Net saving of local governments also increased in 2003 and 2004 after decreasing in 2001 and 2002.

The purpose of these new tables is to contribute to a better understanding of this important sector of the

Steven J. Andrews prepared the estimates presented in this article.

economy by allowing better comparisons of NIPA government data with data from other sources, including the Census Bureau, the National Association of State Budget Officers, and others.

The remainder of this article includes two main sections. The first section provides a brief summary of the new and revised estimates of "net government saving" and "net lending or net borrowing." The second section discusses key changes to the state government and local government accounts as a result of the methodological changes and other changes in the NIPAs that affected the state and local government estimates and that were a part of the 2003 comprehensive NIPA revision.

## Estimates of "Net Government Saving" and "Net Lending or Net Borrowing"

The NIPA measure of "net government saving" shows the balance of receipts and expenditures for the current period for both state governments and local governments in aggregate. Net government saving includes general funds, "rainy day" funds, and funds from programs funded by grants from other levels of government. Net government saving excludes capital expenditures; however, within current expenditures, consumption expenditures are based on a measure of costs that includes "consumption of fixed capital" (CFC), also known as depreciation, as a partial measure of the services of government-owned fixed assets.

The NIPA measure of "net lending or net borrowing" is a measure of the borrowing or lending that is required by state governments and by local governments in aggregate so that total receipts equals total expenditures. If total expenditures exceed total receipts, net borrowing is required. "Net lending or net borrowing" is defined as net saving plus capital receipts less capital expenditures less purchases of non-produced assets; it excludes CFC.

<sup>1.</sup> Comprehensive revisions occur about every 5 years and usually involve incorporating new benchmark input-output data, rebasing price and quantity indexes, updating concepts and presentation, and implementing statistical and methodological revisions back to 1929. Annual revisions primarily involve statistical revisions to data for the previous 3 years only.

<sup>2.</sup> Bruce E. Baker "Receipts and Expenditures of State Governments and of Local Governments, 1959–2001," SURVEY 83 (June 2003): 36–53.

## Recent trends and revisions of previous estimates

State governments. Net saving by state governments has increased in recent years. In 2004, current expenditures exceeded current receipts by \$67.8 billion. The deficit was \$82.5 billion in 2003 and \$90.9 billion in 2002 (table 1). The decreases in the deficit reflected stronger economic growth after the recession in 2001; the stronger economy led to stronger growth in tax receipts.

The revisions to net saving for state governments were relatively small for 1990–2001, the latest year for which data were published in the 2003 article (chart 1). The revised estimates did not meaningfully alter the

**Chart 1. State Governments, Net Saving** 

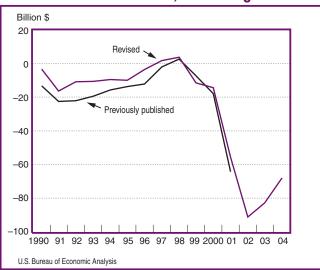

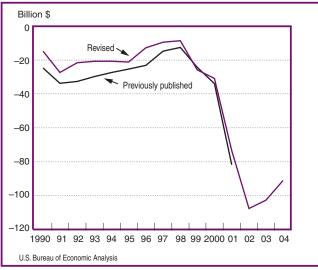

Chart 2. State Governments, Net Lending or Net Borrowing (–)

trends shown by the previously published estimates.

Net borrowing by state governments showed much the same pattern as net saving (chart 2). In 2004, state governments borrowed \$91.2 billion, compared with \$102.7 billion in 2003 and \$107.6 billion in 2002. The revisions to net borrowing for 1990–2001 were also generally small.

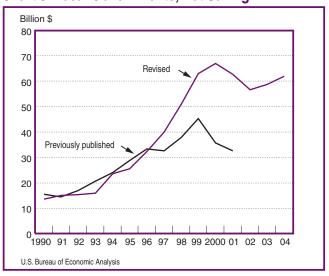

Local governments. Net saving by local governments has markedly risen in recent years. In 2004, net saving was \$62.0 billion, compared with \$58.7 billion in 2003 and \$56.7 billion in 2002. A major contributor to the increase in net saving was property tax revenue, which was pushed higher by strong increases in real estate values.

For 1990–2001, the revisions to net saving by local governments were generally larger than the revisions to net saving by state government. The upward revisions mainly reflect upward revisions to property tax revenue and downward revisions to consumption expenditures, particularly for services (chart 3).

#### **Data Availability**

This article presents estimates of current receipts and expenditures for state and for local governments for 1990–2004. BEA has also revised the estimates back to 1959, yielding a consistent times series from 1959–2004. The entire time series is presented as underlying NIPA tables on BEA's Web site at <www.bea.gov/bea/dn/nipaweb/nipa\_underlying/ Index.asp>.

**Chart 3. Local Governments, Net Saving** 

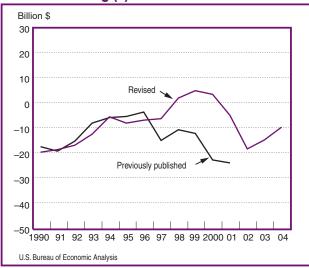

In general, local government estimates are subject to larger revisions than state government estimates because they are based on a single source of data, the Census Bureau's *Government Finances* series. In contrast, the state estimates are based on numerous data sources as well as *Government Finances*. In addition, until the 2004 annual revision, the availability of local data from *Government Finances* lagged 3 years, compared with a 2-year lag for state data. The revised local government estimates were based on *Government Finances* data released in 2005, which covered the years through fiscal 2003; the *Government Finances* data replaced previous BEA judgemental extrapolations of local government receipts and expenditures.

"Net lending or net borrowing" by local governments showed a mixed pattern for 1990–2001 (chart 4). Through the 1990s, the amount local governments borrowed trended lower, reflecting the pattern of net saving. In 1999, local governments became net lenders. In 2001, local governments again became net borrowers. Net borrowing crested in 2002, at \$18.5 billion. Since then it has trended lower, falling to \$15.0 billion in 2003 and \$9.8 billion in 2004.

The revisions to "net lending or net borrowing" by local governments were also significant. For example, the revised estimates show local governments as net lenders in 1999–2000, while the previously published estimates show that local governments remained net borrowers in these years.

## Chart 4. Local Governments, Net Lending or Net Borrowing (–)

#### **Key Changes Since June 2003**

The 2003 comprehensive revision of the NIPAs included extensive changes in presentation. Like all comprehensive revisions, it also included conceptual, statistical, and methodological changes.<sup>3</sup>

#### **Presentational changes**

Compared with the tables from June 2003, the new receipts and expenditures tables reflect a variety of changes (tables 1 and 2).<sup>4</sup>

The new presentation of current receipts reflects the following:

- Most nontaxes are now referred to as "current transfer receipts from business and from persons."
- Corporate profits tax accruals are now referred to as "taxes on corporate income."
- Contributions for social insurance are now referred to as "contributions for government social insurance."
- •New categories have been added for "income receipts on assets." These categories include "interest receipts" and "dividends," which had previously been netted against interest payments, and "rents and royalties," which was previously part of non-taxes.
- "Current transfer receipts" is a new category that comprises grants-in-aid from Federal, state, and local governments, "transfer receipts from business," and "transfer receipts from persons." These transfer receipts include fines, fees, tobacco settlements, donations, unclaimed bank deposits, and other miscellaneous items—all of which were previously recorded as nontaxes. These new transfer receipts also include "net insurance settlements," a new category that reflects BEA's new treatment of property and casualty insurance.
- "Current surplus of government enterprises" is now recorded as a current receipt. Previously, the surplus was netted against "subsidies" paid to businesses.

<sup>3.</sup> For more details, see Brent R. Moulton and Eugene P. Seskin "Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts: Changes in Definitions and Classifications," SURVEY 83 (June 2003): 17–34.

<sup>4.</sup> For a more complete discussion of these changes see Nicole Mayer-hauser, Shelly Smith, and David F. Sullivan, "Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts: New and Redesigned Tables" Survey 83 (August 2003): 7–31.

The new presentation of current expenditures reflects the following changes:

- Transfer payments to persons are now referred to as "government social benefit payments to persons."
- "Interest payments" are now shown gross of interest receipts.
- "Subsidies" are now shown independently; they are no longer netted against the surplus of government enterprises.

#### **Conceptual changes**

Two of the most wide-ranging conceptual changes incorporated as part of the 2003 comprehensive NIPA revision concerned commercial banking services and property and casualty insurance services. The 2003 comprehensive revision also included a reclassification of Indian tribal governments.

Banking. The revised treatment of commercial banking shifted part of the value of implicit services provided by the banks from depositors to borrowers, recognizing that both borrowers and depositors receive these services from banks. State and local governments are both depositors and borrowers; therefore, estimates of interest receipts and interest payments were both revised. The net revision to interest receipts and payments was offset by a revision to consumption expenditures, so the revised treatment did not affect net saving or "net lending or net borrowing."

Property and casualty insurance. The revised treatment of insurance services affected state and local governments because these governments purchase property and casualty insurance. The services provided by these insurance providers are now calculated as premiums plus premium supplements (investment income) less "normal" insurance losses. Losses above or below "normal" losses (which are estimated using historical trends) are treated as transfers from business to government. This new treatment affected state government and local government estimates of purchases of insurance services and of interest receipts. The new treatment also added a new category of transfer receipts, "net insurance settlements." This improved treatment of insurance did not affect net saving or net

lending.

Indian tribal governments. Tribal governments are now treated as local governments, and Indian casinos are classified as government enterprises. The compensation earned by employees of the tribal governments and casinos are thus recorded as compensation of general government and of government enterprises, respectively. Profits or losses earned by the casinos are reflected in the current surplus of government enterprises; profits and losses affect "net government saving" and "net lending or net borrowing."

#### Statistical and methodological changes

As part of the 2003 comprehensive NIPA revision, new source data were incorporated, and methodologies were improved. The most comprehensive source data for state and local government finances is the Census Bureau's *Government Finances* series of surveys. Since June 2003, 3 additional years of fiscal year data have become available for states—for 2001, 2002, and 2003. For local estimates, 4 years of data were incorporated—for 2000–2003. Other new and revised source data have also been incorporated. The changes are too numerous to be listed here, but a summary can be found in the September 2003 Survey.<sup>5</sup>

Methodological enhancements were also part of the 2003 comprehensive revision of the NIPAs. The enhancement that had the greatest quantitative impact was the allocation of fiscal year tax revenue to quarters, and then to calendar years. Under the previous method, revenue for fiscal years was averaged into revenue for calendar years and then interpolated into revenue for quarters. Revenue for quarters was then aggregated into revenue for calendar years. The drawback of this method was that revenue for quarters, when aggregated back into fiscal years, did not match the original fiscal year revenues. The new method derives quarters from fiscal years instead of calendar years, allowing both calendar years and fiscal years to be constructed with precision.

<sup>5.</sup> See Carol E. Moylan and Brooks B. Robinson, "Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts: Statistical Changes," Survey 83 (September 2003): 17–44.

Note. State receipts plus local receipts and state expenditures plus local expenditures do not sum to the consolidated state and local government account totals, because grants-in-aid from states to local governments and from local to state governments are netted in the consolidated account totals. In addition, the receipt category "surplus of government enter-

prises" and the expenditure category "subsidies" do not sum to the consolidated account totals, because the level of government making subsidy payments accounts for them as subsidies while recipient governments account for them as surpluses of government enterprises.

Note. State receipts plus local receipts and state expenditures plus local expenditures do not sum to the consolidated state and local government account totals, because grants-in-aid from states to local governments and from local to state governments are netted in the consolidated account totals. In addition, the receipt category "surplus of government enter-

prises" and the expenditure category "subsidies" do not sum to the consolidated account totals, because the level of government making subsidy payments accounts for them as subsidies while recipient governments account for them as surpluses of government enterprises.

October 2005 11

### **Newly Available NIPA Tables**

As part of the annual revision of the national income and product accounts (NIPAs), this report presents NIPA tables 3.15.1–3.15.6, tables 3.16–3.19, and tables 8.1–8.6. Revisions for tables 3.18B and 3.19 begin with 1993. The tables are available on BEA's Web site <www.bea.gov>.

The August 2005 issue of the Survey of Current Business includes an article that describes the annual revision; it also includes most of the full set of NIPA tables. Table 7.19 was published in the September issue.

Tables 2.9 and 7.20 will be published in the November Survey.

Note. Government consumption expenditures and gross investment is net of sales to other sectors. Thus, growth in the prices or quantities of sales to other sectors may partially, exactly, or more than offset the growth in the prices or quantities of gross consumption expenditures and gross investment.

<sup>1.</sup> Equals Federal Government current expenditures less grants-in-aid to state and local governments plus state and local government current expenditures. Federal grants-in-aid to state and local governments by function are shown in table 3.17.

2. Prior to 1960, Federal interest receipts are not available separately but are included in interest payments, which is shown net of Federal interest receipts.

3. Equals unallocable state and local government expenditures, less "wage accruals less disbursements" shown in table 3.1; includes Federal Government revenue sharing grants to state and local governments beginning with 1972 and ending with 1987.

4. Consists of state and local government publicly owned liquor store systems, government-administered

lotteries and parimutuels, and other commercial activities.

5. Consists of social insurance funds, including old age, survivors, and disability insurance (social security), and railroad retirement. Excludes government employee retirement plans.

6. Consists primarily of Federal Government revenue sharing grants to state and local governments beginning with 1972 and ending with 1987, less "wage accruals less disbusements" shown in table 3.2.

7. Equals unallocable state and local government expenditures less "wage accruals less disbursements" shown in table 3.3.

8. Consists of current expenditures for sanitation.

<sup>1.</sup> Equals consumption expenditures, government social benefits, interest payments, subsidies, less "wage accruals less disbursements"; for Federal Government, also includes grants-in-aid to State and local governments and other current transfer payments to the rest of the world (net). Government, Federal Government, and state and local government current expenditures are shown separately in tables 3.1, 3.2, and 3.3.
2. Federal grants-in-aid to state and local governments are included in Federal current expenditures; because the grants are transactions between levels of government, they are eliminated in the consolidation of the government sector.
3. No state and local government capital transfers have been identified.

<sup>4.</sup> Consists of forgiveness of debts owed by foreign governments to the U.S. Government, and the December 1999 transfer to the Republic of Panama of the U.S. Government's assets in the Panama Canal Commission.

5. Consists of Federal Government investment grants to state and local governments.

6. Consists of maritime construction subsidies paid to business by the Federal Government.

7. Consists of Federal Government investment grants to state and local governments and beginning with October 2002, payments to the Uniformed Services Retiree Health Care Fund to amortize the unfunded liability.

Consists largely of contributions for social insurance by residents of U.S. territories and Puerto Rico.
 These transactions are included in the NIPA personal sector. Beginning with October 2002, the transactions include the Uniformed Services Retiree Health Care Fund.

the Uniformed Services Retiree Health Care Fund.

3. Consists of estate and gift taxes.

4. Beginning with 1996, consists largely of Universal Service Fund receipts; prior to 1996 consisted largely of U.S.

Treasury receipts from sales of foreign currencies to Government agencies.

5. Includes proprietary receipts that are netted against outlays in the budget and that are classified as receipts in the NIPAs. Also includes some transactions that are not reflected in the budget data but that are added to both receipts and expenditures in the NIPAs.

6. Consists largely of social benefits, subsidies, and grants-in-aid to residents of U.S. territories and Puerto Rico.

7. Consists of transactions (not included in the budget totals) that record all cash flows arising from post-1991 direct loan obligations and loan guarantee commitments. Many of these flows are for new loans or loan repayments; conse-

quently, related entries are included in "Loan disbursements less loan repayments and sales."

8. Consists largely of agencies or accounts such as the Postal Service and the Federal Financing Bank that were not included in the budget in some time periods, and beginning with 1996, the Universal Service Fund.

9. Net investment is gross investment less consumption of fixed capital for government enterprises and general government.

10. Consists of investment grants to State and local governments and maritime construction subsidies. Does not include the forgiveness of debts owed by foreign governments to the U.S. Government or payments to the Uniformed Services Retiree Health Care Fund to amortize unfunded liability; both are classified as capital transfers paid by the United States and are excluded from both budget outlays and NIPA current expenditures.

11. Consists of net sales of land other than the Outer Continental Shelf and, beginning with 1995, includes the auction of the radio spectrum.

of the radio spectrum.

12. Consists largely of net expenditures of foreign currencies

<sup>1.</sup> Contributions received, interest received, and dividends received are included in the NIPA personal 1. Contributions received, microstrate received, and dividends received are included in the NIPA personal sector. Capital gains net of losses are excluded from the NIPAs.
2. Consists of employer and employee contributions, except employer contributions to their own employee retirement plans.
3. Prior to 1988, dividends received is included in interest received (line 5).
4. Prior to 1985, capital gains (net of losses) of state and local employee retirement plans is included in line.

these sales is therefore required for both receipts and expenditures. The amount of the reconciliation item is less than the sales shown in table 3.10.5 because Census total revenue does not include medical vendor payments made by state and local governments to public institutions (classified as an intragovernmental transaction by Census) or the administrative expenses of state and local employee retirement plans (treated in

<sup>4.</sup> Prior to 1985, capital gains (net of losses) of state and local employee retirement plans is included in line

1.

5. Unemployment insurance is recorded as a Federal program in the NIPAs.

6. Consists of estate and gift taxes and Federal investment grants.

7. Excludes current expenditures of Indian tribal government enterprises.

8. In the NIPAs, final expenditure components of GDP are recorded net of sales or receipts; all currentaccount sales by general government are therefore deducted in the calculation of NIPA current expenditures. However, most sales by general government are included in Census total revenue; a reconciliation item for

transaction by Census of the administrative expenses of state and local employer returnment parts (treated in the NIPAs as sales by government to the personal sector).

9. Includes timing differences that arise from restating the Census Bureau data to a year ending June 30. Census Bureau measures of state and local government revenue and expenditures (lines 1 and 25) primarily represent a fiscal year ending June 30, but some governments use other fiscal years. The NIPA measures shown in this table are for the fiscal year ending June 30, and are consistent with the not seasonally adjusted estimates in table 8.4

Shown in this lable are no the listed year enough out of the NIPA personal sector.

10. These transactions are included in the NIPA personal sector.

11. Net investment is gross investment less consumption of fixed capital for government enterprises and general government.

October 2005 21

# Real Inventories, Sales, and Inventory-Sales Ratios for Manufacturing and Trade, 2001:IV-2005:II

The quarterly estimates that are presented in this report incorporate the results of the recent annual revision of the national income and product accounts. The monthly estimates for January 2005 to April 2005 have also been revised; the estimates for May and June are new, and the estimates for July are preliminary.

Tables 1B, 2B, 3B, and 4B present chain-weighted estimates. Table 1B presents inventories, and table 2B presents sales. Table 3B presents the inventory-sales ratios that can be used to assess the likelihood that businesses will add to, or reduce, inventories in response to changes in demand; these ratios supple-

ment the quarterly current-dollar and real estimates of ratios of inventories to final sales of domestic business, of nonfarm business, and of goods and structures that are presented in NIPA tables 5.7.5B and 5.7.6B. Table 4B presents estimates of manufacturing inventories by stage of fabrication.

The estimates for 1967 forward are available in interactive tables on BEA's Web site at <www.bea.gov>. Click on "Gross Domestic Product," and under "Supplemental Estimates," click on "Underlying detail tables" and then on "List of Underlying Detail Tables."

p Preliminary

Notes. Estimates in this table are based on the North American Industry Classification System (NAICS).
Chained (2000) dollar inventory series are calculated to ensure that the chained (2000) dollar change in inventories for

2000 equals the current-dollar change in inventories for 2000 and that the average of the 1999 and 2000 end-of-year chain-weighted and fixed-weighted inventories are equal. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

p Preliminary
Norss. Estimates in this table are based on the North American Industry Classification System (NAICS).
Chained (2000) dollar sales are calculated as the product of the chain-type quantity index and the 2000

current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

### **U.S. International Services**

### Cross-Border Trade in 2004 and Sales Through Affiliates in 2003

By Erin Nephew, Jennifer Koncz, Maria Borga, and Michael Mann

N this presentation of U.S. international sales and **1** purchases of services, the Bureau of Economic Analysis (BEA) takes a broad perspective that includes both transactions in services that cross borders through exports and imports, which are recorded in the international transactions accounts, and transactions in services through direct investment. This perspective recognizes the extent that multinational companies (MNCs) use their affiliates that are located in—but owned outside—the markets that they serve. It reflects the way that MNCs fashion their worldwide operations and the importance of proximity to customers in the delivery of services. Sales through affiliates have accounted for most of the services sold to foreign markets by U.S. companies and in the United States by foreign companies for many years (table A and chart 1).

Table A. Sales of Services to Foreign and U.S. Markets

n.a. Not available

In 2004, U.S. exports of private services, at \$323.4 billion, continued to exceed imports, resulting in a surplus of \$65.3 billion on cross-border trade in services, slightly below the \$66.9 billion surplus in 2003. Historically, the United States has run surpluses in cross-border trade in services, in contrast to the persistent and growing deficit on trade in goods, which reached \$665.4 billion in 2004. U.S. sales of services abroad through foreign affiliates of U.S. companies have regularly exceeded U.S. purchases of services from U.S. affiliates of foreign companies. In 2003, the most recent year for which data are available, U.S. sales of services abroad through foreign affiliates, at \$477.5 billion, exceeded U.S. purchases of services from U.S. affiliates by \$96.1 billion.

Michael Mann and Erin Nephew prepared the section on cross-border trade, and Marie Borga and Jennifer Koncz prepared the section on sales through affiliates. In 2004, cross-border exports of services increased 11 percent, to \$323.4 billion, after a 4-percent increase in 2003 (table B). The increase was mostly accounted for by increases in travel and "other private services" (such as education, financial services, insurance, and business, professional, and technical services). Cross-border imports increased 15 percent, to \$258.1 billion,

Chart 1. U.S. International Sales and Purchases of Private Services, 1987–2004¹

in 2004 after a 7-percent increase in 2003. All major categories of services imports increased sharply in 2004 (table C). Exports and imports of travel services both increased in 2004, marking a turnaround from 3 straight years of declines from peaks reached in 2000. Travel continues to be the largest category of services exported and imported by the United States, and it had the largest increases of all services in 2004.

In 2003, sales of services abroad through foreign affiliates of U.S. companies increased 13 percent—the largest increase since a 17-percent increase

in 2000—after a 0.4-percent increase in 2002. Most of the growth in 2003 was attributable to existing affiliates; in 2000, much of the growth was accounted for by new affiliates that were acquired during the wave of cross-border mergers. In 2003, the growth in sales of services abroad partly reflected strong growth in U.S. direct investment abroad; the U.S. direct investment position abroad increased 11 percent in 2003, largely in services industries, including nonbank finance and insurance. Increases in sales of services were widespread across industries, partly reflecting the depreciation of the U.S. dollar against most major currencies, which boosted the dollar value of affiliates' foreigncurrency-denominated revenues.

In 2003, U.S. purchases of services from U.S. affiliates of foreign companies grew 4 percent. In 2002, sales by U.S. affiliates were flat, reflecting the resolution of reporting issues involving U.S. affiliates in insurance.<sup>1</sup> In 2003, growth in sales by U.S. affiliates was relatively slow despite an increase in outlays for new investment in the United States for the first time in 3 years and a pickup in U.S. economic growth. A decrease in sales of services by manufacturing affiliates with secondary activities in utilities and finance partly offset increases in sales by affiliates in other industries, particularly in insurance; much of the overall growth in other industries in 2003 was attributable to sales by new affiliates.

Comparisons between services delivered through cross-border trade and through nonbank majority-owned affiliates cannot be precise, because of differences in coverage, measurement, and classification. For example, data on cross-border trade are generally classified by type of service, but data on affiliates'

<sup>1.</sup> The estimates for 1992–2003 are revised from those published in last year's article in this series. See Christopher L. Bach, "Annual Revision of the U.S. International Accounts, 1991–2004," Survey 85 (July 2005) 54–119. Additionally, the estimates for 1997–2004 have been revised from those presented in the "Annual Revision" in the July Survey. See the box "Revisions to the Estimates of International Services" for details.

<sup>2.</sup> The estimates for 2002 are revised from those published in last year's article. The estimates for 2003 are

preliminary.

3. The estimates for 1986–88 have been adjusted, for the purposes of this article, to be consistent with those strength of the purpose of this article, to be consistent with those and methodological improvements made in the 1989 Benchmark Survey of U.S. Direct Investment Abroad. The primary improvement was that investment income of affiliates in finance and insurance was excluded from sales of services. The adjustment was made by assuming that investment income of finance and insurance affiliates in 1986–88 accounted for the same share of sales of services. plus investment income as in 1989.

plus investment income as in 1989.

4. Beginning in 1997, sales by U.S. affiliates were classified as goods or services based on industry codes derived from the North American Industry Classification System (NAICS); the estimates for prior years were based on codes derived from the 1987 Standard Industrial Classification (SIC). This change resulted in a redefinition of sales of services by affiliates, which resulted in a net shift of sales from goods to services. See the box "Changes in the Definition and Classification of Sales of Services by U.S. Affiliates" in the October 1999 Surver,

<sup>&</sup>quot;Changes in the Definition and State Section 2015.

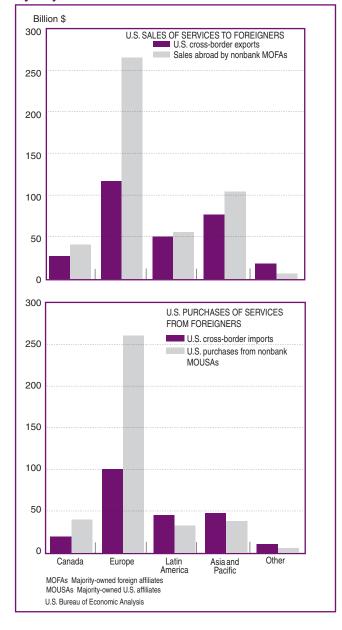

5. Beginning in 1999, sales by foreign affiliates were classified as goods or services based on industry codes derived from NAICS; the estimates for prior years were based on codes derived from the 1987 SIC. This change resulted in a redefinition of sales of services by affiliates, which resulted in a net shift of sales from goods to services. See the box "Changes in the Definition and Classification of Sales of Services by Foreign Affiliates" in the November 2001 Survey, 58; <www.bea.gov>.

<sup>1.</sup> The 2002 estimate of U.S. affiliates' sales of services was revised down, resulting in virtually unchanged sales for 2001-2002. The revision was mostly attributable to a one-time correction of reports by affiliates in insurance. Excluding the effects of these corrections, sales of services by U.S. affiliates grew 4 percent in 2002. The estimates for earlier years were not revised. Data provided by survey respondents may change because of the correction of errors, omissions, and changes in financial accounting rules. These changes will be reflected in the estimates for the most recent year and perhaps for the immediately preceding year, but not in the estimates for earlier years. In addition, when such changes occur, it often is not possible to quantify their effect on the estimates, whether for the most recent year or the preceding year. For more information, see the box "Revisions to the Estimates of International Services" on page 28.

sales are classified by primary industry of the affiliate.<sup>2</sup> Despite these differences, the large gap between sales through cross-border trade transactions and sales through affiliates suggests that the latter is the larger channel for both U.S. sales and U.S. purchases of pri-

2. One source of difference in coverage has been the inclusion of services provided by banks in cross-border exports and imports but not in sales through affiliates, which cover only nonbank affiliates. In order to address this gap in coverage, BEA collected data on sales of services through bank affiliates in its most recent benchmark surveys for U.S. direct investment abroad (covering 2004) and foreign direct investment in the United States (covering 2002). Insurance services is an example of a difference in measurement that is being addressed by BEA with the collection of new data items from insurance affiliates, beginning with the latest benchmark surveys. For more information, see the box "New Data on Insurance, Wholesale and Retail Trade, and Banking Services Sold through Affiliates."

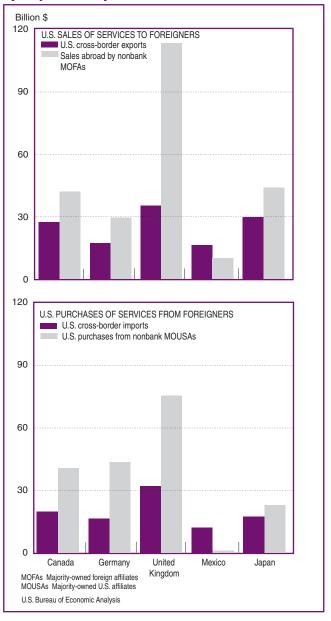

Chart 2. U.S. Sales and Purchases of Services by Major Area in 2003

vate services (charts 2 and 3).

The remainder of this article is organized in two major sections and includes an appendix. The first section presents preliminary estimates of U.S. cross-border exports and imports of private services for 2004 and revised estimates for 1992–2003, which represent international trade in the conventional sense of transactions between U.S. residents and foreign residents. These estimates are recorded in summary form in the U.S. international transactions accounts.<sup>3</sup>

Chart 3. U.S. Sales and Purchases of Services by Major Country in 2003

<sup>3.</sup> In the quarterly articles on U.S. international transactions, table 1 presents cross-border exports of private services in lines 6-10 and cross-border imports in lines 23-27; table 3 provides additional details.

#### Revisions to the Estimates of International Services

The estimates of cross-border transactions and the estimates of sales through affiliates that were presented in the October 2004 SURVEY OF CURRENT BUSINESS have been revised.

#### Cross-border trade

Cross-border exports of services in 2003 were revised down \$2.5 billion, or 1 percent, and cross-border imports were revised down \$3.6 billion, or 2 percent, from the October 2004 presentation. These revisions reflect both special revisions and the regular annual revisions that are released in June and are published in the international transactions accounts in the July Survey. As a result of the special out-of-sequence revision, the estimates of cross-border trade in services presented here differ, for the first time, from those in the July Survey.

**Special revisions.** Estimates of affiliated "other private services" for 1997–2004 were revised to remove the duplication of transactions that were reported on BEA surveys of U.S. affiliates (and that should have been excluded) and other surveys. As a result, cross-border exports for 2003 were revised down \$4.0 billion, or 1 percent, from the July 2005 presentation, and cross-border imports for 2003 were revised down \$3.6 billion, or 2 percent. (Revisions to the estimates for 2004 and for earlier years will be incorporated into the international transactions accounts and into the monthly estimates of goods and services at their next scheduled annual revision in June 2006.)

Regular annual revisions. The annual revision to the estimates of cross-border trade in services for 1992–2003 reflected the incorporation of regular source data and statistical and methodological improvements; the revision also incorporated data from the new quarterly surveys of services transactions conducted by the Bureau of Economic Analysis (BEA).

In addition, BEA continues to address gaps in coverage. For the estimates for 2002-2003, BEA extended the coverage of payments for education services to include estimates of tuition and expenses paid by U.S. students enrolled in degree-granting programs at foreign universities in the United Kingdom and Australia. As a result of the expanded coverage, education services payments were revised up \$0.3 billion for 2002, up \$0.3 billion for 2003, and up \$0.4 billion for 2004. For the estimates for 1992–2004, BEA also introduced new estimates of payments by U.S. residents for medical services abroad as a component of business, professional, and technical services. The new estimates cover payments by U.S. residents who require incidental medical care while traveling abroad and payments by U.S. residents who travel to Canada and Mexico for medical purposes. The new estimates for 1992 begin at \$0.1 billion and rise to \$0.2 billion for 2004.

#### Sales through affiliates

The estimates of sales of services through affiliates for 2003 are preliminary. The estimates for 2002 have been revised and arise from the regular annual revision of the data on the activities of

multinational companies. Estimates for earlier years are unchanged. Revisions may reflect the incorporation of newly available and improved source data, the correction of errors and omissions, or changes in financial accounting rules. Estimates of sales through affiliates for the year immediately proceeding the most recent year may be revised to reflect such changes, but it is not possible to revise the estimates for earlier years.

Sales of services through nonbank majority-owned foreign affiliates of U.S. multinational companies in 2002 were revised up \$22.4 billion, to \$423.5 billion. The revision reflects the incorporation of newly available and improved source data. Sales of services to U.S. persons by U.S. affiliates of foreign companies in 2002 were revised down \$19.1 billion, to \$367.6 billion; this revision mainly resulted from a one-time correction to reporting errors by affiliates in insurance, some of which had been reporting sales in a manner more consistent with accounting standards in the country of their owner rather than on the requested basis of U.S. generally accepted accounting principles. The resolution of this issue resulted in a drop in the estimates of sales of services through insurance affiliates for 2001–2002. Incorporation of new data also contributed to the downward revision to sales of services by U.S. affiliates in 2002. The use of foreign accounting standards resulted in elevated sales levels for years prior to 2002, which were not revised.

**Revision policy.** BEA prepares one preliminary estimate and one revised estimate of the operations of multinational companies, including their sales of services. The preliminary estimate is usually released about 20 months after the end of the reference year, and the revised estimate is usually released about a year later.

Thus, when the financial accounting rules used by respondents for reporting their data change, BEA's estimates for the most recent year (and perhaps its estimates for the immediately preceding year) will reflect the new accounting rules, but its estimates for earlier years will not. In addition, when BEA identifies and corrects reporting errors and when it improves survey coverage, the estimates for these 2 years will be improved, but not those for earlier years.

When BEA becomes aware of the presence of a factor that affects sales of services by multinational companies, the factor will be described in the article. Whenever possible, BEA will also provide information on the effect of the factor on the time series presented.

BEA has adopted this policy largely for practical reasons. When financial accounting rules change, multinational companies often will not have estimates of the effect of the new rule on data for earlier years, and BEA has no reliable means of revising the data if its survey respondents do not provide this information. In addition, errors, omissions, and changes in financial accounting rules that substantially affect the historical time series rarely occur.

The second section presents preliminary estimates of sales of services through nonbank majority-owned affiliates of multinational companies for 2003 and revised estimates for 2002; these sales represent international sales of services through the channel of direct investment (see the box "Channels of Delivery of

#### New Data on Insurance, Wholesale and Retail Trade, and Banking Services Sold Through Affiliates

As part of its continuing efforts to improve the data on sales of services through affiliates, the Bureau of Economic Analysis (BEA) collected several new data items in the 2002 benchmark survey of foreign direct investment in the United States (FDIUS) that will provide the basis for improved estimates of insurance services, of the distributive services of wholesalers and retailers, and of banking services provided by majority-owned U.S. affiliates. BEA also included these data items in the 2004 benchmark survey of U.S. direct investment abroad (USDIA), which is currently being processed. In addition, the data items for insurance and wholesale and retail trade are included on the follow-on annual surveys of FDIUS and will be included on the annual surveys of USDIA.

The improved estimates of insurance, distributive, and banking services and the methodologies used to prepare them will be presented in an article in the Survey of Current Business.

The data that have been collected are used here to provide an early indication of how the improved estimates will affect the estimates of insurance, wholesale and retail trade, and banking services sold through U.S. affiliates.

Insurance. Currently, the estimates of sales of insurance services through U.S. affiliates represent revenues generated by affiliates' operations in the insurance industry. These estimates mainly consist of premiums earned with no deduction for losses. In contrast, cross-border trade in insurance services is measured as premiums earned, premium supplements (investment income earned on technical reserves), and auxiliary insurance services less "normal" losses (see the box "Types of Cross-Border Services: Coverage and Definitions" on page 38 for more detail). Including premium supplements raises the value of cross-border receipts and payments for insurance services relative to sales through affiliates, but this rise is more than offset by the lack of deductions for losses from the sales of services through insurance affiliates.

The preliminary results for the companies that reported the data on premiums earned and claims paid indicate that premiums account for the majority of sales in insurance—for 83 percent of sales in 2002 and for 65 percent in 2003. Claims paid were 69 percent of premiums in both 2002 and 2003. Thus, the deduction of a measure of losses would result in a substantial reduction in the measure of sales of services by affiliates with insurance operations. This deduction would be partly offset by the possible inclusion of an estimate of the premium supplement for these affiliates.

However, deducting these losses would not affect auxiliary insurance services, such as claims adjustment or actuarial services. In addition, sales of services in secondary, noninsurance industries by affiliates classified in insurance would be unaffected.

Wholesale and retail trade. The wholesale and retail trade

industries provide distributive services—selling, or arranging for the sale of, goods to intermediate and final users. In BEA's data on sales through affiliates, the value of distributive services provided by affiliates' wholesale and retail trade operations is excluded because it is embedded in the value of the goods sold through affiliates. In the national income and product accounts and in BEA's industry accounts, distributive services in wholesale and retail trade are measured as trade margins—wholesale or retail sales of goods less the cost of the goods resold.

To provide a basis for the estimation of the value of the distributive services of affiliates, BEA collected data on the cost of goods purchased for resale and on the inventories of these goods. The preliminary results from the firms that reported the data indicate that distributive services accounted for 21 cents of every dollar of goods sold by wholesale and retail trade operations in 2002 and for 17 cents of every dollar of goods sold in 2003. The sales of goods by wholesale and retail trade operations were \$699 billion in 2002 and \$736 billion in 2003, so including distributive services in the estimates of sales of services through affiliates would substantially raise the estimates.<sup>1</sup>

**Banks.** Currently, the estimates of sales of services through affiliates exclude services provided by bank affiliates. BEA collects only limited data on sales through bank affiliates because most of the information on bank affiliates that is needed for policymaking is already collected by other U.S. Government agencies. However, the absence of estimates of services provided through bank affiliates causes a potentially significant gap in the coverage of sales of financial services through affiliates. To close this gap, BEA collected new data items on sales of services through bank affiliates in the 2002 benchmark survey of FDIUS.

Specifically, BEA collected data on explicit commissions and fees charged for services. In 2002, U.S. bank affiliates reported \$14.1 billion in services sold to U.S. residents.

In addition to explicit fees and commission, banks may charge implicitly for services that they provide by paying lower interest rates to those who lend them money in the form of deposits and loans than they charge to those who borrow from them. The resulting net receipts of interest are used to defray expenses and provide an operating surplus. BEA collected data on the total interest paid and total interest received by U.S. bank affiliates to provide a basis for imputing the value of services provided without an explicit charge. In 2002, majority-owned U.S. bank affiliates received \$100.6 billion in interest and paid \$78.5 billion in interest in 2002.

<sup>1.</sup> The estimates of cross-border trade in services do not include estimates of the distributive services provided by wholesalers and retailers who arrange for the exports or imports of goods because those services are included in the value of trade in goods. See the appendix "New Data and Other Improvements to the Estimates of Cross-Border Trade in Services."

Services Sold in International Markets" on this page).<sup>4</sup> The estimates of affiliates' sales of services are drawn from larger data sets on the operations of U.S. multinational companies and of U.S. affiliates of foreign companies, which are described in annual articles.<sup>5</sup>

In addition, the appendix "New Data and Other Improvements to the Estimates of Cross-Border Trade in Services" discusses BEA's recent improvements in data collection and methodology to the data on cross-border trade. The box "New Data on Insurance, Wholesale and Retail Trade, and Banking Services Sold through Affiliates" discusses new data items that BEA has recently begun to collect. The box "Revisions to the Estimates of International Services" discusses revisions to the estimates of cross-border trade and of sales through affiliates.

#### U.S. Cross-Border Trade in 2004

U.S. exports of private services (receipts) increased 11 percent, to \$323.4 billion, in 2004 after a 4-percent increase in 2003. U.S. imports of private services (payments) increased 15 percent, to \$258.1 billion, in 2004 after a 7-percent increase in 2003. For both exports and imports of private services, growth increased substantially in 2004. The step-up in exports in 2004 was strongly influenced by accelerating economic growth in major trading partners of the United States and by changes in the value of the dollar, which depreciated sharply in 2004 after depreciating in 2003. The step-up in imports was influenced by stronger economic growth in the United States.

Rates of growth in real gross domestic product (GDP) in several key partner countries accelerated, but these growth rates fell short of the strong economic growth in the United States in 2004. In the United States, real GDP grew 4.2 percent in 2004, up from 2.7 percent in 2003. In the United Kingdom, real GDP grew 3.2 percent in 2004, up from 2.5 percent in 2003; in the euro area, it grew 2.1 percent, up from 0.7 percent; in Canada, it grew 2.8 percent, up from 2.0 percent; and, in Japan, it grew 2.7 percent in 2004, up

#### **Channels of Delivery of Services Sold in International Markets**

Services are sold in international markets through two distinct channels. In the first channel, the residents of one country sell services to the residents of another country. These transactions—cross-border trade—include both trade within multinational companies (intrafirm trade) and trade between unaffiliated parties.¹ They are recorded in the international transactions accounts of both countries—as exports of services by the seller's country and as imports of services by the buyer's country.

The second channel of delivery is sales through foreign affiliates of multinational companies, which from the U.S. viewpoint, are sales to foreigners by foreign affiliates of U.S. companies and sales to U.S. residents by the U.S. affiliates of foreign companies. These sales are not considered U.S. international transactions, because under the residency principle of balance-of-payments accounting, affiliates of multinational companies are regarded as residents of the countries where they are located rather than of the countries of their owners. Thus, sales abroad by foreign affiliates are transactions between foreign residents, and sales in the United States by U.S. affiliates are transactions between U.S. residents. (However, the direct

investors' shares of the profits earned on these sales are recorded as U.S. international transactions.) To obtain a complete picture of the services transactions of affiliates, it would be necessary to examine not only their sales of services but also their purchases of services, both in their countries of location and elsewhere. However, the only available data on their purchases of services are those that are discussed in the section on cross-border trade.

The two channels of delivery typically differ in their effects on an economy. For example, U.S. cross-border exports usually have a greater effect on the U.S. economy than the equivalent sales through foreign affiliates, because most, or all, of the income generated by the production generally accrues to U.S.-supplied labor and capital. In contrast, for sales through foreign affiliates, only the U.S. parent company's share in profits accrues to the United States (and is recorded as a U.S. international transaction); the other income generated by production—including compensation of employees—typically accrues to foreigners.

Some services can be delivered equally well through either channel, but the type of service often determines the channel of delivery. For example, many travel services are inherently delivered through the cross-border channel, but many business, professional, and technical services are mainly delivered through the affiliate channel because of the need for close, continuing contact between the service providers and their customers.

<sup>4.</sup> These data cover *all* the sales of services by nonbank majority-owned affiliates, irrespective of the percentage of ownership. The data are limited to nonbank affiliates because bank affiliates were not required to report annual data on sales of services to the Bureau of Economic Analysis.

<sup>5.</sup> See Raymond J. Mataloni, Jr., "U.S. Multinational Companies: Operations in 2003," SURVEY OF CURRENT BUSINESS 85 (July 2005): 9–29, and William J. Zeile, "U.S. Affiliates of Foreign Companies: Operations in 2003," SURVEY 85 (August 2005): 198–214.

<sup>1.</sup> The term "cross-border trade" differs from the term "cross-border mode of supply" that is used in the General Agreement on Trade in Services to refer to the provision of a service by a resident of one country to a resident of another country without either the producer or the consumer traveling to the country of the other (for example, a consultant sending a report electronically or by mail).

from 1.4 percent.

U.S. cross-border trade in services was also affected by changes in the foreign-currency value of the dollar. In 2004, the dollar depreciated 11 percent against the British pound, 9 percent against the euro, and 7 percent against the Canadian dollar and the Japanese yen. Since 2002, the dollar has depreciated 24 percent against the euro, 18 percent against the British pound, 17 percent against the Canadian dollar, and 14 percent against the Japanese yen.<sup>6</sup>

The sizable increase in total exports of private services in 2004 was mostly accounted for by increases in travel, in "other private services" (especially business, professional, and technical services), and in financial services (table C). The sizable increase in total imports of private services was mostly accounted for by increases in travel and in "other transportation."

Europe and Asia together accounted for two-thirds of total U.S. cross-border exports and imports of private services in 2004 (chart 4). The shares by area were virtually unchanged from those in 2003. Japan, the United Kingdom, Canada, and Mexico continue to be the largest services trading partners of the United States (table D).

Trade within multinational companies (affiliated trade) accounted for \$85.8 billion, or 26 percent, of total exports of private services in 2004 and for \$54.7 billion, or 21 percent, of total imports of private services (table E, page 33). Affiliated exports of private services increased 7 percent in 2004 after a 9-percent increase

6. Annual exchange rates are period averages.

in 2003. Affiliated imports of private services increased 13 percent in 2004 after an 8-percent increase in 2003.

Cross-border trade in private services in the U.S. international transactions accounts consists of travel, passenger fares, "other transportation," royalties and license fees, and "other private services."

#### **Travel**

Receipts. Travel receipts increased 16 percent, to \$74.5 billion, in 2004 after a 3-percent decrease in 2003. The increase was attributable to accelerating economic growth abroad and to the depreciation of the U.S. dollar; travel accounted for more of the dollar increase in U.S. exports of private services than any other component. The increase marks a turnaround from 3 years of declines since the peak in 2000 that were largely in response to the September 11<sup>th</sup> attacks in 2001, fears about terrorism, and concerns about the start of the war in Iraq and severe acute respiratory syndrome (SARS) in early 2003. The turnaround began in the last half of 2003, when travel receipts increased 13 percent in the third quarter and 11 percent in the fourth quarter.

Travel receipts from overseas (excluding Canada and Mexico) increased 16 percent in 2004 after decreasing 5 percent in 2003. Visitors from overseas increased 13 percent in 2004 after falling 6 percent in 2003. The number of visitors from Europe increased 9 percent, and the number of visitors from Asia increased 16 percent primarily because of an 18-percent increase in the number from Japan.

Travel receipts from Canada increased 16 percent in

Asia and Pacific (23%)

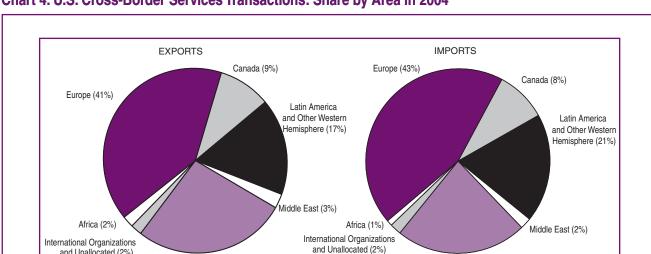

Chart 4. U.S. Cross-Border Services Transactions: Share by Area in 2004

Asia and Pacific (27%)

U.S. Bureau of Economic Analysis

2004 after increasing 9 percent in 2003, spurred by a strong Canadian economy and a 7-percent depreciation of the U.S. dollar against the Canadian dollar. For the past several years, four out of five Canadian visitors have traveled to the United States by automobile rather than by air. In 2004, Canadian visitors arriving by air increased 10 percent, and those arriving by auto increased 5 percent. Although air travelers accounted for a relatively small share of total travelers, they largely accounted for the increase in receipts in 2004 because of their longer stay.

Travel receipts from Mexico increased 10 percent in 2004 after increasing 2 percent in 2003. Most of the increase was due to receipts from visitors to the border area. A record number of Mexicans visited the United States in 2004; the number of visitors to the interior of the United States increased 12 percent, and the number of visitors to the border area increased 4 percent. Although almost 95 percent of Mexican travelers to the United States visited only the border area, receipts in the border area accounted for only 65 percent of travel receipts from Mexico.

**Payments.** Travel payments increased 14 percent, to \$65.6 billion, in 2004 after a 2-percent decrease in 2003. The increase reflected the pickup in U.S. economic growth in 2004. Like the increase in travel receipts, the increase in payments in 2004 marks a turnaround from 3 years of annual declines since the peak in 2000. The turnaround began in the last half of 2003, when travel payments increased 13 percent in the

third quarter and 5 percent in the fourth quarter. Travel payments had been dampened by the combined effects of September 11<sup>th</sup>, the start of the war in Iraq, and SARS, which disrupted travel from 2001 to 2003.

Travel payments to overseas countries (excluding Canada and Mexico) increased 15 percent in 2004 after decreasing 4 percent in 2003. The number of U.S. travelers to Europe increased 10 percent in 2004 after increasing 3 percent in 2003. The number of U.S. travelers to Asia increased 25 percent after an 11-percent decrease. U.S. travelers spent considerably more money in Japan than in any other country in Asia, but travel payments to Hong Kong, China, and India each increased more than 50 percent in 2004; travel payments to China now rank second in payments to Asia and the Pacific, having surpassed payments to Australia

Travel payments to Canada increased 13 percent in 2004 after decreasing 2 percent in 2003. The average expenditure of U.S. visitors to Canada increased 15 percent in 2004, partly reflecting the depreciation of the U.S. dollar. Like Canadian visitors to the United States, most U.S. travelers to Canada (four out of five) traveled by automobile rather than by air. Auto travelers account for most travel payments, but U.S. travelers by air typically spend more because of their longer stay. An 11-percent increase in travelers by air accounted for most of the increase in payments. The number of travelers by auto decreased 5 percent in 2004, a smaller decrease than the 14-percent decrease in 2003, which was

<sup>1.</sup> Ranked by dollar value of total exports or imports.

especially sharp. In 2003, the SARS outbreak in Toronto, which is within driving distance of many major U.S. cities, affected travel by auto more than travel by air.

Travel payments to Mexico increased 13 percent in 2004 after increasing 7 percent in 2003. U.S. travel payments to the border area of Mexico increased 8 percent; U.S. travel payments to the interior of Mexico increased 15 percent. Because border area visits are typically day trips and trips to the Mexican interior are

often longer and involve overnight stays, a relatively small increase in the number of visitors to the interior creates a relatively large increase in travel payments.

#### Passenger fares

**Receipts.** Receipts for passenger fares increased 20 percent, to \$18.9 billion, in 2004 after an 8-percent decrease in 2003. The increase reflected a 13-percent increase in the number of visitors to the United States from overseas, an increase in the share of passengers

Legual to "affiliated other transportation" in table 1.
 Equal to "affiliated oryalties and license fees" in table 1.
 Equal to "affiliated other private services" in table 1.
 Includes affiliated telecommunications and insurance transactions; see footnotes 4 and 5 in table 1.

Prior to 2001, management and consulting services were included in "other" services. Beginning in 2001, data on management and consulting services were collected as a separate type of service.
 Prior to 2001, research and development and testing services were included in "other" services. Beginning

in 2001, data on research and development and testing services were collected as a separate type of service. In 2UU, usua on research and development and testing services were collected as a separate type of service. 7. In addition to transactions with its foreign parent, a U.S. affiliate's receipts and payments include transactions with other members of its foreign parent group. The foreign parent group is defined as (1) the foreign parent, (2) any foreign person, proceeding up the foreign parent's ownership chain, that owns more than 50 percent of the foreign person below it, up to and including the ultimate beneficial owner, and (3) any foreign person, proceeding down the ownership chain(s) of each of these members, that is owned more than 50 percent by the person above it.

on U.S.-flag carriers, and an increase in airline ticket prices due to higher fuel costs. The increase in the number of visitors from overseas was driven by the same factors that affected travel—accelerated economic growth abroad and the absence of major disruptions to travel. Most of the increase in receipts was accounted for by passenger fare receipts from Europe, particularly from the United Kingdom. Receipts from Asia also increased significantly, particularly receipts from Japan. This increase reflected both an increase in airline ticket prices due to higher fuel costs and recovery from the effects of SARS on the number of travelers from Asia. The effect of higher fuel prices on passenger fares was greater on Asian-Pacific routes than on Atlantic routes due to the longer distances and resulting higher fuel consumption for trans-Pacific flights. Like the increase in travel receipts, the increase in passenger fare receipts in 2004 marks a turnaround from 3 years of annual declines since 2000.

**Payments.** Payments for passenger fares increased 13 percent, to \$23.7 billion, in 2004 after a 5-percent increase in 2003. The increase in 2004 reflected a 12-percent increase in the number of U.S. visitors overseas and an increase in airline ticket prices due to higher fuel costs; the share of U.S. travelers on foreign-

flag carriers changed little. After peaking in 2000, passenger fare payments fell in 2001 and 2002 and then partly recovered in 2003. In 2004, passenger fare payments almost regained their 2000 level.

# Other transportation

Receipts. Receipts for "other transportation" services increased 18 percent, to \$36.9 billion, in 2004 after a 7-percent increase in 2003. Both freight receipts and port services receipts increased, reflecting increases in the volume of both imports and exports (the volume of exports increased 9 percent in 2004 after increasing 2 percent in 2003, and the volume of imports increased 11 percent after increasing 5 percent). The increase in freight receipts reflected an increase in ocean freight rates, particularly freight rates for U.S.-operated tramp and tanker vessels.

The increase in port services receipts reflected the stepped-up volume of exports and imports, a 13-percent increase in the number of foreign visitors from overseas to the United States, and a 28-percent increase in jet fuel prices.

By area, much of the increase in receipts for "other transportation" services was from Europe, mainly from the United Kingdom, Germany, and France.

# **Delivery of Computer Services to Foreign Markets**

The delivery of computer-related services and of many other types of services may be further divided within the two major channels of cross-border trade and sales through affiliates. As a result, the total value of these services may be scattered across several categories of cross-border trade and sales by affiliates in the tables. In addition, some computer-related services may be embedded in goods that are exported to foreign markets, or they may be delivered in ways that result in entries in the U.S. international transactions accounts under income rather than under trade in goods and services.

Cross-border receipts from unaffiliated foreigners for "computer and data processing services" and "database and other information services" are shown under "business, professional, and technical services" in table 1.¹ Computer-related services that are delivered to foreign markets through cross-border software-licensing agreements, such as on site licenses are shown under "royalties and license fees."² More specifically, receipts through agreements with unaffiliated foreign persons are shown in "general-use computer software" in table 4. Receipts through agreements with affiliated foreigner persons

(intrafirm trade) are included in affiliated royalty and license fee transactions in table 1, but their value cannot be separately identified. Intrafirm receipts of computer and information services, which consist of computer and data processing services and of database and other information services, are shown in table 1 and table E.

The wages of U.S. residents who provide computer services to nonresidents are included in "compensation receipts" in the international transactions accounts (ITAs) (table 1, line 17), but their value cannot be separately identified. Compensation covers the earnings of U.S. individuals who are employees of nonresident firms and the earnings of certain independent individuals who provide services to nonresidents; it is classified in the ITAs as "income" rather than in services. If a U.S. resident goes abroad to provide these services, the length of stay must be less than 1 year; otherwise, the individual is considered a foreign resident.

Sales of computer-related services to foreign residents through foreign affiliates exceeded cross-border exports of these services in 2003, reflecting the advantages of a local presence when delivering these services to foreign customers (table 10.2). The available data on sales through affiliates are classified by the primary industry of the affiliate rather than by type of service, but computer-related services may also be sold through affiliates in several other industries, particularly machinery manufacturing and wholesale trade.

<sup>1.</sup> For detailed estimates of receipts for these services by country and by area, see table 7.

<sup>2.</sup> Receipts and payments for general-use software that is packaged and physically shipped to or from the United States are included in trade in goods. The value of software that is preinstalled on computer equipment and peripherals is captured in the value of this hardware and thus is also included in trade in goods.

However, receipts from Japan, China, and other countries in Asia also increased substantially. The increases reflected higher trade volumes with these countries.

Payments. Payments for "other transportation" services increased 21 percent, to \$54.2 billion, in 2004 after a 16-percent increase in 2003. The increase in 2004 primarily reflected an increase in ocean freight payments, which resulted from increases in the volume of imports and in ocean freight rates. West Coast ports reported record volumes on liner vessels from July through November when imports from Asia surged. Moreover, carriers negotiated large rate increases with shippers early in the year on the basis of forecasts of continued strong import volumes.

Payments for port services also increased. Payments for air port services increased as a result of a 28-percent increase in jet fuel prices, an 8-percent increase in the volume of goods exports transported by U.S. air carriers, and a 12-percent increase in the number of U.S. travelers overseas; the increase in these payments was slightly offset by a decrease in payments for ocean port services.

By area, most of the increase in "other transportation" payments was accounted for by payments to Asia. Payments to Japan and China increased significantly, reflecting increased export and import volume with these countries. Payments to Europe also contributed, reflecting large increases in payments to Germany, the United Kingdom, and Norway.

#### Royalties and license fees

Receipts. U.S. receipts of royalties and license fees increased 9 percent, to \$52.6 billion, in 2004 after an 8-percent increase in 2003. Most of the increase was accounted for by U.S. parents' receipts from their foreign affiliates; affiliated receipts accounted for nearly 75 percent of receipts for royalties and license fees in 2004, about the same share as in other recent years. Affiliated transactions in royalties and license fees tend to predominate; firms with marketable intellectual property usually prefer to exercise some degree of control over the distribution of this property because it may be instrumental to the firm's competitive position in the global market.<sup>7</sup> Of these affiliated receipts, 90 percent were accounted for by U.S. parents' receipts from their foreign affiliates and 85 percent of affiliated payments were accounted for by U.S. affiliates' payments to their foreign parents. The size of these shares reflects the fact that within multinational firms, the parent companies

rather than the affiliates are generally the holders of intellectual property. U.S. parents' receipts from their foreign affiliates increased 8 percent in 2004, mostly from affiliates in information services and transportation equipment manufacturing.

U.S. companies' receipts from unaffiliated foreign companies increased 11 percent, to \$13.6 billion in 2004. The increase was mostly accounted for by receipts for the use of industrial processes, including patents and trade secrets, which are used in connection with the production of goods. The increase was also attributable to receipts for trademarks—the rights to use products under a particular trademark, brand name, or signature. Unaffiliated receipts for the rights to distribute and use general-use computer software changed little in 2004 after decreasing in 2003. Additional receipts from software licensing agreements were transacted through affiliated channels, but the value of these receipts cannot be separately identified (see the "Delivery of Computer Services to Foreign Markets").

Payments. U.S. payments for royalties and license fees increased 23 percent, to \$23.9 billion, in 2004 after remaining nearly flat in 2003. Affiliated payments for royalties and license fees accounted for most U.S. payments in 2004. Of this affiliated trade, 85 percent was accounted for by U.S. affiliates' payments to their foreign parents, a share that has been increasing since 2001 after decreasing throughout the 1990s. U.S. affiliates' payments increased 22 percent. Much of the increase was attributable to payments by affiliates in manufacturing, particularly in chemicals (including drug companies) and petroleum, in information services, and in wholesale trade, mainly to foreign parents in the United Kingdom, the Netherlands, and Germany.

U.S. companies' payments of royalties and license fees to unaffiliated foreigners tend to spike in years that include major international sporting events, as U.S. companies pay international sports organizations for the rights to broadcast and record the live events and for the rights to use logos and other trademarks associated with the events. The latest such spike occurred in 2004—an Olympic year.

# Other private services

Receipts for "other private services" increased 6 percent, to \$140.5 billion, in 2004 after an 8-percent increase in 2003. The largest dollar increases were in financial services and in "other business, professional, and technical services" (table 1 and tables 5–8). Payments for "other private services" increased 10 percent, to \$90.7 billion, after a 13-percent increase. The largest dollar increases were in insurance services, "other

<sup>7.</sup> Lee Bransetter, Raymond Fisman, and C. Fritz Foley "Do Stronger Intellectual Property Rights Increase International Technology Transfer? Empirical Evidence from U.S. Firm-Level Data" (National Bureau of Economic Research working paper no. 11516, July 2005); <papers.nber.org/papers/w11516.pdf>.

business, professional, and technical services," and financial services (table 1). "Other private services" consists of education, financial services, insurance services, telecommunications services, and business, professional, and technical services.

#### **Education**

**Receipts.** Receipts for education increased 2 percent, to \$13.5 billion, in 2004 after a 5-percent increase in 2003. The increase in 2004 resulted from higher tuition rates: Tuition rates at U.S. public colleges and universities increased 14 percent in academic year 2003–2004, tuition rates at U.S. private colleges and universities increased 6 percent, and tuition rates at U.S. 2-year colleges increased 14 percent.8 These higher rates were partly offset by a 2.4-percent decrease in the number of foreign students enrolled in U.S. higher education institutions in 2004 after a small increase in 2003. Most of the decrease was attributable to a 5-percent decrease in the number of undergraduate students; the number of graduate students increased 2.5 percent. The decrease in foreign students resulted from real and perceived difficulties in obtaining student visas, rising U.S. tuition rates, less expensive educational opportunities abroad, and recruitment activities by colleges and universities in other English-speaking nations.9

India continues as the top source of foreign students. The number of students from India increased 7 percent in 2004, to nearly 80,000; the increase partly offset drops in students from other countries. The number of students from China, the second largest source of students, fell 5 percent, to 62,000. The number of students from other Asian countries, Europe, and the Middle East also fell. The decrease in the number of students from the Middle East was not as sharp as in 2003, but the number of students from most countries with majority Muslim populations—such as

Saudi Arabia, Kuwait, and Jordan—decreased 15 to 17 percent. Beginning in 2002, the number of students from majority Muslim countries has decreased at an average annual rate of 10 percent.

Payments. Payments for education increased 11 percent, to \$3.5 billion, in 2004 after an 18-percent increase in 2003. More U.S. students are studying abroad, but for shorter periods; more than 50 percent of U.S. students who study abroad select summer, January term, and other programs of 8 weeks or less. 10 Education payments by U.S. students enrolled in degree programs in Canada, the United Kingdom, and Australia—the top destinations for foreign study—increased 10 percent in 2004.

# Financial services

**Receipts.** Financial services receipts increased 13 percent, to \$27.4 billion, in 2004 after a 10-percent increase in 2003. The increase in 2004 was almost entirely due to an increase in unaffiliated receipts, which rose in all major categories (table F). Brokerage commissions were higher as foreigners increased their trading in outstanding U.S. bonds; trading in U.S. stocks changed little. Private placement and underwriting services were virtually unchanged, as new issues of stocks and bonds in the United States were flat. Fees for financial advisory services changed little, while fees for financial management services benefited from strong performance by managers and strong increases in the value of assets under management. Credit card and other credit-related services increased, as the volume of credit card transactions continued to increase. "Other financial services" receipts increased because of gains in fees for securities lending, electronic funds transfers, and all other financial services.

Payments. Financial services payments increased 14 percent, to \$11.2 billion, in 2004 after a 13-percent increase in 2003. The increase in 2004 resulted from increases in both unaffiliated payments, up 17 percent, and affiliated payments, up 11 percent. The increase in

<sup>3.</sup> Includes securities lending, electronic funds transfer, and other financial services.

unaffiliated payments was attributable to increases across all major categories (table F). Brokerage commissions rose as U.S. investors increased their trading in foreign stocks, and private placement and underwriting services rose because of increased levels of U.S. securities issued abroad. Management and financial advisory services both increased. Credit card and other credit-related services increased as credit card companies expanded their networks abroad. "Other financial services" payments increased because of gains in securities lending, electronic funds transfers, and other financial services.

#### Insurance

**Receipts.** Insurance services receipts increased 4 percent, to \$6.1 billion, in 2004 after a 32-percent increase in 2003. In 2004, an increase in receipts for primary insurance was partly offset by a decrease in receipts for reinsurance. In 2003 and the several preceding years, receipts for both primary insurance and for reinsurance increased.

Payments. Insurance services payments increased 13 percent, to \$29.9 billion, in 2004 after a 20-percent increase in 2003. The increase was more than attributable to an increase in payments for reinsurance services. The increase in reinsurance payments reflected an increase in premium rates and an increase in the amount of insurance ceded to foreign reinsurance companies. Premiums paid have accelerated since 2000 because the volume of reinsurance purchased from abroad has increased and reinsurers have raised premiums rates, partly to recoup investment losses from the downturn in bond and stock markets in 2000 and catastrophic property-casualty losses, including those stemming from the September 11th 2001, attacks.

The increase in reinsurance payments contributed significantly to the increase in the deficit in insurance transactions in 2004 and was a major factor in the continued decline in the surplus in total private services.

#### **Telecommunications**

Receipts. Receipts for telecommunications services decreased 3 percent, to \$4.4 billion, in 2004 after a 16-percent increase in 2003. Cross-border trade in telecommunications services is partly conducted under a system in which telecommunications carriers negotiate bilateral fees for carrying and terminating international traffic. The decrease in receipts for telecommunications services in 2004 is partly due to the growing use of call completion methods that circumvent the traditional system by routing international traffic over leased lines that are attached to lowcost public networks; increased use of Internet telephony (known as "Voice-over-Internet-Protocol") also contributed. In addition, efforts by many U.S. carriers to route traffic to networks that they own have also reduced the use of the traditional international settlement system.11

Payments. Payments for telecommunications services increased 2 percent, to \$4.4 billion, in 2004 after a 1-percent increase in 2003. Payments for telecommunications services have been affected by increased call volume and by higher calling rates for calls that terminate on foreign mobile networks, which are generally more expensive than calls that terminate on foreign fixed-line networks. Reflecting higher connection fees for mobile phones than for fixed-line communica-

### **Data Sources**

The estimates in this article are primarily based on data from the surveys that are conducted by the Bureau of Economic Analysis (BEA), but the estimates of some services are based on data from a variety of other sources, including U.S. Customs and Border Protection, surveys conducted by other Federal Government agencies, private sources, and partner countries.

BEA conducts several mandatory surveys of services; some surveys are targeted to specific services industries and for intrafirm transactions, to specific types of investment. These surveys of services are available on BEA's Web site at <www.bea.gov/bea/surveys>.

The data on intrafirm trade in services and on sales by majority-owned affiliates are collected in BEA's surveys of U.S. direct investment abroad and of foreign direct investment in the United States. For the methodologies for these surveys, see Foreign Direct Investment in the United States: Final Results From the 1997 Benchmark Survey and U.S. Direct Investment Abroad: Final Results From the 1999 Benchmark Survey. For additional information on the methodology used to prepare the estimates of both affiliated and unaffiliated cross-border trade, see The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures. These publications and other detailed information on the changes in the methodology since 1990 can be accessed on BEA's Web site at <www.bea.gov/bea/mp\_international.htm>.

For a summary of the changes since 1990, see "Improvements to BEA's Estimates of U.S. International Services, 1990–2003," in Borga and Mann, Survey 83 (October 2003): 74–76. The Survey articles for 1994–2004 are available at <www.bea.gov/bea/pubs.htm>.

<sup>11.</sup> Recent Trends in U.S. Services Trade: 2004 Annual Report (U.S. International Trade Commission, June 2004): 10–1 and 10–2.

tions, the increase in mobile calling volume has contributed to the increase in telecommunications payments in 2004. The decrease in calling rates for fixed-line communications dampened the increase in telecommunications payments.

### Business, professional, and technical services

Business, professional, and technical (BPT) services receipts increased 7 percent, to \$71.0 billion, in 2004 after a 7-percent increase in 2003. BPT services consists of five major categories: Computer and information services; management and consulting services; research, development and testing services; operational leasing services; and "other BPT services." Both affiliated and unaffiliated BPT receipts increased in 2004; most of the increase was attributable to "other BPT services."

**Receipts.** Receipts for *computer and information services* were flat, at \$8.5 billion, in 2004. An increase in unaffiliated receipts was offset by a decrease in affiliated receipts. Receipts for *management and consulting* 

services also were flat, at \$4.5 billion. Both unaffiliated receipts and affiliated receipts were virtually unchanged. Receipts for research, development, and testing services increased 12 percent, to \$9.8 billion. Most of the increase in receipts was attributable to affiliated transactions, which account for 90 percent of research, development, and testing services receipts. (Like for royalties and license fees, affiliated transactions account for most research, development, and testing services, because companies prefer to maintain control over intellectual property.) Receipts for operational leasing services increased 4 percent, to \$8.2 billion as a result of an increase in affiliated receipts.<sup>12</sup>

Receipts for "other BPT services" increased 8 percent, to \$40.0 billion, in 2004. "Other BPT services" include a variety of services that are not recorded in other categories of BPT services and other costs that

# Types of Cross-Border Services: Coverage and Definitions—Continues

The estimates of cross-border transactions cover both affiliated and unaffiliated transactions between U.S. residents and foreign residents. Affiliated transactions consist of intrafirm trade within multinational companies—specifically, the trade between U.S. parent companies and their foreign affiliates and the trade between U.S. affiliates and their foreign parent groups. Unaffiliated transactions are with foreigners that neither own, nor are owned by, the U.S. party to the transaction.

Cross-border trade in private services is classified in the same five broad categories that are used in the U.S. international transactions accounts—travel, passenger fares, "other transportation," royalties and license fees, and "other private services."

**Travel.** These accounts cover purchases of goods and services by U.S. persons traveling abroad and by foreign travelers in the United States for business or personal reasons. These goods and services include food, lodging, recreation, gifts, entertainment, local transportation in the country of travel, and other items incidental to a foreign visit. U.S. travel transactions with both Canada and Mexico include border transactions, such as day trips for shopping and sightseeing.

A "traveler" is a person who stays less than a year in a country and is not a resident of that country. Diplomats and military and civilian government personnel are excluded regardless of their length of stay; their expenditures are included in other international transactions accounts. Students' educational expenditures and living expenses and medical patients' expenditures for medical care are included in "other private services."

Passenger fares. These accounts cover the fares

received by U.S. air carriers from foreign residents for travel between the United States and foreign countries and between two foreign points, the fares received by U.S. vessel operators for travel on cruise vessels, and the fares paid by U.S. residents to foreign air carriers for travel between the United States and foreign countries and to foreign vessel operators for travel on cruise vessels.

"Other transportation." These accounts cover U.S. international transactions arising from the transportation of goods by ocean, air, land (truck and rail), pipeline, and inland waterway carriers to and from the United States and between two foreign points. The accounts cover freight charges for transporting exports and imports of goods and expenses that transportation companies incur in U.S. and foreign ports. Freight charges cover the receipts of U.S. carriers for transporting U.S. exports of goods and for transporting goods between two foreign points and the payments to foreign carriers for transporting U.S. imports of goods. (Freight insurance on goods exports and imports is included in insurance in the "other private services" accounts.)

Port services consist of the value of the goods and services purchased by foreign carriers in U.S. ports and by U.S. carriers in foreign ports.

Royalties and license fees. These accounts cover transactions with nonresidents that involve patented and unpatented techniques, processes, formulas, and other intangible assets and proprietary rights used in the production of goods; transactions involving trademarks, copyrights, franchises, broadcast rights, and other intangible rights; and the rights to distribute, use, and reproduce general-use computer software.

<sup>12.</sup> This category covers rentals of transportation equipment (such as ships, aircraft, and railcars) without crews or operators; if crews or operators are provided, the transaction is included under "other transportation" services

parent firms charge to their affiliates that are not further disaggregated by type of service. <sup>13</sup> Most of the increase in 2004 was accounted for by unaffiliated receipts, mostly for legal services, other trade-related services, and architectural, engineering and other technical services. Other trade-related services, which include Internet and online sales services, have increased sevenfold since 1999; these services include auction services, which include online auctions and fees for business-to-business exchanges conducted over the Internet.

13. BEA collects and publishes as part of "other BPT services" additional details on transactions with unaffiliated foreign persons that cover more than a dozen types of services (see the addenda to table 1). The costs of research and development services and management services sometimes are separately identified and charged, and when they are, the values are recorded in the categories provided for those services. When they cannot be separately identified and charged, the values are recorded under "other BPT services."

**Payments.** Payments for BPT services increased 9 percent, to \$40.7 billion, in 2004 after a 12-percent increase in 2003. Affiliated payments, which accounted for 70 percent of BPT payments in 2004, increased 8 percent; unaffiliated payments increased 10 percent.

Payments for *computer and information services* increased 2 percent, to \$5.8 billion, in 2004. An increase in affiliated payments was partly offset by a decrease in unaffiliated payments. Payments for *management and consulting services* increased 26 percent, to \$5.0 billion. Payments for *research, development, and testing services* increased 7 percent, to \$4.7 billion. Like for receipts, affiliated trade accounts for most payments for research, development, and testing services, but a \$0.2 billion decrease in affiliated payments was more than offset by a \$0.5 billion increase in unaffiliated payments. Payments for *operational leasing services* increased 44 percent, to \$1.2 billion. Affiliated payments

# Types of Cross-Border Services: Coverage and Definitions

"Other private services." These accounts consist of education; financial services; insurance; telecommunications; business, professional, and technical services; and "other services."

Education consists of expenditures for tuition and living expenses by foreign students enrolled in U.S. colleges and universities and by U.S. students for study abroad. Education excludes fees for distance-learning technologies and for educational and training services provided on a contract or fee basis; these transactions are included in training services in "other business, professional, and technical services" in table 1.

Financial services include funds management and advisory services, credit card services, fees and commissions on transactions in securities, fees paid and received on bond trading, fees on credit-related activities, and other financial services.

Insurance services consist of the portion of premiums remaining after provision for expected or "normal" losses, an imputed premium supplement that represents the investment income of insurance companies on funds that are treated as belonging to policyholders, and auxiliary insurance services. Primary insurance mainly con-

sists of life insurance and property and casualty insurance, and each type may be reinsured.<sup>2</sup>

Telecommunications consists of receipts and payments between U.S. and foreign communications companies for the transmission of messages between the United States and other countries; channel leasing; telex, telegram, and other jointly provided basic services; value-added services, such as electronic mail, video conferencing, and online access services (including Internet backbone services, router services, and broadband access services); and telecommunications support services.

Business, professional, and technical services cover a variety of services, such as legal services, accounting services, and advertising services (see the list in table 1).

"Other services" receipts consist mainly of expenditures (except employee compensation) by foreign governments in the United States for services such as maintaining their embassies and consulates; noncompensation-related expenditures by international organizations, such as the United Nations and the International Monetary Fund, that are headquartered in the United States; expenditures of foreign residents employed temporarily in the United States; and receipts from foreigners for the display, reproduction, or distribution of motion pictures and television programs. "Other services" payments consist primarily of payments by U.S. distributors to foreign residents for the display, reproduction, or distribution of foreign motion pictures and television programs.

<sup>1.</sup> The portion of total premiums required to cover "normal losses" is estimated by BEA on the basis of the relationship between actual losses and premiums averaged over several years. Auxiliary insurance services include agents' commissions, actuarial services, insurance brokering and agency services, and salvage administration services. For a detailed description of the imputed premium supplement, see Christopher L. Bach, "Annual Revision of the U.S. International Transactions Accounts, 1989-2003," SURVEY 84 (July 2004): 60-62. For a description of other components of insurance services, see Christopher L. Bach, "Annual Revision of the U.S. International Transactions Accounts, 1992-2002," SURVEY 83 (July 2003): 35-37.

<sup>2.</sup> Reinsurance is the ceding of a portion of a premium to another insurer who then assumes a corresponding portion of the risk. It provides coverage for events with such a high degree of risk or liability that a single insurer is unwilling or unable to underwrite insurance against their occurrence.

accounted for nearly all of the increase. Payments for "other BPT services" increased 7 percent, to \$24.0 billion. Affiliated payments accounted for most of the increase. Unaffiliated payments also increased, and nearly a third of the increase was attributable to a 27-percent jump in accounting, auditing, and book-keeping services. One reason for the increase may be that in order to comply with the Sarbanes-Oxley Act of 2002—which starting in 2004, requires stricter accounting and auditing standards and increased personal accountability on the part of senior executives for company financial statements—U.S. companies have increasingly sought out independent auditors and accountants abroad, both of which are in short supply domestically.

# Film and television tape rentals

**Receipts.** Receipts for film and television tape rentals increased 3 percent, to \$10.5 billion, in 2004 after a 9-percent increase in 2003. These services cover the rights to display, reproduce, and distribute U.S. motion pictures and television programming abroad.

**Payments.** Payments for film and television tape rentals increased 49 percent, to \$0.3 billion in 2004, after a 53-percent increase in 2003. Unaffiliated payments to Australia accounted for most of the increases in 2004 and in 2003. Although payments have been increasing rapidly, they continue to be only a small fraction of receipts.

# Sales Through Affiliates in 2003

In 2003, the latest year for which data are available, worldwide sales of services by U.S. multinational companies through their nonbank majority-owned foreign affiliates to both foreign and U.S. persons were \$507.5 billion, up 13 percent from sales in 2002 (table G). Worldwide sales by foreign multinational companies through their nonbank majority-owned U.S. affiliates were \$407.9 billion, up 3 percent.

Affiliates' sales of both goods and services are predominantly local transactions. In 2003, local sales—that is, transactions with parties located in the same country as the affiliate—accounted for 78 percent of the worldwide sales of services by foreign affiliates of U.S. companies; local sales accounted for 61 percent of the worldwide sales of goods. The larger share for services reflects the importance of proximity to the customer in the delivery of services. Local sales accounted for 94 percent of worldwide sales of services by U.S. affiliates of foreign companies and for an esti-

mated 91 percent of their worldwide sales of goods, partly reflecting the large U.S. market.<sup>15</sup>

Both the sales of services to foreign persons by foreign affiliates of U.S. companies (that is, their local sales and their sales to other foreign countries) and the sales of services to U.S. persons by U.S. affiliates of foreign companies (that is, their local sales) represent services delivered to international markets through the channel of direct investment. These sales are presented by country of foreign affiliate or by country of the U.S. affiliates' ultimate beneficial owner (UBO) for 1996–2003 in table 9.16 Sales by primary industry of the foreign affiliate cross-classified by country for 2002 and 2003 are presented in tables 10.1 and 10.2. Sales by primary industry of the U.S. affiliate cross-classified by country of UBO for 2002 and 2003 are presented in tables 11.1 and 11.2.

Table G. Sales of Services by U.S. MNCs Through Their Nonbank MOFAs and by Foreign MNCs Through Their Nonbank MOUSAs, 2002–2003

	2002	2003
Sales through MOFAs Total To affiliated persons To unaffiliated persons	<b>448,152</b> 64,213 383,940	<b>507,508</b> 72,471 435.038
To U.S. persons	24,644 19,745 4,898	30,053 23,035 7,018
To foreign persons	423,508 44,467 379,041	477,455 49,436 428,020
Local sales To other foreign affiliates To unaffiliated foreigners	355,262 12,477 342,786	394,353 14,035 380,318
Sales to other countries	68,246 31,991 36,256	83,102 35,401 47,701
Sales through MOUSAs  Total	<b>395,040</b> 367,614 27,426 9,785 3,259 14,382	<b>407,881</b> 381,389 26,492 10,976 1,109 14,407

Nore. Depository institutions are excluded because data are not available. In this table, sales of services through affiliates are those typical of establishments in the following industries derived from the North American Industry Classification System: Utilities; transportation and warehousing; information; finance and insurance; real estate and rental and leasing; professional, scientific, and technical services; management of companies and enterprises; administrative and support, waste management, and remediation services; educational services; bealth care and social assistance; arts, entertainment, and recreation; accommodation and food services; support activities for agriculture and forestry; support activities for agriculture and forestry; support activities

<sup>14.</sup> In this section, sales of services are generally defined as sales of outputs that are intangible; these outputs are typically associated with particular industry sectors, which are listed in the note to table G.

<sup>15.</sup> The local and foreign shares of sales of goods by U.S. affiliates have been estimated from data on exports of goods shipped by affiliates, because the data on these sales are not disaggregated by destination. In 2003, U.S. affiliates' exports represented 9 percent of their total sales of goods.

<sup>16.</sup> The UBO of a U.S. affiliate is that person (in the broad legal sense, including a company), proceeding up the affiliate's ownership chain beginning with the foreign parent, that is not owned more than 50 percent by another person. The UBO ultimately owns or controls the affiliate and derives the benefits associated with ownership or control. Unlike the foreign parent, the UBO of a U.S. affiliate may be located in the United States.

and gas operations; support activities for mining; and other services.

MNCs Multinational companies

MOUSAS Majority-owned U.S. affiliates

# Foreign affiliates' sales to foreign persons

In 2003, sales of services to foreign persons by nonbank majority-owned foreign affiliates of U.S. companies were \$477.5 billion. By area, sales by affiliates in Europe accounted for 56 percent of total sales; affiliates in Asia and Pacific accounted for 22 percent; affiliates in Latin America and Other Western Hemisphere, for 12 percent; and affiliates in Canada, for 9 percent. By country, the United Kingdom accounted for the largest share of sales, followed by Japan, Canada, Germany, and France.

By industry sector, sales of services were largest in "finance (except depository institutions) and insurance," in information, and in professional, scientific, and technical services.<sup>17</sup> In nonbank finance and insurance, the majority of sales were accounted for by affiliates in insurance, and much of the remainder were accounted for by "securities, commodity contracts, and other intermediation and related activities" (securities and commodity brokers and dealers). In information, affiliates in broadcasting and telecommunications had the largest sales, followed by affiliates in publishing industries, and affiliates in information services and data processing services. In professional, scientific, and technical services, affiliates in computer systems design and related services accounted for a large share of total sales of services.

Sales of services abroad by foreign affiliates increased 13 percent in 2003 after increasing 0.4 percent in 2002. Foreign affiliates' sales grew strongly in 2003 despite the modest pickup in economic growth—and in some cases, despite the falloff in growth—in many important markets that the affiliates serve.<sup>18</sup> Increases in affiliates' sales were widespread across industry sectors, and much of the increase was accounted for by existing affiliates. The depreciation of the U.S. dollar contributed to the increased dollar value of affiliates' sales, particularly in Europe. The largest increases were by affiliates in nonbank finance and insurance (particularly insurance) and in information. In insurance, higher premiums in primary and reinsurance markets, particularly for nonlife insurance, led to widespread

increases in sales of services by affiliates.<sup>19</sup> In information, the increase was widespread among subsectors; affiliates in publishing industries, particularly software publishers, accounted for the largest share of the increase. In contrast, sales of services in utilities decreased for the second consecutive year in 2003, as U.S. companies sold off or liquidated their foreign affiliates in energy generation, distribution, and trading activities in order to reduce their debt and to improve their balance sheets following the business failures that disrupted energy trading markets in 2002.

Sales of services abroad by foreign affiliates increased in every major area in 2003. Affiliates in Europe had the largest increase, accounting for 72 percent of the increase in total sales, followed by affiliates in Asia and Pacific and in Latin America and Other Western Hemisphere. Within Europe, the United Kingdom had the largest increase. In the United Kingdom, increases were widespread across several industry sectors; the largest increases were for affiliates in transportation and warehousing, in insurance (except life insurance), in publishing industries, and in motion picture and sound recording industries. In Asia and Pacific, affiliates in Australia had the largest increase in sales, accounting for about 40 percent of the area's increase. In Australia, the largest increases were by securities and commodity brokers and dealers, mostly reflecting new affiliates and acquisitions by existing affiliates. In Latin America and Other Western Hemisphere, affiliates in insurance and in utilities contributed to the increase.

By industry sector, the largest increases in sales of services abroad were by affiliates in "finance (except depository institutions) and insurance" and by affiliates in information. In nonbank finance and insurance, the increase was largely attributable to affiliates with primary activities in insurance (except life insurance) and to securities and commodity brokers and dealers. Increases for the affiliates in insurance (mainly property and casualty insurers) were widespread; the largest increases were by affiliates in the United Kingdom and Japan. An increase by securities and commodity brokers and dealers was attributable to several factors, including increased sales in precious metals trading, acquisitions, and expansion of affiliates' secondary activities in "other financial investment activities and exchanges." In information, most of the increase was accounted for by increases in

<sup>17.</sup> Holding companies (included in "management of companies and enterprises") constitute by far the largest industry in the U.S. direct investment position abroad and account for the largest share of direct investment income. However, this industry accounts for a relatively small share of sales of services by foreign affiliates, because most of the operating revenues of holding companies, which consist largely of income from equity investments, are recorded as investment income and not as sales of services, even though a significant portion of the income in this industry is ultimately attributable to sales of services by affiliates owned by the holding companies (those sales that are recorded in the country and industry of the affiliates being held).

<sup>18.</sup> In 2003, real economic growth picked up in some markets, including the United Kingdom and Japan, while growth slowed or virtually ceased in other markets, such as Canada, France, Germany, the Netherlands, and Switzerland.

<sup>19.</sup> The estimate of sales of services through affiliates in insurance primarily consists of premiums earned, with no deduction for losses, unlike the measurement of insurance services in cross-border trade. For more information on BEA's efforts to address this difference in measurement, see the box "New Data on Insurance, Wholesale and Retail Trade, and Banking Services Sold Through Affiliates."

software publishing, in motion picture and video industries, and in telecommunications by existing affiliates in Europe. Sales of services abroad by affiliates in utilities decreased significantly for the second consecutive year; the decrease was accounted for by affiliates in Canada, the Netherlands, and the United Kingdom, as affiliates were sold or liquidated in 2003.

# U.S. affiliates' sales in the United States

In 2003, sales of services to U.S. persons by nonbank majority-owned U.S. affiliates of foreign companies were \$381.4 billion. By area, affiliates with ultimate beneficial owners (UBOs) in Europe accounted for the largest share of total sales, at 69 percent; Canada accounted for 11 percent; Asia and Pacific, for 10 percent; and Latin America and Other Western Hemisphere, for 9 percent. By country of UBO, the United Kingdom accounted for the largest share of sales, followed by France, Germany, and Canada.

By industry sector, sales of services were largest in "finance (except depository institutions) and insurance" and in information. Affiliates in insurance accounted for over 75 percent of sales in nonbank finance and insurance. In information, affiliates in publishing industries and in telecommunications had the largest shares of sales of services.

Sales of services to U.S. persons by U.S. affiliates of foreign companies increased 4 percent in 2003. The slow growth occurred despite a pickup in growth in the U.S. economy and despite spending by foreign multinational companies to acquire or establish U.S. businesses, which increased for the first time since 2000.<sup>20</sup> Although spending for new investment increased, acquisitions of U.S. companies in 2003 were well below

20. According to data from BEA's survey of new foreign direct investment in the United States (FDIUS), outlays to acquire or to establish U.S. businesses increased from \$54.5 billion in 2002 to \$63.6 billion in 2003; see Thomas W. Anderson, "Foreign Direct Investment in the United States: New Investment in 2004," Survey 85 (June 2005): 30–37. These data cover only transactions involving U.S. businesses that are newly acquired or established by foreign direct investors. For additional information about FDIUS and about operations of both new and existing U.S. affiliates, see Zeile, "U.S. Affiliates of Foreign Companies: Operations in 2003," and Maria Borga and Daniel R. Yorgason, "Direct Investment Positions for 2003: Country and Industry Detail," Survey 84 (July 2004): 40–51.

# **Data Availability**

The estimates of cross-border trade for 1986–2004 and the estimates of sales through majority-owned affiliates for 1989–2003 are available as files that can be downloaded from BEA's Web site. To access these files, go to <www.bea.gov>; under "International," click on "Trade in Goods and Services," and then look under "International Services" for "Detailed Estimates."

the levels during 1998-2001 when they fueled rapid growth in sales of services in several industries. In 2003, sales of services by affiliates in manufacturing with secondary activities in utilities and finance, which had accounted for much of the sales growth in 2002, fell sharply. In 2003, sales of services reported by U.S. companies involved in utilities, specifically those involved in energy trading, were negatively affected by the implementation of practices consistent with new accounting guidelines.<sup>21</sup> The decrease for manufacturing affiliates held down total sales growth by offsetting increases for affiliates in other industries, such as nonbank finance and insurance, professional, scientific, and technical services, and information. Sales of services to U.S. persons grew strongly in finance and insurance industries, as foreign companies continued to seek access to the large and open U.S. market through acquisitions; the increased sales were also attributable to corporate restructuring by some affiliates and to higher premiums in insurance markets. Acquisitions also contributed to growth in professional, scientific, and technical services, in information, and in transportation and warehousing. Sales of services by affiliates with primary activities in utilities increased significantly in 2003, in contrast to the decrease in sales by manufacturing affiliates with activities in utilities. The increase primarily resulted from increases in distribution activities that were partly offset by the effect of the new accounting guidance on energy trading ac-

Sales of services in the United States by U.S. affiliates with UBOs in all the major areas except Africa increased. The largest increases in sales were by affiliates with UBOs in Europe, Asia and Pacific, and Latin America and Other Western Hemisphere. Within Europe, the largest increases in sales were by affiliates with UBOs in the United Kingdom and affiliates with UBOs in France. For the United Kingdom, the majority of the increase was accounted for by affiliates in utilities. Sales of services by British-owned affiliates in computers and electronic products manufacturing also

<sup>21.</sup> In 2003, sales by U.S. affiliates with energy trading activities were affected by changes in the recommended methods of accounting for transactions involving derivative instruments held for trading purposes. In particular, the Emerging Issues Task Force (EITF), an organization established by the Financial Accounting Standards Board (FASB) to assist the FASB in the improvement of financial reporting, released Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Involved in Energy Trading and Risk Management Activities (EITF no. 02-3). Under this guidance, gains and losses from derivative instruments that are held for trading purposes should be shown on a net basis in energy trading firms' income statements, which affects sales of services reported to BEA. The effect of this accounting guidance on manufacturing affiliates with secondary activities in utilities that were heavily involved in energy trading was significant. The development of this new guidance may be related to the collapse of energy trading operations in 2002, which prompted a review of then existing guidance and practices.

increased, reflecting some affiliates' restructuring of operations to expand their service activities and new acquisitions. For France, the increase was accounted for by an increase in business, professional, and technical services that was due to acquisitions of affiliates in advertising and related services. Sales of services by affiliates with UBOs in the Netherlands and in Germany decreased. For the Netherlands, the decrease was more than accounted for by affiliates in petroleum and coal products manufacturing with secondary activities in natural gas distribution and in electric power generation, transmission, and distribution. For Germany, the decrease was more than accounted for by affiliates in transportation equipment manufacturing with secondary activities in leasing and finance.

For Asia and Pacific, the increase was mainly accounted for by affiliates with UBOs in Japan. For Latin America and Other Western Hemisphere, the increase was mostly accounted for by insurance affiliates with UBOs in the British islands in the Caribbean and in Bermuda.

By industry sector, affiliates in "finance (except depository institutions) and insurance" had the largest increase, followed by affiliates in professional, scientific, and technical services and in information. The increase in nonbank finance and insurance was mostly accounted for by insurance (except life insurance) and nondepository credit intermediation and related services. In professional, scientific, and technical services, most of the increase was in advertising and related services. In information, the increase was accounted for by affiliates in wireless telecommunications and in "internet service providers, web search portals, and data processing services." In contrast, sales of services by affiliates in manufacturing decreased because of affiliates' secondary activities in utilities (who were affected by the new accounting rule related to energy derivatives) and in finance.

# Appendix: New Data and Other Improvements to the Estimates of Cross-Border Trade in Services

As part of its continuing efforts to improve the data on international services, BEA has recently initiated several changes in methodology and data collection for cross-border trade in services.<sup>22</sup> Some of these improvements have already been implemented; others are underway. For a discussion of changes to the estimates of sales of services through affiliates, see the box "New Data on Insurance, Wholesale and Retail Trade, and Banking Services Sold through Affiliates" on page 29.

Quarterly surveys. Receipts and payments for "other private services" now incorporate data from new quarterly surveys that BEA conducts on many of the largest, most volatile types of services in U.S. international trade; previously, the estimates were based mainly on data from annual surveys.<sup>23</sup> Data from these quarterly surveys cover nearly a quarter of the value of private services transactions. The frequency of the surveys has increased, but the categories of data collected in the new quarterly surveys are the same as those in the annual surveys they replace. The response rates to the quarterly surveys have been similar to the response rates to the annual surveys.

**Education payments.** Payments of "other private services" for 2002–2004 incorporate new estimates of payments by U.S. residents for certain education services abroad that are based on foreign source data. The new estimates now include U.S. students enrolled in

# **Acknowledgments**

The estimates of cross-border trade were prepared by the following staff members of the Balance of Payments Division and the International Investment Division.

Travel and passenger fares—Joan E. Bolyard and Laura L. Brokenbaugh

Other transportation—Patricia A. Brown

Royalties and license fees and "other private services," affiliated—Gregory G. Fouch (for transactions of U.S. affiliates) and Mark W. New (for transactions of U.S. parents)

Royalties and license fees and "other private services," unaffiliated—Christopher J. Emond, Pamela Aiken, Neary Alguard, Felix Anderson, Stacey Ansell, Damon C.

Battaglia, Annette Boyd, Faith M. Brannam, Rafael I. Font, Hope R. Jones, Eddie L. Key, Kiesha Middleton, Steven J. Muno, Mark Samuel, John A. Sondheimer, Robert A. Becker, Erin Nephew, and Matthew J. Argersinger

The estimates of sales of services through majorityowned affiliates were prepared by staff members of the International Investment Division.

The information in tables 1, 2, 3, and 5 was consolidated by John A. Sondheimer. Computer programming for data estimation and the generation of the other tables were provided by Marie Colosimo, Carole J. Henry, Neeta B. Kapoor, Fritz H. Mayhew, Xia Ouyang, and Diane I. Young.

<sup>22.</sup> For a list of improvements implemented from 1990 to 2004, see the appendix in Maria Borga and Michael Mann, "U.S. International Services: Cross-Border Trade in 2003 and Sales Through Affiliates in 2002," SURVEY 83 (October 2003): 74–76 and the appendix in Borga and Mann, SURVEY 84 (October 2004): 41–43.

<sup>23.</sup> For a detailed explanation of the new quarterly surveys and the quarterly pattern for the major components of "other private services," see Christopher L. Bach "Annual Revision of the U.S. International Transactions Accounts, 1991–2004," Survey 85 (July 2005): 66–67.

degree-granting programs at universities in the United Kingdom and Australia. Previously, estimates of payments for education services consisted only of U.S. students studying in nondegree-granting programs in foreign countries and students studying in degree-granting programs in Canada. (The top destinations for U.S. students who enroll in degree-granting programs in foreign universities are Canada, the United Kingdom, and Australia—all English speaking countries.)

Medical payments. Payments of "other private services" for 1992–2004 incorporate new estimates of payments by U.S. residents for medical services abroad that are based on foreign source data. These payments are now included as a component of business, professional, and technical services; previously, these payments were not covered. The new estimates cover payments by U.S. residents who require incidental medical care while traveling abroad and payments by U.S. residents who travel to Mexico and Canada for medical purposes, such as cosmetic surgery and dental procedures.

Wholesale and retail trade services. The wholesale and retail trade industries are important services industries in the U.S. economy. These industries provide distributive services—that is, selling, or arranging for the sale of, goods to intermediate and final users. However, the value of cross-border trade in services do not include estimates of these services, because these services are embedded in the value of trade in goods. Exports of goods are valued at the f.a.s. (free alongside

ship) value of the merchandise at the U.S. port of exportation, including inland freight, insurance, and other charges incurred in placing the merchandise alongside the carrier at the U.S. port. Thus, any distributive services (as well as the value of other services that facilitate trade, such as transportation from the factory to the port) are included in the accounts for cross-border trade in goods, but not in those for cross-border trade in services. See Obie G. Whichard and Maria Borga, "Selected Issues in the Measurement of U.S. International Services," Survey 82 (June 2002): 45–46.

Comprehensive review. BEA has adopted longterm objectives for improving its estimates of cross-border trade in services. As a result, it is comprehensively reviewing its survey data and estimating procedures. BEA has several initiatives underway to improve its estimates, including an external review of its statistical procedures for estimating unreported transactions, an external review of the clarity of its surveys and instructions, and increased outreach to survey respondents. BEA has also been working with the Census Bureau and Internal Revenue Service to expand BEA's access to Census Bureau information that would help BEA expand its mailing list of companies who receive BEA surveys. BEA also plans to consider consolidating its survey forms covering cross-border transactions so that transactions with affiliated and unaffiliated foreign residents are reported on the same

Tables 1 through 11.2 follow.

Note. See the box "Types of Cross-Border Services: Coverage and Definitions" in the text.

n.a. Not available

1. Travel consists of expenditures by individuals who travel to foreign countries, so these transactions are between unaffiliated parties.

2. Passenger fares consist of fares paid by residents of one country to airline and vessel operators (carriers) that reside

<sup>2.</sup> Passenger fares consist of fares paid by residents of one country to airline and vessel operators (carriers) that reside in another country, so they are transactions between unaffiliated parties.

3. Education consists of expenditures for truition and living expenses by students studying in foreign countries, so these are transactions between unaffiliated parties.

4. Most insurance services transactions are deemed to be unaffiliated even when they are between affiliated companies because the services are deemed to be provided to the policyholders who pay the insurance premiums and who are unaffiliated with either company. Only primary insurance services between a U.S. company that is not an insurance company, such as a captive foreign insurance affiliate, are considered to be affiliated. Data on affiliated trade in insurance services are included in affiliated "other business, professional, and technical services."

5. Transactions in basic telecommunications services are deemed to be unaffiliated, even when the services flow through affiliated channels, because they represent the distribution of revenues collected from unaffiliated customers. Other types of the latter, unaffiliated elecommunications transactions are included under "telecommunications", data on affiliated transactions are not separately available and are included in affiliated "other business, professional, and technical services."

6. Includes computer and data processing services and database and other information services. For unaffiliated transactions, estimates of each of these services are shown in table 7.

7. See footnotes 4 and 5. For 1997–2000, this category also included affiliated management and consulting services and research and development and testing services.

search and development and testing services.

8. Only data on transactions with unaffiliated foreign persons are identifiable.

<sup>9.</sup> For 1992–1997, mining services are included in construction, architectural, engineering, and mining services; agricultural services are included in "other business, professional and technical services."

10. For 1998–2003, mining services are included in agricultural and mining services; the other services are included in "architectural, engineering, and other technical services" and in construction services.

11. Miscellaneous disbursements included transactions such as outlays to fund enwe-gathering costs of broadcasters and of print media, outlays to fund production costs of motion pictures, outlays to fund production costs of broadcast program material other than news, outlays to maintain government tourism and business promotion offices, and outlays for sales promotion and representation.

12. Trade-related services consist of auction services, Internet or online sales services, and services provided by independent sales agents. For exports, "merchanting" services are also included; these exports are measured as the difference between the cost and resale prices of goods that are purchased and resold abroad without significant processing. For imports, the value of these services is included in the value of the goods. Merchanting services were \$390 million in 2003 and \$914 million in 2004.

13. "Other business, professional, and technical services" consists of language translation services: security services:

<sup>13. &</sup>quot;Other business, professional, and technical services" consists of language translation services; security services; collection services; salvage services; satellite photography and remote sensing/satellite imagery services; transcription services; mailing, reproduction, and commercial art services; personnel supply services; and management of health care facilities services. See also footnote 9.

<sup>14.</sup> For 1992–96, affiliated transactions in this service were not separately available; they were included in affiliated "other

<sup>15.</sup> For 1997–2000, affiliated transactions in this service were included in "other business, professional, and technical

See table 1, footnote 3.
 Most insurance services transactions are deemed to be unaffiliated even when they are between affiliated companies, because the services are deemed to be provided to the policyholders who pay the insurance premiums and who are unaffiliated with either company. Only primary insurance services between a U.S. company that is not an insurance company and an affiliated foreign insurance company, such as a captive foreign insurance affiliate, are considered to be affiliated. Data on affiliated trade in insurance services are included in affiliated "other business, professional, and technical services."

<sup>3.</sup> Transactions in basic telecommunications services are deemed to be unaffiliated, even when the services flow through affiliated channels, because they represent the distribution of revenues collected from unaffiliated customers. Other types of telecommunications services, such as value-added services, may flow through either affiliated or unaffiliated channels. For the latter, unaffiliated telecommunications transactions are included under "telecommunications"; data on affiliated transactions are not separately available and are included in affiliated "other business, professional, and technical services."

4. See table 2, footnote 1.

<sup>1.</sup> See table 1, footnote 3.
2. Most insurance services transactions are deemed to be unaffiliated even when they are between affiliated companies, because the services are deemed to be provided to the policyholders who pay the insurance premiums and who are unaffiliated with either company. Only primary insurance services between a U.S. company that is not an insurance company and an affiliated foreign insurance company, such as captive foreign insurance affiliate, are considered to be affiliated. Data on affiliated trade in insurance services are included in affiliated "other business, professional, and technical services."

<sup>3.</sup> Transactions in basic telecommunications services are deemed to be unaffiliated, even when the services flow through affiliated channels, because they represent the distribution of revenues collected from unaffiliated customers. Other types of telecommunications services, such as value-added services, may flow through either affiliated or unaffiliated channels. For the latter, unaffiliated telecommunications transactions are included under "telecommunications"; data on affiliated transactions are not separately available and are included in affiliated "other business, professional, and technical services."

4. See table 2, footnote 1.

5. See table 2, footnote 1.

Nore: Insurance services consist of: (1) A share of premiums (the remaining share is for settlement of "normal" losses, where normal losses are inferred from the relationship between actual losses and premiums averaged over several years). (2) auxiliary insurance services, such as agents' commissions, actuarial services, brokering and agency services, and salvage administration services, and (3) premium supplements, representing income on funds held by insurance companies on which policyholders have a claim. This income is treated as accruing to the policyholders, who pay it back to insurers as premium supplements to cover part of the cost of insurance services. Differences between the portion of premiums allocated to loss settlement and the amount of losses actually incurred or recovered—sometimes termed "net insurance settlements"—are recorded in unilateral current transfers in the U.S. international transactions accounts. A positive (negative) amount for net insurance settlements would occur if losses paid are less (greater) than normal and fosses recovered are greater (less) than normal. In 2002, net insurance settlements were -\$240 million (losses paid were \$727 million less than normal).

<sup>\*</sup>Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. The \$4,467 million in receipts for insurance services in 2002 consisted of the share of premiums that represents charges for insurance services of \$2,863 million (total premiums were \$11,905 million and premiums for settlement of normal losses were \$9,041 million, auxiliary insurance services of \$200 million, and premium supplements of \$1,406 million. (See note below.)

2. The \$22,150 million in payments for insurance services in 2002 consisted of the share of premiums that represents charges for insurance services of \$15,934 million (total premiums were \$48,156 million and premiums tor settlement of normal losses were \$32,222 million), auxiliary insurance services of \$428 million, and premium supplements of \$5,789 million. (See note below.)

3. The \$8,314 million in losses paid in 2002 consisted of \$7,426 million paid on reinsurance and \$888 million paid on primary insurance.

paid on primary insurance.

4. The \$31,165 million recovered on primary insurance.

4. The \$31,165 million recovered on reinsurance and \$251 million recovered on primary insurance.

5. See table 2, footnote 1.

Norz: Insurance services consist of: (1) A share of premiums (the remaining share is for settlement of "normal" losses, where normal losses are inferred from the relationship between actual losses and premiums, averaged over several years), (2) auxiliary insurance services, such as agents' commissions, actuarial services, brokering and agency services, and salvage administration services, and (3) premium supplements, representing income on funds held by insurance companies on which policyholders have a claim. This income is treated as accruing to the policyholders, who pay it back to insurers as premium supplements to cover part of the cost of insurance services. Differences between the portion of premiums allocated to loss settlement and the amount of losses actually incurred or recovered—sometimes termed "net insurance settlements"—are recorded in unilateral current transfers in the U.S. international transactions accounts. A positive (negative amount for ret insurance settlements would occur if losses paid are less (greater) than normal and/or if losses recovered are greater (less) than normal. In 2003, net insurance settlements were —\$2,262 million (losses paid were \$944 million less than normal).

<sup>\*</sup>Less than \$500,000

D Suppressed to avoid disclosure of data of individual companies

1. The \$5,880 million in receipts for insurance services in 2003 consisted of the share of premiums that represents charges for insurance services of \$3,679 million (total premiums were \$15,768 million and premiums for settlement of normal losses were \$12,089 million), auxiliary insurance services of \$442 million, and premium supplements of \$1,757 million. (See note below.)

2. The \$26,561 million in payments for insurance services in 2003 consisted of the share of premiums har persents charges for insurance services of \$19,446 million (total premiums were \$57,606 million had premiums for settlement of normal losses were \$38,160 million, auxiliary insurance services of \$532 million, and premium supplements of \$6,583 million. (See note below.)

3. The \$11,146 million in losses paid in 2003 consisted of \$10,365 million paid on reinsurance and \$780 million paid on primary insurance.

4. The \$34,953 million in losses recovered in 2003 consisted of \$34,876 million recovered on primary insurance.

and \$77 million recovered on primary insurance.

1. The \$6,125 million in receipts for insurance services in 2004 consisted of the share of premiums that represents charges for insurance services of \$3,989 million (total premiums were \$17,974 million and premiums for settlement of normal losses were \$13,985 million), auxiliary insurance services of \$346 million, and premium supplements of \$1,790 million. (See note below.)

2. The \$29,882 million in payments for insurance services in 2004 consisted of the share of premiums that represents charges for insurance services of \$22,415 million (total premiums were \$67,105 million and premiums for settlement of normal losses were \$44,689 million), auxiliary insurance services of \$496 million, and premium supplements of \$6,971 million. (See note below.)

3. The \$10,936 million in losses paid in 2004 consisted of \$9,893 million paid on reinsurance and \$1,045 million paid on primary insurance.

<sup>5.</sup> See table 2, footnote 1.

Nore. Insurance services consist of: (1) A share of premiums (the remaining share is for settlement of "normal" losses, where normal losses are inferred from the relationship between actual losses and premiums averaged over several years). (2) auxiliary insurance services, such as agents' commissions, actuarial services, brokering and agency services, and salvage administration services, and (3) premium supplements, representing income on funds held by insurance companies on which policyholders have a claim. This income is treated as accruing to the policyholders, who pay it back to insurers as premium supplements to cover part of the cost of insurance services. Differences between the portion of premiums allocated to loss settlement and the amount of losses actually incurred or recovered—sometimes termed "net insurance settlements"—are recorded in unilateral current transfers in the U.S. international transactions accounts. A positive (negative) amount for net insurance settlements would occur if losses paid are less (greater) than normal and/or if losses recovered are greater (less) than normal. In 2004, net insurance settlements were —\$6,601 million (losses paid were \$3,049 million less than normal).

<sup>\*</sup>Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. Receipts for construction, architectural, and engineering services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 2002, total net receipts of \$2,248 million were derived as gross operating revenues of \$6,000 million less merchandise exports of \$482 million and foreign expenses of \$3,270 million. The components of the total are as follows: Construction services—net receipts of \$568 million were derived as gross operating revenues of \$3,068 million less merchandise exports of \$285 million and foreign expenses of \$2,215 million. Architectural, engineering, and other technical services—net receipts of \$1,679 million were derived as gross operating revenues of \$2,932 million less merchandise exports of \$197 million and foreign expenses of \$1,055 million. Payments for construction, architectural, and engineering services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

2. Data for this type of affiliated services are not separately available. However, these data are included in "other" affiliated services and in total affiliated services.

<sup>3.</sup> Data for this type of affiliated services are not separately available. However, these data are included in total computer and information services and in total affiliated services.

4. Consists of affiliated services except for the following services that are shown in the adjacent columns: computer and information services; research, development and testing services; management, consulting, and public relations services; and operational leasing services.

5. Consists of accounting, auditing, and bookkeeping services; agricultural, mining, and on-site processing services; medical services; miscellaneous disbursements (see footnote 11 table 1); sports and performing arts; trade-related services (see footnote 12 table 1); training services; and other business, professional, and technical services (see footnote 13 table 1). Receipts for mining services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 2002, mining services net receipts of \$101 million were derived as gross operating revenues of \$593 million less merchandise exports of \$7 million and foreign expenses of \$485 million. Payments for mining services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

6. See table 2, footnote 1.

D Suppressed to avoid disclosure of data of individual companies

1. Receipts for construction, architectural, and engineering services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 2003, total net receipts of \$2,560 million were derived as gross operating revenues of \$5,440 million less merchandise exports of \$428 million and foreign expenses of \$2,452 million. The components of the total are as follows: Construction services—net receipts of \$557 million were derived as gross operating revenues of \$2,245 million less merchandise exports of \$293 million and foreign expenses of \$1,575 million. Architectural, engineering, and other technical services—net receipts of \$503 million were derived as gross operating revenues of \$3,015 million less merchandise exports of \$135 million and foreign expenses of \$877 million. Payments for construction, architectural, and engineering services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

Data for this type of affiliated services are not separately available. However, these data are included in "other" affiliated services and in total affiliated services.
 Data for this type of affiliated services are not separately available. However, these data are included in total computer and information services and in total affiliated services.
 Consists of affiliated services except for the following services that are shown in the adjacent columns: computer and information services; research, development and testing services; management, consulting, and public relations services; and congrational leasing services.

information services; research, development and testing services; management, consulting, and public relations services; and operational leasing services.

5. See table 7.1, footnote 5. Receipts for mining services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 2003, mining services net receipts of \$86 million were derived as gross operating revenues of \$297 million less merchandise exports of \$14 million and foreign expenses of \$197 million. Payments for mining services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

6. See table 2, footnote 1.

<sup>\*</sup>Less than \$500,000.

D Suppressed to avoid disclosure of data of individual companies.

1. Receipts for construction, architectural, and engineering services are published net of merchandise exports, which are included in merchandise trade in the U.S. international transactions accounts, and net of outlays abroad for wages, services, materials, and other expenses. In 2004, total receipts were \$2,991 million for construction, architectural, and engineering services. The components of the total are as follows: Construction services—receipts of \$396 million and foreign expenses of \$1,623 million. Architectural and engineering services—receipts of \$2,595 million were derived as gross operating revenues of \$3,893 million less a BEA estimate of \$1,298 million for merchandise exports and foreign expenses. Payments for construction, architectural, and engineering services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be small.

Data for this type of affiliated services are not separately available. However, these data are included in "other" affiliated services and in total affiliated services.
 Data for this type of affiliated services are not separately available. However, these data are included in total computer and information services and in total affiliated services.
 Consists of affiliated services except for the following services that are shown in the adjacent columns: computer and information services; research, development and testing services; management, consulting, and public relations services; and operational leasing services.

and operational leasing services.

5. See table 7.1, footnote 5. In 2004, mining services receipts were \$13 million. Receipts and payments for mining services are not published net of merchandise imports and outlays for wages and other expenses. Data are not collected for merchandise imports and wages and other expenses, and no estimates are made because they are believed to be

<sup>\*</sup> Less than \$500,000.

engaged in petroleum shipping, other water transportation, or operating movable oil- and gas-drilling equipment. Beginning with the estimates for 1999, BEA is no longer using the "international" category in tabulations of direct investment estimates. This change was made to comply with international guidelines for the compilation of international transactions and direct investment statistics set forth by the International Monetary Fund's Balance of Payments Manual, 5th ed. In accordance with the guidelines, affiliates formerly classified in "international" have been reclassified in the country of operator of the ship or equipment. In most cases the country of the operator is the same as the country of the operator is the same as the country of the operator is the United States, the affiliates have been defined out of BEA's direct investment estimates

D Suppressed to avoid disclosure of data of individual companies.

1. For MOFAs, "country" is the country of the affiliate; for MOUSAs, it is the country of the affiliate's ultimate beneficial

<sup>1.</sup> For MOFAs, "country" is the country of the affiliates; for MOUSAS, it is the country of the affiliates of the country of the affiliates were classified as goods or services based on industry codes derived from the North American Industry Classification System; the estimates for prior years were based on codes derived from the 1987 Standard Industrial Classification System. This change resulted in a redefinition of sales of services by affiliates, which resulted in a net shift of sales from goods to services. See the box "Changes in the Definition and Classification of Sales of Services by Foreign Affiliates" in the November 2001 Surver, page 58, available at <www.bea.gov>.

3. Beginning in 1997, sales by U.S. affiliates were classified as goods or services based on industry codes derived from the North American Industry Classification System; the estimates for prior years were based on codes derived from the North American Industry Classification System; the estimates for prior years were based on codes derived from the North American Industry Classification System. This change resulted in a redefinition of sales of services by affiliates, which resulted in a net shift of sales from goods to services. See the box "Changes in the Definition and Classification of Sales of Services by U.S. Affiliates" in the October 1999 Surver, page 61, available at <www.bea.gov>.

4. Foreign affiliates classified in "international" are those that have operations in more than one country and that are

cases where the country of the operator is the critical creates, the administration of the country of the operator is the critical creates, and the standard for U.S. affiliates that have a foreign parent but whose ultimate beneficial owner is a U.S. person. 6. For the years shown, the European Union comprises Belgium, Denmark, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, the United Kingdom, Austria, Finland, and Sweden. MOFAs Majority-owned foreign affiliates MOUSAs Majority-owned U.S. affiliates

Table 10.1 Sales of Services to Foreign Persons by U.S. MNCs Through Their Nonbank MOFAs, Industry of Affiliate by Country of Affiliate, 2002 [Millions of dollars]

1. Because sales resulting from construction activities are recorded as sales of goods rather than sales of services, the sales of services through MOUSAs in construction represent sales in secondary, nonconstruction industries. In 2003, sales of goods to U.S. residents by MOUSAs in construction were estimated to be \$27.2 billion. These sales of goods were

78 October 2005

# **U.S. International Transactions**

# Second Quarter of 2005

By Kelly K. Pierce and Matthew J. Argersinger

THE U.S. current-account deficit—the combined ▲ balances on trade in goods and services, income, and net unilateral current transfers-decreased to \$195.7 billion (preliminary) in the second quarter of 2005 from \$198.7 billion (revised) in the first quarter (table A, chart 1). The decrease was accounted for by a decrease in net outflows for unilateral current transfers and a small increase in the surplus on services. In contrast, the balance on income shifted from a surplus to a deficit, and the deficit on goods increased.

In the financial account, net recorded financial inflows—net acquisitions by foreign residents of assets in the United States less net acquisitions by U.S. residents of assets abroad—decreased to \$142.3 billion in the second quarter from \$161.9 billion in the first quarter. Both financial outflows for U.S.-owned assets abroad and financial inflows for foreign-owned assets in the United States increased, but outflows increased more than inflows.

The statistical discrepancy—errors and omissions in recorded transactions—was a positive \$53.6 billion in the second quarter, compared with a positive \$41.2 billion in the first quarter.

The following are highlights for the second quarter of 2005:

- Goods exports increased at a strong rate, but in dollar amount, they increased less than goods imports.
- The balance on income shifted from a surplus to a deficit.
- Direct investment income receipts strengthened, and direct investment income payments increased to a record level.
- Both U.S. claims and U.S. liabilities reported by banks increased strongly in the second quarter after decreasing in the first quarter.
- Net foreign private purchases of U.S. Treasury securities slowed, and net foreign private purchases of other U.S. securities picked up.

For more information on the nominal and real indexes of the foreign exchange value of the U.S. dollar, see Federal Reserve Bulletin, vol. 84 (October 1998): 811–18.
 Weighted average of the foreign exchange value of the U.S. dollar against the currencies of a broad group of U.S. rading partners, including the currencies of the euro-area countries, Australia, Canada, Japan, Sweden, Switzerland, United Kingdom, Argentina, Brazil, Chile, Colombia, Mexico, Venezuela, China, Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand, Israel, Saudi Arabia, and Russia. Data: Federal Reserve Board.

Malaysia, the Philippines, Singapore, laiwan, Irialianu, israet, Saudi Arabia, and nussia. Data: redeal reserve boato. Monthly and quarterly average rates. Index rebased by BEA.

3. Weighted average of the foreign exchange value of the U.S. dollar against broad-index currencies that circulate widely outside the country of issue, including the currencies of the euro-area countries, Australia, Canada, Japan, Sweden, Switzerland, and the United Kingdom. The weight for each currency is its broad-index weight divided by the sum of the broad-index weights for all of the currencies included in the major currency index. Data: Federal Reserve Board.

Monthly and quarterly average rates. Index rebased by BEA.

4. Weighted average of the foreign exchange value of the U.S. dollar against broad-index currencies that do not circulate widely outside the country of issue, including the currencies of Argentina, Brazil, Chile, Colombia, Mexico, Venezuela, China, Hong Kong, India, Indonesia, Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand, Israel, Saudi Arabia, and Russia. The weight for each currency is its broad-index weight divided by the sum of the broad-index weights for all of the currencies included in the other important trading partners index. Data: Federal Reserve Board. Monthly and quarterly

average rates. Index rebased by BEA.

5. Data: Federal Reserve Board. Monthly and quarterly average rates. Indexes prepared by BEA.

6. The euro area includes Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, and Spain

depreciation, during which the dollar fell to a record low. In the second quarter, the U.S. dollar appreciated 4 percent against the euro, 3 percent against the Japanese yen, and 1 percent against the Canadian dollar.

In the United States, data releases in the second quarter indicated that the U.S. economy in the first quarter continued to expand in the 3- to 4-percent range. Releases in May and June indicated that the deficit on U.S. trade in goods and services on a monthly average basis had declined. U.S. monetary authorities raised the target level for the Federal funds rate by 50 basis points, to 3.25 percent, in the second quarter. U.S. long-term interest rates edged lower, and U.S. stock prices edged higher.

In Europe, data releases indicated that economic growth in the euro area picked up, to about 2 percent, in the first quarter. Among selected euro area countries, economic activity in Germany strengthened, and activity in France and Italy slowed. Euro area monetary policy was unchanged, and the minimum bid rate on main refinancing operations remained at 2 percent. In Japan, reports showed that economic growth was substantially higher in the first quarter than in the fourth quarter. In Canada, reported economic growth remained at about 2 percent, and Canadian monetary authorities left the target for the overnight rate at 2.5 percent.

#### **Current Account**

### Goods and services

The deficit on goods and services increased \$0.3 billion, to \$173.3 billion, in the second quarter from \$173.1 billion in the first quarter. A \$0.6 billion increase in the deficit on goods was partly offset by a \$0.3 billion increase in the surplus on services.

#### **Revisions to the Estimates**

The estimates of U.S. international transactions for the first quarter have been revised from preliminary estimates that were published in the July 2005 SURVEY OF CURRENT BUSINESS.

The current-account deficit was revised to \$198.7 billion from \$195.1 billion. The goods deficit was unrevised at \$186.3 billion; the services surplus was revised to \$13.3 billion from \$14.6 billion; the income surplus was revised to \$0.6 billion from \$3.8 billion; and unilateral current transfers were revised to net outflows of \$26.3 billion from \$27.1 billion. Net recorded financial inflows were revised to \$161.9 billion from \$165.4 billion.

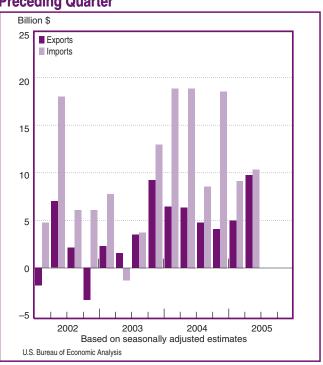

#### Goods

The deficit on goods increased to \$186.9 billion in the second quarter from \$186.3 billion in the first quarter. The increase was the smallest in seven quarters and was far smaller than the record increase in the fourth quarter of 2004. Exports increased at the fastest rate in several quarters, and imports picked up (chart 3).

**Exports.** Exports increased \$9.7 billion, or 5 percent, to \$223.5 billion. The dollar increase was the largest on record, and the percentage increase was the largest since the fourth quarter of 2003. Real exports increased 4 percent, and export prices increased 1 percent (table C).<sup>2</sup> The increase in value was partly attributable to substantial increases in civilian aircraft, which is a component of capital goods, and in agricultural products. In addition, nonagricultural industrial supplies and materials, the largest contributor to export growth in recent quarters, accelerated in the second quarter (chart 4). By area, exports to all major regions increased.

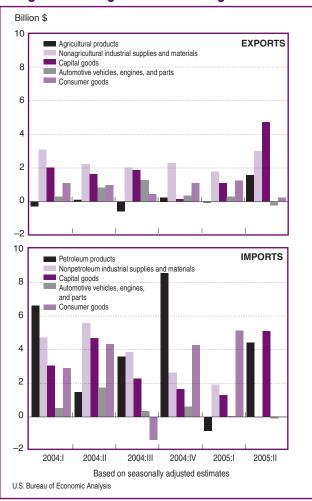

Capital goods increased \$4.7 billion, to \$90.2 billion. Civilian aircraft, engines, and parts surged \$2.5 billion, mostly as a result of deliveries of complete

# **Chart 3. U.S. Trade in Goods: Change From Preceding Quarter**

<sup>2.</sup> Quantity (real) estimates are calculated using a chain-type Fisher formula with annual weights for all years and quarterly weights for all quarters. Real estimates are expressed as chained (2000) dollars. Price indexes (2000 = 100) are also calculated using a chain-type Fisher formula.

# **Chart 4. Trade in Goods by Selected End-Use Categories: Change From Preceding Quarter**

aircraft to Japan, Africa, and China. Capital goods other than civilian aircraft also picked up. Among high-technology capital goods, exports of semiconductors rebounded \$0.6 billion, mostly to Asia, after five quarters of decline. In addition, computers, peripherals, and parts increased \$0.5 billion after two quarters of little growth, and telecommunications equipment increased \$0.2 billion. Scientific, hospital, and medical equipment and electric generating machinery also increased.

Nonagricultural industrial supplies and materials increased \$3.0 billion, to \$56.1 billion. These commodities continued to be important contributors to growth in total exports. More than half of the secondquarter increase was accounted for by energy products, which have been boosted by increases in petroleum export prices over the last six quarters. In the second quarter, metals and nonmetallic products also increased, mostly as a result of exports of nonferrous metals to Asia, mainly to China, and of steelmaking materials to Canada. Export prices of nonagricultural industrial supplies and materials increased at a much slower rate in the second quarter than in the previous five quarters, partly as a result of a decline in the prices of iron and steel products and little change in the prices of chemicals (chart 5).

Agricultural products jumped \$1.6 billion, to \$17.1 billion. Nearly half of the increase was accounted for by a rise in soybean exports, mostly to Mexico and Japan. Both demand for U.S. soybeans and soybean prices were boosted by lowered soybean production in Brazil as a result of drought conditions. An increase in

p Preliminary r Revised

<sup>1.</sup> Because chain indexes use weights of more than one period, the corresponding chained dollar estimates are usually not additive.

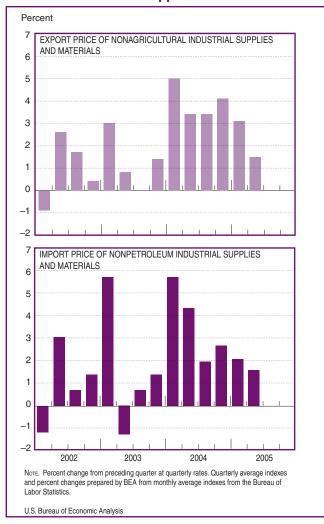

Note. Percent changes in quarterly estimates are not annualized and are expressed at quarterly rates.

grains and preparations also contributed to the increase in agricultural products.

Consumer goods increased \$0.2 billion, to \$28.5 billion. An increase in durable goods, mostly exports of household and kitchen appliances to Canada and Latin America, was partly offset by a decrease in nondurable goods, mostly medical, dental, and pharmaceutical preparations to Europe.

Automotive vehicles, engines, and parts decreased \$0.2 billion, to \$23.5 billion, after increasing for six consecutive quarters. A decline in passenger cars was partly offset by an increase in "other" parts and accessories.

Chart 5. Percent Change in Export and Import Prices of Selected Industrial Supplies and Materials

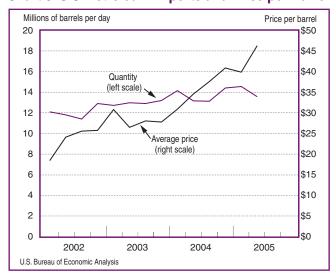

**Imports.** Imports increased \$10.3 billion, or 3 percent, to \$410.5 billion. Real imports increased less than 1 percent, and import prices increased 2 percent (table C). The increase in value was mostly attributable to increases in capital goods and in petroleum and petroleum products (chart 4). By area, imports from China

and Europe increased the most.

Capital goods increased \$5.2 billion, to \$95.9 billion. A third of the increase was accounted for by a \$1.7 billion surge in imports of telecommunications equipment, mostly from Asia. Among other high-technology products, imports of computers, peripherals, and parts, mostly from China, increased \$0.4 billion, and semiconductors increased slightly after decreasing for two quarters. Capital goods were also boosted by substantial increases in oil drilling, mining, and construction machinery and in electric generating machinery. Civilian aircraft, engines, and parts increased \$0.7 billion, mostly as a result of an increase in complete aircraft from France and Germany.

Petroleum and petroleum products increased \$4.5 billion, to \$57.4 billion. The increase was mostly accounted for by increases in imports from members of OPEC, particularly Saudi Arabia and Algeria, and from Western Europe and Mexico. After declining in the first quarter, the average price per barrel jumped 16 percent in the second quarter, to \$46.30 (chart 6). The price of

Chart 6. U.S. Petroleum Imports and Price per Barrel

petroleum imports has increased 150 percent in the last 3½ years, mainly because of strong worldwide demand. In the second quarter, the average number of barrels imported daily decreased 7 percent, to 13.57 million from 14.56 million. Domestic consumption fell 1 percent, and domestic production increased 3 percent.

Consumer goods were virtually unchanged at \$102.1 billion. Consumer durable goods decreased \$1.8 billion, or 4 percent, a record dollar decrease and the largest percentage drop since the second quarter of 2001. All major categories of durable goods fell, but toys, shooting and sporting goods, and bicycles decreased the most. In contrast, consumer nondurable

goods increased \$1.4 billion, mostly as a result of a rise in imports of medical, dental, and pharmaceutical preparations from Europe, but a small rise in textile apparel and household goods also contributed to the increase. Imports of textile apparel and household goods from China jumped for the second consecutive quarter, while imports of these goods from other countries in Asia except Japan and from Europe decreased. The jump in textile imports from China was partly due to the expiration on December 31, 2004, of a quota system that capped U.S. imports of textiles and apparel from developing countries. In late May 2005, the United States imposed quotas on several categories of textiles from China, which limited future growth in imports of these products to 7.5 percent a year.

Nonpetroleum industrial supplies and materials were virtually unchanged at \$65.3 billion after seven consecutive quarters of growth. Decreases in iron and steel products and in steelmaking materials were mostly offset by increases in nonferrous metals and in "other" metals and nonmetallic products. Import prices of nonpetroleum industrial supplies and materials increased at the slowest rate in six quarters (chart 5).

Automotive vehicles, engines, and parts decreased \$0.1 billion. A substantial decrease in imports of passenger cars from Canada and the Republic of Korea was mostly offset by an increase in imports of trucks, buses, and special purpose vehicles from Canada and Mexico and an increase in "other" parts and accessories.

Balances by area. Increases in the deficits with Europe and with the countries in Asia except Japan were partly offset by decreases in the deficits with Canada and Japan.<sup>3</sup> The deficit with Europe increased \$3.5 billion, as deficits with Germany, France, and Italy increased and the surplus with the Netherlands decreased. The deficit with the other countries in Asia increased \$2.0 billion, as the deficit with China increased \$3.4 billion. In contrast, the deficit with Canada decreased \$3.9 billion, and the deficit with Japan decreased \$1.6 billion.

#### **Services**

The surplus on services increased to \$13.6 billion in the second quarter from \$13.3 billion in the first quarter. The increase was attributable to a larger increase in services receipts than in services payments. The surplus on services has risen substantially over the last three quarters, partly because of a larger increase in travel receipts than in travel payments.

In the second quarter, travel receipts increased \$1.6 billion, to \$21.6 billion. The strong increase was mostly attributable to a rise in receipts from overseas visitors to the United States as a result of an increase in the number of visitors. Travel payments increased \$0.7 billion, to \$18.1 billion, as a result of a rise in U.S. travelers' payments to overseas countries and to Mexico. Passenger fare receipts increased \$0.2 billion, to \$5.3 billion, and passenger fare payments increased \$0.3 billion, to \$6.5 billion.

"Other" transportation receipts increased \$0.3 billion, to \$10.2 billion. The increase was mostly attributable to a rise in ocean port services, reflecting increases in trade volume and in bunker fuel revenues. "Other" transportation payments decreased \$1.0 billion, to \$14.8 billion. The large decrease was mostly attributable to a fall in payments for ocean freight, which had risen substantially in the first quarter.

"Other" private services receipts decreased \$0.7 billion, to \$37.3 billion. A decrease in affiliated services receipts was partly offset by an increase in unaffiliated receipts, mostly for business, professional and technical services. "Other" private services payments increased \$0.9 billion, to \$25.8 billion, almost entirely as a result of increases in payments for affiliated services and for insurance services.

#### Income

The balance on income shifted to a deficit of \$0.5 billion in the second quarter from a surplus of \$0.6 billion in the first quarter.<sup>4</sup> Income payments increased more than income receipts.

Since rising to a peak surplus in the fourth quarter of 2003, the balance on income has gradually fallen. The movement in the balance is attributable to larger increases in income payments on portfolio and direct investment than in income receipts.

Since the fourth quarter of 2003, income payments on foreign portfolio holdings of U.S. securities have increased much more than income receipts on U.S. portfolio holdings of foreign securities, mostly as a result of strong net foreign purchases of U.S. securities. In

<sup>3.</sup> Seasonally adjusted estimates of exports for areas and countries are derived by applying seasonal factors for total U.S. agricultural and nonagricultural exports to the unadjusted agricultural and nonagricultural exports for areas and countries and then summing the seasonally adjusted estimates. Seasonally adjusted estimates of imports for areas and countries are derived by applying seasonal factors for total petroleum and nonpetroleum imports to the unadjusted petroleum and nonpetroleum imports for areas and countries and then summing the seasonally adjusted estimates. (The seasonal factors are derived from the seasonal adjustment of U.S. exports and U.S. imports by five-digit end-use commodity categories.)

<sup>4.</sup> Because the recent balances on income are small, future revisions to the estimates of income receipts and payments could change a deficit to a surplus or vice versa.

addition, income payments on foreign direct investment in the United States have increased more than income receipts on U.S. direct investment abroad, mostly as a result of stronger economic growth and corporate earnings in the United States than in many foreign countries.

In the second quarter, receipts of income on U.S. direct investment abroad increased \$3.5 billion, to \$61.7 billion, after a large first-quarter decrease. Foreign affiliates' earnings increased in most major industries. Manufacturing earnings were boosted by increases in the earnings of affiliates in "other" manufacturing, mainly affiliates in Canada, Europe, and Japan, in transportation equipment, and in chemicals. Although the American Jobs Creation Act of 2004 has no net effect on total income receipts, dividends were unusually large for the second consecutive quarter as a result of the act (see the box "The Effect of the American Jobs Creation Act of 2004 on U.S. International Transactions").

Payments of income on foreign direct investment in the United States increased \$2.8 billion, to \$32.6 billion. U.S. affiliates' earnings increased to a record level for the third consecutive quarter. The second-quarter rise was attributable to increases in the earnings of affiliates in "other" industries (mostly in information), in wholesale trade (mostly in auto wholesaling), and in finance. By area, the earnings of affiliates of European parent companies increased the most.

Receipts of "other" private income increased \$2.8 billion, to \$50.1 billion. Increases in interest receipts on bank and nonbank claims, which resulted from a rise in short-term interest rates, were partly offset by decreases in dividends and interest receipts on U.S.

holdings of foreign securities. Payments of "other" private income increased \$2.8 billion, to \$51.2 billion. Increases in interest payments on bank and nonbank liabilities, which resulted from a rise in short-term interest rates, were partly offset by a decrease in interest payments on foreign holdings of U.S. corporate bonds.

Receipts of income on U.S. Government assets increased to \$0.8 billion. Payments of income on U.S. Government liabilities increased \$1.8 billion, to \$27.9 billion. The increase was attributable to an increase in interest payments on foreign holdings of U.S. Treasury and agency securities.

#### **Unilateral current transfers**

Unilateral current transfers were net outflows of \$21.9 billion in the second quarter, down from net outflows of \$26.3 billion in the first quarter. The decrease was mostly accounted for by a decline in U.S. Government grants, which were boosted in the first quarter by grants to Israel and Egypt under the credit waiver program and under economic assistance programs.

## **Capital Account**

Capital account transactions were net outflows of \$0.3 billion in the second quarter, down from net outflows of \$4.5 billion in the first quarter. First-quarter net outflows were boosted by debt forgiveness for Iraq.

#### **Financial Account**

Net recorded financial inflows—net acquisitions by foreign residents of assets in the United States less net acquisitions by U.S. residents of assets abroad—were \$142.3 billion in the second quarter, down from \$161.9 billion in the first quarter. Financial outflows for

#### The Effect of the American Jobs Creation Act of 2004 on U.S. International Transactions

The American Jobs Creation Act of 2004, which was signed into law on October 22, 2004, allows U.S. multinational companies (MNCs) to receive a historically large amount of dividends from abroad for a period of 1 year (calendar year 2004 or calendar year 2005 at taxpayers' option, for calendar year taxpayers) at a reduced rate of taxation on the increased dividends.

In the *current account*, distributed earnings (including dividends) that U.S. MNCs receive from their foreign affiliates are one component of foreign affiliates' earnings; earnings are recorded in direct investment income receipts when they are earned (international transactions account table 1, line 14). An increase in dividends received from abroad by U.S. MNCs as a result of the act affects only the *form* in which earnings are received, not its total *amount*. For a given amount of earnings, an increase in distributed earnings (including dividends)

leads to an equal and offsetting decrease in reinvested earnings, the other component of foreign affiliates' earnings.

In the *financial account*, reinvested earnings on U.S. direct investment abroad is one component of direct investment outflows (table 1, line 51). A decrease in reinvested earnings stemming from an increase in dividends as a result of the act therefore results in smaller direct investment outflows. Depending on the method of settlement, the decrease in direct investment outflows is balanced or offset by changes in one or more other financial account components.

Detailed estimates of direct investment transactions (including distributed earnings) are shown in table 6a. It is not possible for BEA to separately identify transactions arising from the American Jobs Creation Act.

U.S.-owned assets abroad picked up more than financial inflows for foreign-owned assets in the United States.

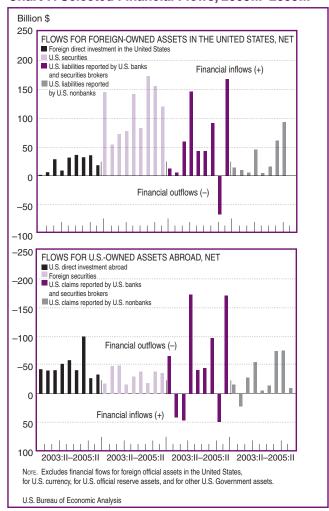

#### U.S.-owned assets abroad

Net U.S.-owned assets abroad increased \$250.8 billion in the second quarter after an increase of \$81.5 billion in the first quarter. The pickup was attributable to a very large increase in U.S. claims on foreigners reported by U.S. banks in the second quarter after a decrease in the first quarter.

**U.S. official reserve assets.** U.S. official reserve assets increased \$0.8 billion in the second quarter, in contrast to a decrease of \$5.3 billion in the first quarter. The increase was mostly attributable to an increase in the U.S. reserve position in the International Monetary Fund.

Claims reported by banks and by nonbanks. U.S. claims on foreigners reported by U.S. banks and securities brokers increased a near-record \$171.0 billion in the second quarter, in contrast to a decrease of \$49.3 billion in the first quarter (chart 7).

Chart 7. Selected Financial Flows, 2003:II-2005:II

Banks' own claims denominated in dollars increased \$169.2 billion in the second quarter, in contrast to a decrease of \$61.1 billion in the first quarter. The surge in dollar outflows partly reflected heightened activity in the international syndicated loan market, a pickup in interoffice transfers of funds between banks' home offices and their offices abroad, and continued U.S. bank lending to finance substantial net foreign purchases of U.S. securities. Dollar outflows were supported by an abundance of liquidity in the U.S. banking system. Dollar deposits and brokerage balances, resale agreements, and "other" claims all increased strongly in the second quarter.

Banks' domestic customers' claims denominated in dollars decreased \$2.9 billion, in contrast to an increase of \$17.0 billion. In the second quarter, decreases in deposits and in negotiable certificates of deposit were partly offset by increases in other short-term securities and foreign commercial paper.

Claims reported by U.S. nonbanking concerns increased \$9.6 billion after an increase of \$74.9 billion. The second-quarter increase was more than accounted for by an increase in deposits, largely in Caribbean financial centers.

Foreign securities. Net U.S. purchases of foreign securities were \$36.0 billion in the second quarter, down slightly from \$38.7 billion in the first quarter. A decrease in net U.S. purchases of foreign stocks more than offset a shift to net U.S. purchases of foreign bonds

Net U.S. purchases of foreign stocks were \$20.8 billion, down from \$39.8 billion. In local currency terms, foreign stock markets outperformed the U.S. stock market for the second consecutive quarter. However, appreciation of the dollar in the second quarter caused U.S. investors' returns in foreign markets to be negative in dollar terms. Net U.S. purchases of stocks from the United Kingdom decreased markedly, and net U.S. purchases of stocks from Japan were the lowest in several quarters. Merger-related exchanges of stock were minimal in the first and second quarters.

### **Data Availability**

The estimates that are presented in tables 1–12 of the U.S. international transactions accounts (table 12 is presented annually in the July Survey of Current Business) are available interactively on BEA's Web site at <www.bea.gov>. Users may view and download the most recent quarterly estimates (annual estimates for table 12) for an entire table, or they may select the period, frequency, and lines that they wish to view. The estimates are available in an HTML table, in an Excel file, or as comma-separated values.

Transactions in foreign bonds shifted to net U.S. purchases of \$15.2 billion from net U.S. sales of \$1.2 billion. Global bond market returns were strong in the second quarter after mixed returns in the first quarter. A strong pickup in net U.S. purchases of bonds from Europe more than offset shifts to net U.S. sales of bonds from Caribbean financial centers and Japan.

**Direct investment.** Net financial outflows for U.S. direct investment abroad were \$33.6 billion in the second quarter, up from \$27.0 billion in the first quarter. The increase was attributable to increases in net equity capital outflows and in reinvested earnings and to a decrease in net inflows on intercompany debt. Net equity capital outflows were boosted by U.S. acquisitions of companies in the United Kingdom. A rise in foreign affiliates' earnings contributed to the increase in reinvested earnings. Despite the increase, reinvested earnings remained unusually low for the second consecutive quarter as a result of unusually high distributed earnings. Distributed earnings were elevated in the last two quarters as some U.S. parent companies took advantage of incentives associated with recent legislation that allows them to obtain reduced rates of taxation on distributions of foreign affiliates' earnings for a year (see the box "The Effect of the American Jobs Creation Act of 2004 on U.S. International Transactions").

### Foreign-owned assets in the United States

Net foreign-owned assets in the United States increased \$393.1 billion in the second quarter after an increase of \$243.5 billion in the first quarter. The pickup was mostly attributable to a very large increase in U.S. liabilities reported by U.S. banks in the second quarter after a decrease in the first quarter. In addition, net foreign purchases of U.S. securities other than U.S. Treasury securities picked up. In contrast, U.S. liabilities reported by U.S. nonbanks decreased slightly after a substantial increase, and net foreign purchases of U.S. Treasury securities slowed.

Foreign official assets. Foreign official assets in the United States increased \$82.3 billion in the second quarter after an increase of \$25.3 billion in the first quarter. The second-quarter increase was more similar to the quarterly increases in 2004 after the relatively small first-quarter rise. In the second quarter, the largest increases in official assets were by countries in Asia and in Europe.

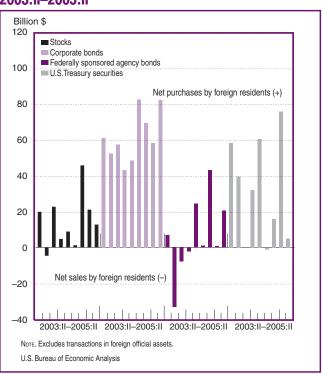

Liabilities reported by banks and by nonbanks. U.S. liabilities reported by U.S. banks and securities brokers, excluding U.S. Treasury securities, increased a record \$168.9 billion in the second quarter, in contrast to a decrease of \$67.7 billion in the first quarter.

Banks' own liabilities denominated in dollars increased \$159.9 billion in the second quarter, in contrast to a decrease of \$81.2 billion in the first quarter. The surge in borrowing was partly related to a strong increase in U.S. bank lending to foreigners and to a pickup in interoffice transfers of funds between banks' home offices and their offices abroad. The increase in liabilities was largely in the form of deposits, mostly by banks in Caribbean financial centers and in Western Europe.

Banks' customers' liabilities denominated in dollars decreased \$9.0 billion, mostly to Europe, after an increase of \$13.2 billion. U.S. liabilities reported by U.S. nonbanking concerns decreased \$0.5 billion, in sharp contrast to an increase of \$93.9 billion. The second-quarter decrease was largely accounted for by decreases in liabilities to the United Kingdom and Caribbean financial centers.

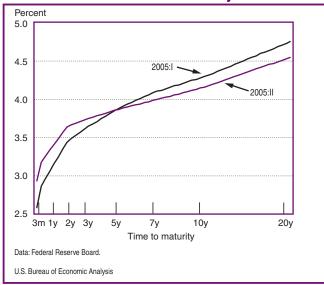

U.S. Treasury securities. Net foreign purchases of U.S. Treasury securities were \$4.9 billion in the second quarter, down sharply from \$75.9 billion in the first quarter (chart 8). The drop was more than accounted for by a shift to net sales by investors in Caribbean financial centers from very large net purchases. The U.S. Treasury securities market outperformed the U.S. stock market, but it underperformed most major foreign government securities markets. The yield

Chart 8. Transactions in U.S. Securities, 2003:II–2005:II

curve for U.S. Treasury securities flattened, as shortterm yields increased because of the tightening of U.S. monetary policy and long-term yields edged lower (chart 9).

**Chart 9. Yield Curve for U.S. Treasury Securities** 

Other U.S. securities. Net foreign purchases of U.S. securities other than U.S. Treasury securities were \$115.3 billion in the second quarter, up from \$80.0 billion in the first quarter. The pickup resulted from increases in net foreign purchases of U.S. corporate bonds and of U.S. federally sponsored agency bonds (chart 8). These increases were partly offset by a decrease in net foreign purchases of U.S. stocks.

Net foreign purchases of U.S. corporate bonds were \$82.3 billion, up from \$58.1 billion. Despite several notable downgrades of U.S. corporate debt, net foreign purchases increased to the second-highest quarterly level on record. Yields on U.S. corporate bonds remained higher than yields on corporate bonds in many foreign markets.

Net foreign purchases of U.S. federally sponsored agency bonds were \$20.4 billion, up from \$0.8 billion. Shifts to net purchases from Asia and Caribbean financial centers were partly offset by a shift to net sales from Europe.

Net foreign purchases of U.S. stocks were \$12.7 billion, down from \$21.2 billion. The U.S. stock market edged up in the second quarter, but it still underperformed most major foreign stock markets for the second consecutive quarter. Transactions by investors in Caribbean financial centers shifted to net sales of U.S. stocks from net purchases, and net purchases by investors in Europe decreased.

Direct investment. Net financial inflows for foreign direct investment in the United States were \$17.6 billion in the second quarter, down from \$35.1 billion in the first quarter. The decrease was almost entirely accounted for by a shift to net outflows on intercompany debt from net inflows. In addition, net equity capital inflows were the lowest in more than a year as a result of a decline in foreign acquisitions of U.S. companies. In contrast, reinvested earnings increased as a result of a rise in U.S. affiliates' earnings and in the share of earnings that were reinvested.

Tables 1 through 11 follow.

# Footnotes to U.S. International Transactions Tables 1–11

General notes for all tables:  $^{\rm p}$  Preliminary.  $^{\rm r}$  Revised.  $^{\rm *}$  Less than \$500,000 (+/–).  $^{\rm D}$  Suppressed to avoid disclosure of data of individual companies. Quarterly estimates are not annualized and are expressed at quarterly rates.

Table 1:

1. Credits, +: Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows—increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned assets (U.S. claims).

Debits, —: Imports of goods and services and income payments; unilateral current transfers to foreigners; capital account transactions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S.-owned assets (U.S. claims).

- 2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2.
- 3. Includes some goods: Mainly military equipment in line 5; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 22; and fuels purchased by airline and steamship operators in lines 8 and 25.
- 4. Includes transfers of goods and services under U.S. military grant programs.
- 5. Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.
- 6. Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.
- 7. At the present time, all U.S. Treasury-owned gold is held in the United States
  - 8. Includes sales of foreign obligations to foreigners.
- 9. Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.
- 10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S. Government corporations and agencies.
- 11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions arranged with or through foreign official agencies; see table 5.
- 12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.
- 13. Conceptually, the sum of line 76 and line 39 is equal to "net lending or net borrowing" in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table 2 in appendix A in this issue of the Survey of Current Business. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.3B of the full set of NIPA tables.

Additional footnotes for historical data in July issues of the Survey:

- 14. For 1974, includes extraordinary U.S. Government transactions with India. See "Special U.S. Government Transactions," June 1974 SURVEY, p. 27.
- 15. For 1978–83, includes foreign currency-denominated notes sold to private residents abroad.
- 16. Break in series. See Technical Notes in the June 1989–90, 1992–95, and July 1996–2005 issues of the Survey.

Table 2:

1. Exports, Census basis, represent transactions values, f.a.s. U.S. port of exportation, for all years; imports, Census basis, represent Customs values (see Technical Notes in the June 1982 Survey), except for 1974–81, when they represent transactions values, f.a.s. foreign port of exportation (see July issues of the Survey for historical data). From 1983 forward, both unadjusted and seasonally adjusted data have been prepared by BEA from "actual" and "revised statistical" monthly data supplied by the Census Bureau (see Techni-

- cal Notes in the December 1985 Survey). Seasonally adjusted data reflect the application of seasonal factors developed jointly by Census and BEA. The seasonally adjusted data are the sum of seasonally adjusted five-digit end-use categories (see technical Notes in the June 1980 Survey, in the June 1988 Survey, and in the June 1991 Survey). Prior to 1983, annual data are as published by the Census Bureau, except that for 1975–80 published Census data are adjusted to include trade between the U.S. Virgin Islands and foreign countries.
- 2. Adjustments in lines A5 and A13, B12, B47, and B82 reflect the Census Bureau's reconciliation of discrepancies between the goods statistics published by the United States and the counterpart statistics published in Canada. These adjustments are distributed to the affected end-use categories in section C. Beginning in 1986, estimates for undocumented exports to Canada, the largest item in the U.S.-Canadian reconciliation, are included in Census basis data shown in line A1.
- 3. Exports of military equipment under U.S. military agency sales contracts with foreign governments (line A6), and direct imports by the Department of Defense and the Coast Guard (line A14), to the extent such trade is identifiable from Customs declarations. The exports are included in tables 1 and 11, line 5 (transfers under U.S. military agency sales contracts); the imports are included in tables 1 and 11, line 22 (direct defense expenditures).
- 4. Addition of electrical energy; deduction of exposed motion picture film for rental rather than sale; net change in stock of U.S.-owned grains in storage in Canada; coverage adjustments for special situations in which shipments were omitted from Census data; deduction of the value of repairs and alterations to foreign-owned equipment shipped to the United States for repair; and the inclusion of fish exported outside of U.S. customs area. Also includes deduction of exports to the Panama Canal Zone before October 1, 1979, and for 1975–82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see July issues of the Survey for historical data).
- 5. Coverage adjustments for special situations in which shipments were omitted from Census data; the deduction of the value of repairs and alterations to U.S.-owned equipment shipped abroad for repair; and the adjustment of software imports to market value. Also includes addition of understatement of inland freight in f.a.s. values of U.S. imports of goods from Canada in 1974–81; deduction of imports from the Panama Canal Zone before October 1, 1979; and for 1975–82, net timing adjustments for goods recorded in Census data in one period but found to have been shipped in another (see July issues of the Survey for historical data).
- 6. For 1988–89, correction for the understatement of crude petroleum imports from Canada.
- 7. Annual and unadjusted quarterly data shown in this table correspond to country and area data in table 11, lines 3 and 20. Trade with international organizations includes purchases of nonmonetary gold from the International Monetary Fund, transfers of tin to the International Tin Council (ITC), and sales of satellites to Intelsat. The memoranda are defined as follows: *Industrial countries*: Western Europe, Canada, Japan, Australia, New Zealand, and South Africa; *Members of OPEC*: Venezuela, Ecuador, Iraq, Iran, Kuwait, Saudi Arabia, Qatar, United Arab Emirates, Indonesia, Algeria, Libya, Nigeria, and Gabon (Excludes Ecuador beginning in January 1993 and Gabon beginning in January 1995.); *Other countries*: Eastern Europe, Latin America and Other Western Hemisphere, and other countries in Asia and Africa, less OPEC. Before 1984, complete geographic area detail was not available for some balance of payments adjustments. Therefore, the detail shown does not always sum to the values shown for the area aggregates. For all years, "Asia" and "Africa" exclude certain Pacific Islands and unidentified countries included in "Other countries in Asia and Africa."
- 8. Includes the former German Democratic Republic (East Germany) beginning in fourth quarter of 1990. In earlier periods, the German Democratic Republic was included in Eastern Europe.
- 9. Beginning in 1986, New Zealand and South Africa are included in "Other countries in Asia and Africa," with New Zealand included as part of "Asia" and South Africa as part of "Africa."
- 10. The "Euro area," which formed in January 1999, includes Austria, Belgium, Finland, France, Germany, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, and from January 2001, Greece.

Table 3:

- 1. Includes royalties, license fees, and other fees associated with the use of intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.
  - 2. Includes royalties, license fees, and other fees associated with the use of

copyrights, trademarks, franchises, rights to broadcast live events, software

licensing fees, and other intangible property rights.

3. Other unaffiliated services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television

4. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

#### Table 4:

- 1. Complete instrument detail is only available beginning with 2003.
- 2. Prior to 2003, includes only demand deposits and nonnegotiable time and savings deposits.

#### Table 5:

- 1. Expenditures to release foreign governments from their contractual liabilities to pay for military goods and services purchased through military sales contracts—first authorized (for Israel) under Public Law 93-199, section 4, and subsequently authorized (for many recipients) under similar legislation—are included in line A4. Deliveries against these military sales contracts are included in line C10; see footnote 2. Of the line A4 items, part of these military expenditures is applied in lines A43 and A46 to reduce short-term assets previously recorded in lines A41 and C8; this application of funds is excluded from lines C3 and C4. A second part of line A4 expenditures finances future deliveries under military sales contracts for the recipient countries and is applied directly to lines A42 and C9. A third part of line A4, disbursed directly to finance purchases by recipient countries from commercial suppliers in the United States, is included in line A37. A fourth part of line A4, representing dollars paid to the recipient countries to finance purchases from countries other than the United States, is included in line A48.
- 2. Transactions under military sales contracts are those in which the Department of Defense sells and transfers military goods and services to a foreign purchaser, on a cash or credit basis. Purchases by foreigners directly from commercial suppliers are not included as transactions under military sales contracts. The entries for the several categories of transactions related to military sales contracts in this and other tables are partly estimated from incomplete data.
- 3. The identification of transactions involving direct dollar outflows from the United States is made in reports by each operating agency.
- 4. Line A38 includes foreign currency collected as interest and line A43 includes foreign currency collected as principal, as recorded in lines A16 and A17, respectively.
- 5. Includes (a) advance payments to the Department of Defense (on military sales contracts) financed by loans extended to foreigners by U.S. Government agencies and (b) the contra-entry for the part of line C10 that was delivered without prepayment by the foreign purchaser. Also includes expenditures of appropriations available to release foreign purchasers from liability to make repayment.
- 6. Includes purchases of loans from U.S. banks and exporters and payments by the U.S. Government under commercial export credit and investment guarantee programs.

  7. Excludes liabilities associated with military sales contracts financed by
- U.S. Government grants and credits and included in line C2.
- 8. Excludes transactions of the U.S. Enrichment Corporation since it became a non-government entity in July 1998.

## Table 6a:

- 1. For bank affiliates, includes only interest on permanent debt investment by their parent companies. Excludes interest between financial parent companies and nonbank financial affiliates.
- 2. For bank affiliates, includes only permanent debt investment by their parent companies. Excludes intercompany debt between financial parent companies and nonbank financial affiliates.

#### Table 7a:

- 1. Beginning with 2005, source data for new issue estimates are no longer separately available. New issues continue to be included in net purchases.
- 2. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

## Table 8a:

1. Prior to 2003, securities brokers' claims on and liabilities to their foreign

- affiliates are included in the estimates. They are excluded beginning in 2003.
- 2. Estimates of commercial claims and liabilities with unaffiliated foreign-
- 3. Complete instrument detail is only available beginning with 2003. 4. Financial intermediaries' accounts are shown under "other claims (liabilities)" because the majority of these claims (liabilities) are in the form of intercompany balances. Financial intermediaries' accounts represent transactions between firms in a direct investment relationship (that is, between U.S. parents and their foreign affiliates or between U.S. affiliates and their foreignparent groups), where both the U.S. and foreign firms are classified in a finance industry, but the firms are neither banks nor securities brokers.
- 5. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

#### Table 9a:

- 1. Beginning with 2003, includes securities brokers' claims on their foreign affiliates.
  - 2. Complete instrument detail is only available beginning with 2003.
- 3. Includes foreign official agencies and international and regional organizations. Prior to 2003, also includes government-owned corporations and state, provincial, and local governments and their agencies.
- 4. U.S.-owned banks include U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers may be U.S.-owned or foreignowned.
- 5. Commercial paper issued in the U.S. market by foreign incorporated entities and held in U.S. customers' accounts. Excludes commercial paper issued through foreign direct investment affiliates in the United States.
- 6. Prior to 2003, includes negotiable certificates of deposit and other negotiable and transferable instruments.
  - 7. Prior to 2003, includes only deposits.
- 8. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

## Table 10a:

- 1. Beginning with 2003, includes securities brokers' liabilities to their foreign affiliates.
  - Complete instrument detail is only available beginning with 2003.
- 3. U.S.-owned banks include U.S.-chartered banks, Edge Act subsidiaries, and U.S. bank holding companies. Foreign-owned banks include U.S. branches and agencies of foreign banks and majority-owned bank subsidiaries in the United States. Brokers and dealers may be U.S.-owned or foreignowned.
- 4. Bahamas, Bermuda, British West Indies (Cayman Islands), and Netherlands Antilles.

#### Table 11:

#### For footnotes 1–13, see table 1.

- 14. The "European Union" includes Belgium, Denmark, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, United Kingdom; beginning with the first quarter of 1995, also includes Austria, Finland, and Sweden; and beginning with the second quarter of 2004, also includes Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia. The "European Union" also includes the European Atomic Energy Community, the European Coal and Steel Community (through the third quarter of 2002), and the European Investment Bank.
  - 15. Quarterly estimates for Mexico are available beginning with 2004.
- 16. Includes, as part of international and unallocated, taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; and net U.S. currency flows. Before 1999, also includes the estimated direct investment in foreign affiliates engaged in international shipping, in operating oil and gas drilling equipment internationally, and in petroleum trading. Before 1996, also includes small transactions in business services that are not reported by country.
  - 17. Details are not shown separately; see totals in lines 56 and 63.
  - 18. Details not shown separately are included in line 69.
- 19. Details for lines 51 and 53 are combined and shown in line 53 for the fourth quarter of 2004 and the year 2004.

October 2005 111

# **State Personal Income**

# Second Quarter of 2005 and Revised Estimates for 2002–2005:I

By David G. Lenze

PERSONAL income for the Nation accelerated in the second quarter of 2005, growing 1.5 percent, according to recent estimates from the Bureau of Economic Analysis. In the first quarter, personal income grew 0.6 percent. Over the last six quarters, the average growth rate was 1.6 percent. Growth in almost all states also accelerated. Only four states (Idaho, New Mexico, Arkansas, and South Dakota) recorded slower growth. In three states (Texas, Louisiana, and North Carolina), the growth rate equaled that of the first quarter. In all states, the growth rate exceeded the 0.8-percent second-quarter inflation rate, as measured by the price index for personal consumption expenditures in the national income and products accounts (NIPAs).

This article discusses second-quarter personal income estimates and presents revised estimates for 2002–2005:I. This article also discusses BEA's new regional treatment of military compensation. See the box "New Treatment of State Estimates of Military Compensation."

# **Personal Income**

## **Earnings**

Nationwide, earnings grew 1.6 percent in the second quarter after growing 1.7 percent in the first quarter. Over the last six quarters, growth in earnings has averaged 1.7 percent. Historically, earnings have accounted for the majority of personal income.

# Acknowledgments

The annual revision of state personal income was prepared by the Regional Economic Measurement Division under the direction of Robert L. Brown, Chief. John W. Ruser, Associate Director for Regional Economics, provided general guidance. The preparation of the revised estimates was a divisionwide effort.

The estimates of nonfarm wages and salaries and supplements to wages and salaries were prepared by the Regional Wage Branch under the supervision of Sharon C. Carnevale, Chief. Major responsibilities were assigned to Elizabeth P. Cologer, John D. Laffman, Michael G. Pilot, Mauricio Ortiz, John A. Rusinko, James M. Scott, and Elizabeth F. Stell. Contributing staff members were Peter Battikha, Michael L. Berry, Kristin M. Chambliss, Susan P. Den Herder, Terence J. Fallon, Tina C. Highfill, Mark W. Hodgins, Russell C. Lusher, Paul K. Medzerian, Katherine M. Yang, Jesse M. Young, and Jaime Zenzano.

The quarterly estimates of state personal income and the annual estimates of farm wages and salaries, farm supplements to wages and salaries, farm proprietors' income, property income, personal current transfer receipts, contributions for government social insurance, and the adjustment for residence were prepared by the Regional Income Branch under the supervision of James M. Zavrel, Chief. Major responsibilities were assigned to Charles A. Jolley, Carrie L. Litkowski, Jeffrey L. Newman, James P. Stehle, and Matthew A. von Kerczek. Contributing staff members were Suet M. Boudhraa, Daniel R. Corrin, Eli F. Dourado, Michelle A. Harder, Katherine E. Harper, Toan A. Ly, Brian J. Maisano, W. Tim McKeel, and Troy P. Watson.

The estimates of personal current tax receipts were prepared by Ann E. Dunbar under the supervision of Robert L. Brown.

The public use tabulations and data files were assembled and the tables were prepared by the Regional Economic Information System Branch under the supervision of Kathy A. Albetski, Chief. Major responsibilities were assigned to Gary V. Kennedy. Contributing staff members were Alison M. Adam, Giselle Cubillos-Moraga, H Steven Dolan, Andre Garber, Michael J. Paris, Callan S. Swenson, and Monique B. Tves.

**Earnings by industry.** Three industries—real estate, professional services, and health care—contributed a third of the total growth in earnings by place of work in the second quarter (table A).

In the second quarter, real estate had the fastest earnings growth, increasing 7.1 percent. The gains

were concentrated in proprietors' income, which grew 11.6 percent in contrast to a 2.7-percent gain in wages and salaries. Proprietors income growth in the real es-

Earnings by place of work is the sum of wage and salary disbursements (payrolls), supplements to wages and salaries, and proprietors' income.
 "Other" consists of the wage and salary disbursements to U.S. residents employed by international organi-

zations and foreign embassies and consulates in the U.S.

3. Data are suppressed to avoid disclosure of confidential information.

4. Not meaningful.

the oil patch (Texas, Oklahoma, and Louisiana) and in other major energy-producing states (Alaska, Wyoming, New Mexico, and West Virginia). Mining contributed from 15 to 33 percent of total earnings growth in these states and put Wyoming and Oklahoma among the 10 states with the largest increases in personal income (chart 1).

Industries with declining earnings include the military, in which earnings fell 1.7 percent. The fall in earnings was due to a slight reduction in the number of activated reservists. Despite the second-quarter fall, the military has been the fastest growing industry in the current expansion, growing 44 percent since the fourth quarter of 2001 (chart 2). Slightly more than half of the increase (27 percentage points) was due to higher average basic pay, and the rest was due to the activation of reservists and the receipt of special items such as combat pay.

The number of active duty personnel and reservists has changed only negligibly since the start of the Afghanistan and Iraq wars. In addition to populous states such as California, Texas, and Florida, the

largest increases in military earnings occurred in Virginia, North Carolina, and Georgia (see the box "New Treatment of State Estimates of Military Compensation").

Earnings in private educational services also fell, but only 0.2 percent. Educational services is one of the smaller industries for which quarterly earnings are published, but this industry reflects broader regional economic and demographic trends. States with relatively fast population growth (such as Nevada, Arizona, Florida, and Idaho) tended to see strong gains in earnings in private educational services, while states with relatively slow economic growth or population loss (such as Michigan, Ohio, and Massachusetts) tended to see declines in earnings in this industry.

The information industry grew 1.8 percent in the second quarter, compared with a 1.7-percent decrease in the first quarter. It is the last industry to surpass its prerecessionary earnings peak in current dollars (chart 2). However, adjusting earnings for inflation, the information industry still has not recovered from the recession of 2001.

Chart 1. Personal Income: Percent Change, 2005:I-2005:II

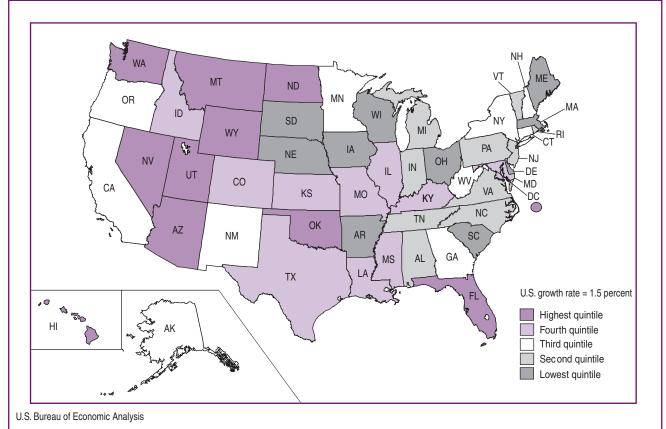

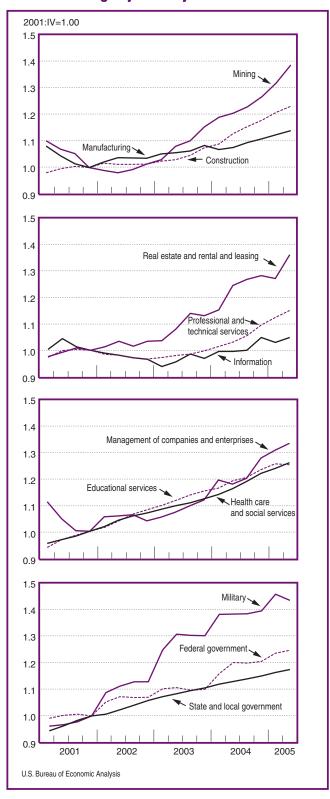

Chart 2. Earnings by Industry Relative to 2001:IV

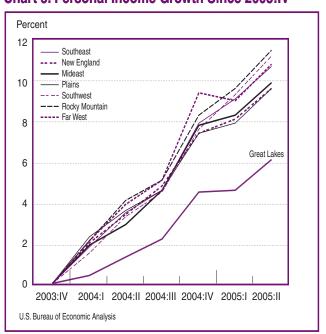

**Earnings by state and region.** The Rocky Mountain and Far West regions grew the fastest of the eight BEA regions in the second quarter: Both grew 1.9 percent. The New England and Great Lakes regions grew the slowest, 1.4 percent.

The professional services and real estate industries were the largest contributors to second-quarter growth in the Rocky Mountain and Far West regions. In the Rocky Mountain region, the construction industry and state and local government were the next largest contributors. In the Far West region, the construction, durable-goods manufacturing, and information industries were the next largest contributors.

In the Great Lakes region, personal income growth has been on a distinctly slower trajectory than growth in the rest of the country for the last year and a half (chart 3). Even the strongest state in the Great Lakes region, Wisconsin, has grown slower than the Plains regional average (the Plains region was the second weakest region). Since the fourth quarter of 2003, earnings by place of work has grown only 6.3 percent in the Great Lakes region, compared with 11.8 percent in the rest of the country, largely because of weakness in the region's durable-goods manufacturing industry.

Earnings increased in 18 states and the District of Columbia.

Chart 3. Personal Income Growth Since 2003:IV

## **New Treatment of State Estimates of Military Compensation**

Military compensation in the national income and product accounts (NIPAs) has long included the compensation of all U.S. military personnel stationed at home and abroad. However, until this year, BEA's state estimates of military compensation included only the compensation of military personnel living in the United States.

BEA's new treatment of military compensation in the calculation of state personal income estimates reflects broad demographic changes in the armed forces and yields a more realistic view of military compensation.

BEA's state estimates of military compensation are based on troop data by base and national estimates of average pay from the Department of Defense (DOD). For 2001–2004, the DOD estimates of troops stationed at U.S. bases do not show a large decrease for troops sent to Afghanistan and Iraq. Those estimates reflect the DOD's new method of reporting active duty military personnel for the Army and the Air Force. The DOD now reports active duty regular military personnel according to the troops' home bases and reserve personnel according to the state of the reservists' bases. However, for the Marines, DOD continues to use an approach that reduces domestic base personnel figures when troops are sent overseas.

Since BEA's state estimates of military earnings reflect the geographic distribution of military personnel as reported by the DOD, the surge in military earnings due to the activation of reservists and the special pay associated with the war is recorded in the states from which the forces were deployed. This practice is consistent with the pay being received by family members at home and with news reports of strong retail sales at affected military bases.

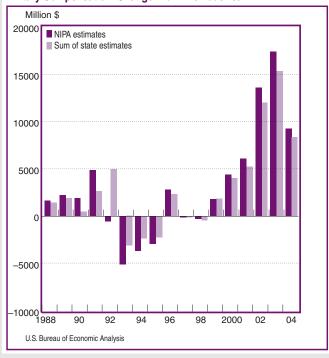

By contrast, in the Persian Gulf war of 1991, Army troops that were deployed to the Persian Gulf were reported by the DOD as being overseas; the Air Force only sent small groups from a large number of bases.

As a result, states with bases from which troops were deployed for the Persian Gulf war showed a corresponding drop in personnel at those bases. Consequently, BEA's local area personal income estimates showed a reduction in military pay in the affected counties. The callup for reservists for this war was not large and was for a relatively short time. Newspaper reports at the time noted a significant decline in business around the bases that sent troops overseas.

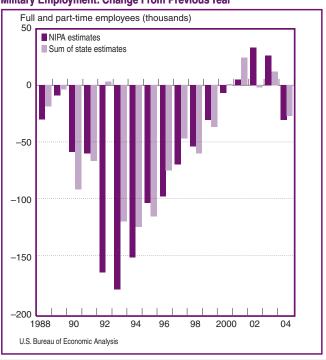

Since the Persian Gulf war, the demographics of the armed forces have evolved, and BEA has changed its military residency definition accordingly. The current Army has a larger proportion of mature troops with families to support, in contrast to the typical young, single soldiers of the past.

A more flexible residency definition maintains consistency between military compensation and observed spending patterns. In 1990 and 1991, military compensation growth (identical to earnings growth because there is no military proprietors' income) as measured in the NIPAs was more than twice as large as the growth measured in state personal income (charts below). At the same time, domestic troop strength fell 50,000 more than worldwide strength fell, as troops were sent overseas. Conversely, at the end of the Persian Gulf war, military compensation and employment grew much faster domestically. In contrast, in the current wars from 2001 to 2004, military compensation in the NIPAs has grown only slightly faster than in state personal income, and domestic troop strength is essentially unchanged.

# Military Employment: Change From Previous Year

<sup>1.</sup> The issues are complicated by a simultaneous downsizing and reallocation of the armed forces associated with the end of the Cold War and several base realignment and closure commissions.

# Other components of personal income

The other main components of personal income grew moderately in the second quarter. Dividends, interest, and rent grew 1.1 percent in the second quarter after falling 5.9 percent in the first quarter. The first-quarter fall reflected the special dividend paid by Microsoft to its shareholders in December 2004, which boosted dividends, interest, and rent in the fourth quarter.

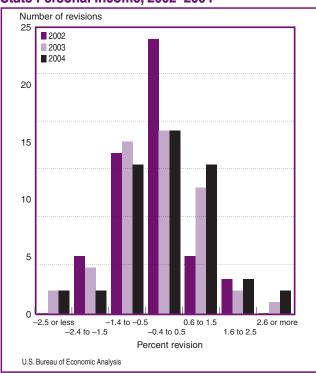

Transfer receipts grew 1.4 percent after growing 2.7 percent. The first-quarter increase reflected cost-of-living increases, which historically have been distributed in the first quarter.

## **Revised Estimates**

# Annual revisions for 2002-2004

The revised estimates for 2002–2004 incorporated the results of the recent annual revision of the national income and product accounts (NIPAs) and newly available state data that are more complete, more detailed, and otherwise more appropriate than those that were previously available.<sup>2</sup> In general, the revisions to the

Chart 4. Frequency Distribution of Revisions to State Personal Income, 2002–2004

personal income estimates that were released in March were relatively small (chart 4).

For 2004, downward revisions to the estimates of personal income for some states offset upward revisions to estimates for other states; the mean average revision was zero (table B). For 2002 and 2003, the average downward revision was 0.2 percent. Very little of the annual revisions were due to revisions in the

3. The NIPA personal income estimates control state personal income estimates: The sum of state personal income estimates must equal the NIPA estimate adjusted for small differences in coverage.

0.2 percent.

In general, most of the revisions in state personal income are attributable to the incorporation of state-level Internal Revenue Service data for dividends, interest, and rent for 2003 and the extrapolation of the data to 2004.

# **Data Availability**

This article presents summary estimates of annual personal income and disposable personal income for 1999–2004, estimates of annual personal income by major source and earnings by industry for 2002–2004, estimates of quarterly personal income for the third quarter of 2001 to the second quarter of 2005, and quarterly personal income by major source and earnings by major industry for the fourth quarter of 2003 to the second quarter of 2005. These estimates and more detailed estimates of personal income and employment for states are available interactively on BEA's Web site.

The following annual state estimates are available at <www.bea.gov/bea/regional/spi>:

- Personal income, per capita personal income, and population for 1929–2004
- Disposable personal income and per capita disposable personal income for 1948–2004
- State income and employment summary for 1958–2004
- State income summary for 1948–57
- Personal income by major source and earnings by industry (North American Industry Classification System (NAICS) three digit) for 2001–2004, (Standard Industrial Classification System (SIC) two digit) for 1958–2000, and (SIC division level) for 1929–57
- Personal income by major source and earnings by major industry (SIC division level) for 2001
- Compensation of employees by industry (NAICS three digit) for 2001–2004 and (SIC two digit) for 1998–2000
- Compensation of employees by industry (SIC division level) for 2001
- Wage and salary disbursements by industry (NAICS three digit) for 2001–2004, (SIC two digit) for 1958–2000, and (SIC division level) for 1929–57
- Wage and salary disbursements by major industry (SIC division level) for 2001
- Full-time and part-time employment by industry (NAICS three digit) for 2001–2004, (SIC two digit) for 1969–2000, and (SIC division level) for 2001
- Full-time and part-time wage and salary employment by industry (NAICS three digit) for 2001–2004, (SIC two digit) for 1969–2000, and (SIC division level) for 2001
- State economic profiles (a selection of personal income and employment data for each state) for 1958–2004
- Personal current transfer receipts by major program

for 1948-2004

- Farm income and expenses (including the major categories of gross receipts and expenses for all farms and for measures of farm income) for 1969–2004
- Personal current taxes by level of government and by type for 1948–2004

The following quarterly state estimates are available at <www.bea.gov/bea/regional/sqpi>:

- Personal income for the first quarter of 1948 to the second quarter of 2005
- Quarterly income summary for the first quarter of 1948 to the second quarter of 2005
- Personal income by major source and earnings by major industry (NAICS two digit) for the first quarter of 2001 to the second quarter of 2005
- Personal income by major source and earnings by major industry (SIC division level) for the first quarter of 1948 to the fourth quarter of 2001
- Compensation of employees by industry (NAICS two digit for the first quarter of 2001 to the second quarter of 2005
- Compensation of employees by industry (SIC division level) for the first quarter of 1998 to the fourth quarter of 2001
- Wage and salary disbursements by major industry (NAICS two digit) for the first quarter of 2001 to the second quarter of 2005
- Wage and salary disbursements by major industry (SIC division level) for the first quarter of 1948 to the fourth quarter of 2001
- In addition, the entire set of estimates for all states will be available in October 2005 on a CD–ROM that includes an updated description of the sources and methods used to estimate state personal income. To order the free CD–ROM *State Personal Income*, 1929–2004 (product number RCN–0552), call the Order Desk at 1–800–704–0415 (outside the United States, call 202–606–9666).

The state personal income estimates are also available through the members of the BEA User Group, which consists of state agencies and universities that help BEA disseminate the estimates in their states. For a list of the BEA User Group on BEA's Web site, go to <www.bea.gov/bea/regional/docs/usergrp.cfm>.

For more information about these estimates, call the Regional Economic Information System at 202–606–5360, fax 202–606–5322, or e-mail reis.remd@bea.gov.

Revisions for three states are notable:

- North Dakota. The largest revision in 2004 was for this state. The state's personal income estimate was revised down 6.9 percent largely because of a lowered estimate of farm proprietors' income.
- Oregon. Supplements to wages and salaries for Oregon were revised up 1.8 percent in 2004. The revision reflects revised source data for employer contributions to government employee pension funds.

Table C. Major New or Revised Source Data in State Personal Income and Personal Current Taxes

Comment of comment in comme		Annual estimates		Quarterly	estimates
Component of personal income	2002	2003	2004	2005:1	2005:11
Wage and salary disbursements by industry	Revised USDA farm labor expenses; new CBP estimates.	Revised QCEW wage data; revised USDA farm labor expenses; new RRB state payroll data; new Official Catholic Directory data; new Census of Governments data.	Revised QCEW wage data; revised DOD personnel and average pay data; revised Coast Guard payroll data; new Official Catholic Directory data; new USDA farm labor expenses.	New QCEW wage data; revised DOD personnel and average pay data; revised Coast Guard payroll data; revised CES data for March; revised Department of Transportation payroll data.	New CES employment and earnings data for April, May, and June 2004; new DOD personnel and average pay data; new Coast Guard payroll data; new Department of Transportation payroll data.
Supplements to wages and salaries by industry	New NASI self-insured benefits data; revised Census Bureau data on contributions to state and local government retirement systems; revised USDA farm labor expenses.	Revised QCEW data on contributions to unemployment insurance funds; revised USDA farm labor expenses; new NAIC earned premium data; new Census Bureau data on contributions to state and local government retirement systems; new Census Bureau data on state-administered workers' compensation programs.	New QCEW data on contributions to unemployment insurance funds; new FRA data on casualties; revised USDA farm labor expenses.		
Farm proprietors' income	Revised USDA estimates of gross income and expenses.	Revised USDA estimates of gross income and expenses.	New USDA estimates of gross income and expenses.	Revised USDA estimates of farm cash receipts for January and February, 2005; new estimates for March 2005.	New USDA estimates of farm cash receipts for April and May 2005.
Nonfarm proprietors' income by industry	New IRS data on net receipts and profits of proprietorships and partnerships				
Dividends, interest, and rent	New ACS data on the aggregate value of dwellings and mobile homes, new IRS income tax data on dividends and taxable interest; revised Census Bureau population data; revised data on gross rental value of farm dwellings.	New ACS data on the aggregate value of dwellings and mobile homes; new IRS income tax data on dividends, taxable interest, S Corporation distributions, and gross rents and royalties; revised Census Bureau population data; revised data on gross rental value of farm dwellings.	New DOD investment income data for military retirees' pensions; new Census Bureau population data; new data on gross rental value of farm dwellings.		
Personal current transfer receipts		New Census Bureau state government finance data on disability and income maintenance payments.	New CMS and DOD medical payments data; new DVA payments to veterans data; new HHS family assistance data; new USDA food stamps data; revised Department of Labor unemployment benefits data.	Revised Department of Labor unemployment benefits data.	New Department of Labor unemployment benefits data.
Employee and self-employed contributions for government social insurance		New SSA data on OASDHI coverage rates for state and local government employees; new Census Bureau data on state temporary disability insurance; revised RRB contributions data	New DVA data on premiums paid for veterans' life insurance; new data on personal contributions for state unemployment insurance.		
Personal current taxes	New IRS income tax data; revised Census Bureau data on quarterly tax collections.	New IRS income tax data; revised Census Bureau data on quarterly tax collections and state tax collections.	New Census Bureau data on quarterly tax collections and state tax collections.

SSA Social Security Administration
USDA U.S. Department of Agriculture

• Washington, DC. Wages and salaries for the District of Columbia were revised up 2.6 percent in 2004. The revision reflects the introduction of newly available data from *County Business Patterns* for 2002, which showed higher-than-expected wages in private education and membership associations and organizations and an adjustment for the difference between Federal wage data from the Office of Personnel Management and wage data from the Quarterly Census of Employment and Wages.

The following components of personal income also incorporated major new state-level source data:

- Farm proprietors' income incorporated new and revised estimates of farm expenses, production income, and government subsidy payments from the U.S. Department of Agriculture.
- Nonfarm proprietors' income incorporated newly available Internal Revenue Service tabulations of

- income tax returns for 2002.
- Current personal transfer receipts incorporated newly available data from the Centers for Medicare and Medicaid Services for 2004.

For more details of the new and revised data, see table C.

## First-quarter 2005 revisions

The estimates for the first quarter of 2005 that were released in June were also revised to incorporate newly available tabulations of wages and salaries of employees covered by state unemployment insurance from the Bureau of Labor Statistics (BLS). Previously, the first-quarter estimates were extrapolated from the fourth-quarter estimates, using employment data from BLS. The average revision to personal income for all states was a downward revision of 0.4 percent (table B).

Note. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

p Preliminary r Revised 1. Percent change was calculated from unrounded data.

Table 2. Annual Personal Income and Per Capita Personal Income by State and Region

Note. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

r Revised

1. Per capita personal income was computed using midyear population estimates of the Bureau of the Census.

2. Percent change was calculated from unrounded data.

Table 3. Disposable Personal Income and Per Capita Disposable Personal Income by State and Region

Nore. The personal income level shown for the United States is derived as the sum of the state estimates tidiffers from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

r Revised

1. Per capita disposable personal income was computed using midyear population estimates of the Bureau of the Census.

2. Percent change was calculated from unrounded data.

Table 4. Personal Income by Major Source

r Revised
D Not shown to avoid disclosure of confidential information, but the estimates for this item are included in the total.
L Less than \$500,000, but the estimates for this item are included in the total.
NA Not available.

 <sup>1.</sup> The industry classification uses the 2002 North American Industry Classification System (NAICS).
 2. Midyear population estimates of the Bureau of the Census.
 3. Per capita personal income is total personal income divided by total midyear population.
 4. Contributions for government social insurance are included in earnings by type and industry, but they are excluded from personal income.

<sup>5.</sup> The adjustment for residence is the net inflow of the earnings of interarea commuters. For the United States, it consists of adjustments for border workers: Wage and salary disbursements to U.S. residents commuting to Canada less wage and salary disbursements to Canadan and Mexican residents commuting into the United States.

6. Rental income of persons includes the capital consumption adjustment.

7. Proprietors' income includes the inventory valuation adjustment and the capital consumption adjustment.

8. "Other" consists of the wage and salary disbursements of U.S. residents employed by international organizations and foreign embassies and consulates in the United States.

Nore. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

Table 5. Personal Income by Major Source

[Millions of dollars,

p Preliminary
r Revised
D Not shown to avoid disclosure of confidential information, but the estimates for this item are included in the total.
1. The estimates of earnings are based on the 2002 North American Industry Classification System (NAICS).
2. Contributions for government social insurance are included in earnings by type and industry, but they are excluded from personal income.
3. The adjustment for residence is the net inflow of the earnings of interarea commuters. For the United States, it consists of adjustments for border workers: Wage and salary disbursements to U.S. residents commuting to Canada less

wage and salary disbursements to Canadian and Mexican residents commuting into the United States.

4. Rental income of persons includes the capital consumption adjustment.

5. Proprietors' income includes the inventory valuation adjustment and the capital consumption adjustment.

6. "Other" consists of the wage and salary disbursements of U.S. residents employed by international organizations and foreign embassies and consulates in the United States.

Note. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

### **BEA Current and Historical Data**

### National, International, and Regional Data

A selection of estimates from the national, industry, international, and regional accounts of the Bureau of Economic Analysis (BEA) are presented in this section. BEA's estimates are not copyrighted and may be reprinted without BEA's permission, and citing the Survey of Current Business and BEA as the source is appreciated.

More detailed estimates from BEA's accounts are available on BEA's Web site at <www.bea.gov>. These estimates are available in a variety of formats, including interactive access. In addition, news releases, articles, and other information, including methodologies and working papers, are available.

The tables present annual [A], quarterly [Q], and monthly [M] data.

#### **National Data**

#### A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components that were released on September 29, 2005. These estimates include the "final" estimates for the second quarter of 2005.

The selected set presents quarterly estimates

that are updated monthly. Annual estimates are presented in most of the tables.

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to <www.bea.gov>, and subscribe. The "Selected NIPA Tables" are available later that day.

Nore. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-follar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

Final sales of domestic product	7	10,303.6	10,702.4	10,637.4	10,757.1	10,846.0	10,940.3	11,089.2	

Nore. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

<sup>1.</sup> The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.

2. Excludes software "embedded," or bundled, in computers and other equipment.

Note. The residual line is the difference between the first line and the sum of the most detailed lines.

<sup>1.</sup> Exports of goods and services and income receipts deflated by the implicit price deflator for imports of goods and

miscellaneous payments, and consumption of fixed capital.

2. Consists of gross national factor income less consumption of fixed capital.

 <sup>1.</sup> Gross domestic income deflated by the implicit price deflator for gross domestic product.
 2. Gross national income deflated by the implicit price deflator for gross national product.
 3. Net domestic income deflated by the implicit price deflator for net domestic product.
 Nore. Except as noted in footnotes 1, 2 and 3, chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

services and income payments.

2. Ratio of the implicit price deflator for exports of goods and services and income receipts to the corresponding implicit price deflator for imports divided by 100.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-

dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100.

JU.
4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital IVA Inventory valuation adjustment CCAdj Capital consumption adjustment

<sup>1.</sup> The implicit price deflator for gross value added of nonfinancial corporate business divided by 100. Estimates for nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

Nore. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

<sup>1.</sup> Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

 <sup>1.</sup> Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Nors. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-tollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

al. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

<sup>1.</sup> Government consumption expenditures are services (such as education and national detense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Nors. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
 Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

<sup>1.</sup> National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and soft-

ware).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

Investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

 <sup>2.</sup> Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account

investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

	1									

tomotive consumer goods.

Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregates series; accurate estimates of these contributions are shown in table 4.2.2. and real growth rates arown in table 4.2.1.

3. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomorphy consumer ponds.

<sup>3.</sup> Includes parts or louds, lettus, and belonges, or locations.

Note: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2000) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

<sup>1.</sup> Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

3. Excludes software "embedded", or bundled, in computers and other equipment.

4. Includes communication equipment, normedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

8. Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

This series is derived from the Census Bureau series "current cost inventories."
 The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS)

structures	29	3.66	3.69	3.72	3.73	3.64		

<sup>1.</sup> Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and space rent for owner-occupied housing. It includes a small amount of final sales by farm and by government enterprises.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

I. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.
 Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and space rent for owner-occupied housing. It includes a small amount of final sales by farm and by government enterprises.

Nore: Estimates in this table are based on the North American Industry Classification System (NAICS). Chained (2000) dollar inventory series are calculated to ensure that the chained (2000) dollar change in inventories for 2000 equals the current-dollar change in inventories for 2000 and that the average of the 1999 and 2000 end-of-year chainweighted and fixed-weighted inventories are equal.

 Consists of personal consumption expenditures, private fixed investment, and gross government investment.

<sup>1.</sup> Consists of used light trucks only.
2. Consists of final sales and change in private inventories of new autos assembled in the United States.
3. Consists of personal consumption expenditures, private fixed investment, and gross government investment.
Nors. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

October 2005 D-46

p Preliminary.
r Revised.
CCAgi Capital consumption adjustment.
IVA Inventory valuation adjustment.
1. Consists of nonmortgage interest paid by households.

Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.
 Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual estimate is the average of the monthly estimates.

Source: U.S. Bureau of Economic Analysis.

The estimates in this table were published in tables 1 and 4 in "Annual Industry Accounts: Advance Estimates for 2004" in the May 2005 Survey.

Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The value of not allocated by industry reflects the difference between the first line and the sum of the most detailed lines, as well as the differences in source data used to estimate GDP by industry and the expenditures measure of real GDP.

2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

<sup>3.</sup> Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.
4. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

Note. Estimates in this table are based on the 1997 North American Industry Classification System (NAICS).

D-48 October 2005

# C. Historical Measures

This table is derived from the "Selected NIPA Tables" that are published in this issue and from the "GDP and Other Major NIPA Series" tables that were published in the August 2005 issue. (The changes in prices are calculated from indexes expressed to three decimal places.)

Table C.1. GDP and Other Major NIPA Aggregates—Continues

[Quarterly estimates are seasonally adjusted at annual rates]

p Preliminary
r Revised
1. Reflects adjustments necessary to bring the Census Bureau's component data in line with the concepts and defini-

tions used to prepare BEA's international and national accounts.
2. Contains goods that cannot be separately identified.

p Preliminary Revised

 Includes royalties, license fees, and other fees associated with the use of intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.
 Includes royalties, license fees, and other fees associated with the use of copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intangible property rights

3. Other unaffiliated services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

4. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

Source: Table 3 in "U.S. International Transactions: Second Quarter of 2005" in the October 2005 SURVEY OF CURRENT

#### Footnotes to Tables E.2. and E.3.

- 1. Credits, +: Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows-increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned
- assets (U.S. claims).

  Debits, -: Imports of goods and services and income payments; unilateral current transfers to foreigners; capital account transactions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S. owned assets (U.S.
- calmis).

  2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2 in "U.S. International Transactions: Second Quarter of 2005" in the October 2005 Survey or Current Business.

  3. Includes some goods: Mainly military equipment in line 5; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 22; and fuels purchased by airline and steamship operators in lines 8 and 55.

- Includes transfers of goods and services under U.S. military grant programs.
   Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.
   Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.
   At the present time, all U.S. Treasury-owned gold is held in the United States.
   Includes sales of foreign obligations to foreigners.
   Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.

- notes. 10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S.
- Government corporations and agencies.

  11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions

- arranged with or through foreign official agencies; see table 5 in "U.S. International Transactions: Second Quarter of 2005" in the October 2005 Survex.
- 12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local govern-
- 12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments.

  13. Conceptually, the sum of line 76 and line 39 is equal to "net lending or net borrowing" in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans expectle line insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table 2 in appendix A in the Survey. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.3B of the full set of NIPA tables.

  Additional footnotes to Table E.3:

  14. The "European Union" includes Belgium, Denmark, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, United Kingdom; beginning with the first quarter of 1995, also includes Austria, Firland, and Sweden; and beginning with the second quarter of 2004, also includes Cyprus. Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia. The "European Union" also includes the European Atomic Energy Community, the European Coal and Steel Community (through the third quarter of 2002), and the European Investment Bank.

  15. Quarterly estimates for Mexico are available, beginning with 204.

  16. Includes, as part of international and unallocated, taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; and net U.S. currency flows. Before 1999, also includes the estimated direct investment in foreig

# **Regional Data**

## H. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross state product. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income are available on CD–ROM. For information on state personal income, e-mail reis.remd@bea.gov; write to the Regional Economic Information System, BE–55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202–606–5360. For information on gross state product, e-mail gspread@bea.gov; write to the Regional Economic Analysis Division, BE–61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202–606–5340.

Table H.1. Personal Income by State and Region

[Millions of dollars, seasonally adjusted at annual rates]

Per capita personal income was computed using midyear population estimates of the Bureau of the Census.
 Percent change was calculated from unrounded data.
 Nore: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the

methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 2 "State Personal Income: Second Quarter of 2005 and Revised Estimates for 2002–2005:1" in the October 2005 issue of the Survey.

Per capita disposable personal income was computed using midyear population estimates of the Bureau of the Census.
 Percent change was calculated from unrounded data.
 Nore. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from

the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. Source: Table 3 "State Personal Income: Second Quarter of 2005 and Revised Estimates for 2002–2005:1" in the October 2005 issue of the Surver.

Note. Totals shown for the United States differ from the national income and product account estimates of gross domestic product (GDP) because GSP excludes and GDP includes the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and for mili-

tary equipment except office equipment. GSP and GDP also have different revision schedules.

Source: This table reflects the GSP estimates for 2003 that were released on June 23, 2005. Detailed estimates are available on BEA's Web site at <www.bea.gov>.

Per capita personal income was computed using Census Bureau midyear population estimates.
 Percent change calculated from unrounded data.
 The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

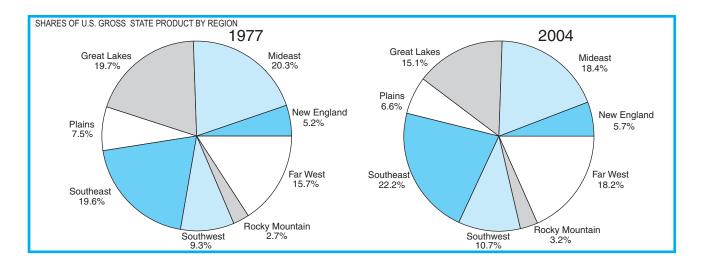

<sup>4.</sup> The metropolitan area definitions used by BEA for its personal income estimates are the new county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004 and February 2005) for Federal statistical purposes.

## **Additional Information About the NIPA Estimates**

#### **Statistical Conventions**

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year—at present, the year 2000—equal to 100.1

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2001–2002 uses prices for 2001 and 2002 as weights, and the 2001-2002 annual percent change in the GDP price index uses quantities for 2001 and 2002 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding "chain-type" price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated "chained (2000) dollar estimates." For most series, these estimates are computed by multiplying the current-dollar value in 2000 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2000 and if real output for this component increased by 10 percent in 2001, then the chained (2000) dollar value of this component in 2001 would be \$110 (\$100  $\times$  1.10). The percent changes calculated from the chained (2000) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a "residual" line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[ \left( \frac{x_t}{x_0} \right)^{m/n} - 1 \right] \times 100$$

where r is the percent change at an annual rate;  $x_t$  is the level of activity in the later period;  $x_o$  is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, t-0).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

#### Appendix B

# Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. In addition, most of this information is available on BEA's Web site at <www.bea.gov>. Look under "Methodologies"; for articles from the Survey of Current Business, look under "Publications."

#### **National accounts**

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of wealth and related estimates.

National income and product accounts (NIPAs). This series of papers documents the conceptual framework of the NIPAs and the methodologies that have been used to prepare the estimates.

An Introduction to National Economic Accounting (1985) [also in the March 1985 Survey]

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (2002)

Government Transactions (1988)

Personal Consumption Expenditures (1990)

The methodologies described in these papers have been updated and improved, typically as part of the comprehensive and annual revisions of the NIPAs.

The following SURVEY articles describe the most recent comprehensive revision of the NIPAs.

"Improved Estimates of the National Income and Product Accounts for 1929–2002: Results of the Comprehensive Revision" (February 2004)

"Preview of the Revised NIPA Estimates for 1997 Effects of Incorporating the 1997 Benchmark I-O Accounts and Proposed Definitional and Statistical Changes" (January 2003)

"Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts"

Changes in Definitions and Classifications (June 2003)

New and Redesigned Tables (August 2003) Statistical Changes (September 2003) In addition, see the following articles.

"Annual Revision of the National Income and Product Accounts" (August 2005).

"Updated Summary NIPA Methodologies" (November 2004) describes the source data and the methods that are used to prepare the current-dollar and real estimates of GDP.

"Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

"Measuring the Services of Commercial Banks in the NIPAs: Changes in Concepts and Methods" (September 2003)

"Measuring the Services of Property-Casualty Insurance in the NIPAs: Changes in Concepts and Methods" (October 2003)

"Reliability of the NIPA Estimates of U.S. Economic Activity" (February 2005) evaluates the principal NIPA estimates by examining the record of revisions to them.

Fixed assets and consumer durable goods. Fixed Assets and Consumer Durable Goods in the United States, 1925–97 (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 1925–2002" (May 2004) describes the improvements that were incorporated into these estimates as part of the comprehensive NIPA revision. "Fixed Assets and Consumer Durable Goods for 1993–2003" (September 2004) describes additional improvements that were incorporated into these estimates as part of the annual NIPA revision.

#### Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and the latest update to its strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at <www.bea.gov> under "About BEA."

#### **Industry accounts**

The industry accounts consist of the input-output accounts, the gross-domestic-product-by-industry accounts, and one satellite account.

"Improved Annual Industry Accounts for 1998–2003" (June 2004) describes the comprehensive revision of the annual input-output accounts and the GDP-by-industry accounts that features the integration of the two sets of accounts.

In addition, see the following articles.

"Preview of the Benchmark Input-Output Accounts for 2002" (September 2005) includes the proposed new sectors that are based on the 2002 North American Industry Classification System.

"Preview of the Comprehensive Revision of the Annual Industry Accounts: Integrating the Annual Input-Output Accounts and the Gross-Domestic-Product-by-Industry Accounts" (March 2004) provides the details about the comprehensive revision.

"Annual Industry Accounts" (January 2005)

"Benchmark Input-Output Accounts for the U.S. Economy, 1997" (December 2002)

**Satellite accounts.** These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

"U.S. Travel and Tourism Satellite Accounts" For 1996 and 1997 (July 2000) For 1998–2003 (September 2004) For 2001–2004 (June 2005)

#### International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts (ITAs). The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used to prepare the estimates in the ITAs and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the ITAs.

The annual revisions of the ITAs are described in a series of articles, the latest of which was published in the July 2005 Survey.

**Direct investment.** International Direct Investment: Studies by the Bureau of Economic Analysis (1999) is a collection of previously published articles on U.S. direct investment abroad and foreign direct investment in the United States. It also includes the following information.

The "Methodology for U.S. Direct Investment Abroad," which is also available in U.S. Direct

Investment Abroad: 1994 Benchmark Survey, Final Results (1998)

"A Guide to BEA Statistics on U.S. Multinational Companies," which is also available in the March 1995 Survey

"A Guide to BEA Statistics on Foreign Direct Investment in the United States," which is also available in the February 1990 SURVEY

In addition, the updated methodology for foreign direct investment in the United States is available in Foreign Direct Investment in the United States: Final Results From the 1997 Benchmark Survey (2001).

International services. U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.

"Selected Issues in the Measurement of U.S. International Services" (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services and explores possible actions to address these issues.

### Regional accounts

The regional accounts include estimates of personal income and gross state product.

**Personal income.** Estimates of personal income are prepared for states and for local areas.

"Comprehensive Revision of State Personal Income for 1969–2003" (May 2004) describes the improvements in the methodology that are used to prepare the estimates and that are part of a comprehensive revision.

"The Reliability of the State Personal Income Estimates" (December 2003) evaluates the estimates of state personal income and of selected components by examining the revisions of these estimates.

"Comprehensive Revision of Local Area Personal Income for 1969–2002" (June 2004) summarizes the improvements in the methodology that is used to prepare the estimates for counties and metropolitan areas. The detailed methodology is available on the CD–DOM Regional Economic Information System, 1969–2003.

Gross state product. "Comprehensive Revision of Gross State Product" (January 2005) summarizes the sources and the methods that are used to prepare the estimates.

"Gross State Product by Industry for 1997–2004" (July 2005) presents the most recent annual revision of these estimates.

D-2 October 2005

## **National Data**

#### A. Selected NIPA Tables

The selected set of NIPA tables presents the most recent estimates of gross domestic product (GDP) and its components that were released on September 29, 2005. These estimates include the "final" estimates for the second quarter of 2005.

The selected set presents quarterly estimates

that are updated monthly. Annual estimates are presented in most of the tables.

The GDP news release is available on BEA's Web site within minutes after the release. To receive an e-mail notification of the release, go to <www.bea.gov>, and subscribe. The "Selected NIPA Tables" are available later that day.

Nore. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-follar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

trial Classification (STC), later estimates for those incomments are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. For some components of final sales of computers, includes computer parts.

Equals gross domestic product excluding gross value added of households and institutions and of general government.
 Equals gross domestic business value added excluding gross farm value added.
 Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.
 Equals compensation of general government employees plus general government consumption of fixed capital.

trial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. Includes government consumption expenditures, which are for services (such as education and national defense) produced by government. In current dollars, these services are valued at their cost of production.

3. For some components of final sales of computers, includes computer parts.

Nors: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line following change in private inventories; the residual line following structures to the difference between gross domestic product and the sum of final sales of domestic product and the sum of the detailed lines of goods, of services, and of structures.

Equals gross domestic product excluding gross value added of households and institutions and of general government.
 Equals gross domestic business value added excluding gross farm value added.
 Equals compensation of employees of nonprofit institutions, the rental value of nonresidential fixed assets owned and used by nonprofit institutions serving households, and rental income of persons for tenant-occupied housing owned by nonprofit institutions.

A Equals compensation of accessing the compensatio

Equals compensation of general government employees plus general government consumption of fixed capital.

Nore. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

<sup>1.</sup> The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 1.5.2 and real growth rates are shown in table 1.5.1.

2. Excludes software "embedded," or bundled, in computers and other equipment.

Note. The residual line is the difference between the first line and the sum of the most detailed lines.

<sup>1.</sup> Exports of goods and services and income receipts deflated by the implicit price deflator for imports of goods and

miscellaneous payments, and consumption of fixed capital.

2. Consists of gross national factor income less consumption of fixed capital.

 <sup>1.</sup> Gross domestic income deflated by the implicit price deflator for gross domestic product.
 2. Gross national income deflated by the implicit price deflator for gross national product.
 3. Net domestic income deflated by the implicit price deflator for net domestic product.
 Nore. Except as noted in footnotes 1, 2 and 3, chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

services and income payments.

2. Ratio of the implicit price deflator for exports of goods and services and income receipts to the corresponding implicit price deflator for imports divided by 100.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-

dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive.

Estimates for financial corporate business and nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

2. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

3. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100.

JU.
4. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross product and the consumption of fixed capital IVA Inventory valuation adjustment CCAdj Capital consumption adjustment

<sup>1.</sup> The implicit price deflator for gross value added of nonfinancial corporate business divided by 100. Estimates for nonfinancial corporate business for 2000 and earlier periods are based on the 1987 Standard Industrial Classification (SIC); later estimates for these industries are based on the North American Industry Classification System (NAICS).

Nore. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

<sup>1.</sup> Consists of gasoline, fuel oil, and other energy goods and of electricity and gas.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

 <sup>1.</sup> Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 2. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Nors. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-tollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

al. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Government consumption expenditures are services (such as education and national defense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

<sup>1.</sup> Government consumption expenditures are services (such as education and national detense) produced by government that are valued at their cost of production. Excludes government sales to other sectors and government investment (construction and software).
2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software in table 3.9.5.

Nors. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and software).
 Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.
 Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

<sup>1.</sup> National defense consumption expenditures are defense services produced by government that are valued at their cost of production. Excludes government sales to other sectors and government own-account investment (construction and soft-

ware).

2. Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.

3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account investment.

Investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

 <sup>2.</sup> Consumption of fixed capital, or depreciation, is included in government gross output as a partial measure of the services of general government fixed assets; the use of depreciation assumes a zero net return on these assets.
 3. Includes general government intermediate inputs for goods and services sold to other sectors and for own-account

investment.

4. Own-account investment is measured in current dollars by compensation of general government employees and related expenditures for goods and services and is classified as investment in structures and in software.

5. Gross government investment consists of general government and government enterprise expenditures for fixed assets; inventory investment is included in government consumption expenditures.

Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

<sup>1.</sup> Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. Consists of capital transfers and the acquisition and disposal of nonproduced nonfinancial assets.

Table 4.2.1. Percent Change From Preceding Period in Real Exports and in Real Imports of Goods and Services by Type of Product

	1								

tomotive consumer goods.

Exports and imports of certain goods, primarily military equipment purchased and sold by the Federal Government, are included in services. Beginning with 1986, repairs and alterations of equipment are reclassified from goods to services.

2. The quantity index for computers can be used to accurately measure the real growth of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregates series; accurate estimates of these contributions are shown in table 4.2.2. and real growth rates arown in table 4.2.1.

3. Includes parts of foods, feeds, and beverages, of nondurable industrial supplies and materials, and of nondurable nonautomotive consumer nonds.

<sup>3.</sup> Includes parts or louds, lettus, and belonges, or locations.

Note: Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. For exports and for imports, the residual line is the difference between the aggregate line and the sum of the most detailed lines.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

Chained (2000) dollar series for real change in private inventories are calculated as the period-to-period change in chained-dollar end-of-period inventories. Quarterly changes in end-of-period inventories are stated at annual rates. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

<sup>1.</sup> Consists primarily of religious, educational, vocational, lodging, railroads, farm, and amusement and recreational structures, net purchases of used structures, and brokers' commissions on the sale of structures.

2. The quantity index for computers can be used to accurately measure the real growth rate of this component. However, because computers exhibit rapid changes in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series; accurate estimates of these contributions are shown in table 5.3.2 and real growth rates are shown in table 5.3.1.

3. Excludes software "embedded", or bundled, in computers and other equipment.

4. Includes communication equipment, normedical instruments, medical equipment and instruments, photocopy and related equipment, and office and accounting equipment.

5. Consists primarily of furniture and fixtures, agricultural machinery, construction machinery, mining and oilfield machinery, service industry machinery, and electrical equipment not elsewhere classified.

6. Consists primarily of manufactured homes, improvements, dormitories, net purchases of used structures, and brokers' commissions on the sale of residential structures.

7. Excludes net purchases of used structures and brokers' commissions on the sale of structures.

8. Note. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines.

This series is derived from the Census Bureau series "current cost inventories."
 The inventory valuation adjustment (IVA) shown in this table differs from the IVA that adjusts business incomes. The IVA in this table reflects the mix of methods (such as first-in, first-out and last-in, first-out) underlying inventories derived primarily from Census Bureau statistics (see footnote 1). This mix differs from that underlying business income derived primarily from Internal Revenue Service statistics.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS)

<sup>1.</sup> Inventories are as of the end of the quarter. The quarter-to-quarter change in inventories calculated from current-dollar inventories in this table is not the current-dollar change in private inventories component of GDP. The former is the difference between two inventory stocks, each valued at its respective end-of-quarter prices. The latter is the change in the physical volume of inventories valued at average prices of the quarter. In addition, changes calculated from this table are at quarterly rates, whereas, the change in private inventories is stated at annual rates.

2. Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and space rent for owner-occupied housing. It includes a small amount of final sales by farm and by government enterprises.

Note. Estimates in this table are based on the North American Industry Classification System (NAICS).

I. Inventories are as of the end of the quarter. The quarter-to-quarter changes calculated from this table are at quarterly rates, whereas the change in private inventories component of GDP is stated at annual rates.
 Quarterly totals at monthly rates. Final sales of domestic business equals final sales of domestic product less gross output of general government, gross value added of nonprofit institutions, compensation paid to domestic workers, and space rent for owner-occupied housing. It includes a small amount of final sales by farm and by government enterprises.

Nore: Estimates in this table are based on the North American Industry Classification System (NAICS). Chained (2000) dollar inventory series are calculated to ensure that the chained (2000) dollar change in inventories for 2000 equals the current-dollar change in inventories for 2000 and that the average of the 1999 and 2000 end-of-year chainweighted and fixed-weighted inventories are equal.

 Consists of final sales and change in private inventories of new autos assembled in the United States.
 Consists of personal consumption expenditures, private fixed investment, and gross government investment.

<sup>1.</sup> Consists of used light trucks only.
2. Consists of final sales and change in private inventories of new autos assembled in the United States.
3. Consists of personal consumption expenditures, private fixed investment, and gross government investment.
Nors. Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The residual line is the difference between the first line and the sum of the most detailed lines, excluding the lines in the addenda.

October 2005 D-46

## **B. Other NIPA and NIPA-Related Tables**

Table B.1 presents the most recent estimates of personal income and its components and the disposition of personal income. These estimates were released on September 30, 2005.

p Preliminary.
r Revised.
CCAgi Capital consumption adjustment.
IVA Inventory valuation adjustment.
1. Consists of nonmortgage interest paid by households.

Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.
 Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual estimate is the average of the monthly estimates.

Source: U.S. Bureau of Economic Analysis.

The estimates in this table were published in tables 1 and 4 in "Annual Industry Accounts: Advance Estimates for 2004" in the May 2005 SURVEY.

Chained (2000) dollar series are calculated as the product of the chain-type quantity index and the 2000 current-dollar value of the corresponding series, divided by 100. Because the formula for the chain-type quantity indexes uses weights of more than one period, the corresponding chained-dollar estimates are usually not additive. The value of not allocated by industry reflects the difference between the first line and the sum of the most detailed lines, as well as the differences in source data used to estimate GDP by industry and the expenditures measure of real GDP.

2. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

<sup>3.</sup> Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

4. Consists of computer and electronic products; publishing industries (includes software); information and data processing services; and computer systems design and related services.

Note. Estimates in this table are based on the 1997 North American Industry Classification System (NAICS).

D-48 October 2005

## C. Historical Measures

This table is derived from the "Selected NIPA Tables" that are published in this issue and from the "GDP and Other Major NIPA Series" tables that were published in the August 2005 issue. (The changes in prices are calculated from indexes expressed to three decimal places.)

p Preliminary
r Revised
1. Reflects adjustments necessary to bring the Census Bureau's component data in line with the concepts and defini-

tions used to prepare BEA's international and national accounts.
2. Contains goods that cannot be separately identified.

p Preliminary Revised

 Includes royalties, license fees, and other fees associated with the use of intangible assets, including patents, trade secrets, and other proprietary rights, that are used in connection with the production of goods.
 Includes royalties, license fees, and other fees associated with the use of copyrights, trademarks, franchises, rights to broadcast live events, software licensing fees, and other intangible property rights

3. Other unaffiliated services receipts (exports) include mainly film and television tape rentals and expenditures of foreign residents temporarily working in the United States. Payments (imports) include mainly expenditures of U.S. residents temporarily working abroad and film and television tape rentals.

4. These reflect the amount of premiums explicitly charged by, or paid to, insurers and reinsurers.

Source: Table 3 in "U.S. International Transactions: Second Quarter of 2005" in the October 2005 SURVEY OF CURRENT

#### Footnotes to Tables E.2. and E.3.

- 1. Credits, +: Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows-increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned
- assets (U.S. claims).

  Debits, -: Imports of goods and services and income payments; unilateral current transfers to foreigners; capital account transactions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S. owned assets (U.S.
- calmis).

  2. Excludes exports of goods under U.S. military agency sales contracts identified in Census export documents, excludes imports of goods under direct defense expenditures identified in Census import documents, and reflects various other adjustments (for valuation, coverage, and timing) of Census statistics to balance of payments basis; see table 2 in "U.S. International Transactions: Second Quarter of 2005" in the October 2005 Survey or Current Business.

  3. Includes some goods: Mainly military equipment in line 5; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies in line 22; and fuels purchased by airline and steamship operators in lines 8 and 55.

- Includes transfers of goods and services under U.S. military grant programs.
   Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents.
   Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government.
   At the present time, all U.S. Treasury-owned gold is held in the United States.
   Includes sales of foreign obligations to foreigners.
   Consists of bills, certificates, marketable bonds and notes, and nonmarketable convertible and nonconvertible bonds and notes.

- notes. 10. Consists of U.S. Treasury and Export-Import Bank obligations, not included elsewhere, and of debt securities of U.S.
- Government corporations and agencies.

  11. Includes, primarily, U.S. Government liabilities associated with military agency sales contracts and other transactions

- arranged with or through foreign official agencies; see table 5 in "U.S. International Transactions: Second Quarter of 2005" in the October 2005 Survex.
- 12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local govern-
- 12. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and State and local governments.

  13. Conceptually, the sum of line 76 and line 39 is equal to "net lending or net borrowing" in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of gold, (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans expectle line insurance carriers and private noninsured pension plans. A reconciliation of the balance on goods and services from the international accounts and the NIPA net exports appears in reconciliation table 2 in appendix A in the Survey. A reconciliation of the other foreign transactions in the two sets of accounts appears in table 4.3B of the full set of NIPA tables.

  Additional footnotes to Table E.3:

  14. The "European Union" includes Belgium, Denmark, France, Germany (includes the former German Democratic Republic (East Germany) beginning in the fourth quarter of 1990), Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, United Kingdom; beginning with the first quarter of 1995, also includes Austria, Firland, and Sweden; and beginning with the second quarter of 2004, also includes Cyprus. Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia, and Slovenia. The "European Union" also includes the European Atomic Energy Community, the European Coal and Steel Community (through the third quarter of 2002), and the European Investment Bank.

  15. Quarterly estimates for Mexico are available, beginning with 204.

  16. Includes, as part of international and unallocated, taxes withheld; current-cost adjustments associated with U.S. and foreign direct investment; and net U.S. currency flows. Before 1999, also includes the estimated direct investment in foreig

# **Regional Data**

## H. State and Regional Tables

The tables in this section include the most recent estimates of state personal income and gross state product. The sources of these estimates are noted.

The quarterly and annual estimates of state personal income are available on CD–ROM. For information on state personal income, e-mail reis.remd@bea.gov; write to the Regional Economic Information System, BE–55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202–606–5360. For information on gross state product, e-mail gspread@bea.gov; write to the Regional Economic Analysis Division, BE–61, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, DC 20230; or call 202–606–5340.

Table H.1. Personal Income by State and Region

[Millions of dollars, seasonally adjusted at annual rates]

Per capita personal income was computed using midyear population estimates of the Bureau of the Census.
 Percent change was calculated from unrounded data.
 Nore: The personal income level shown for the United States is derived as the sum of the state estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the

methodologies used to prepare the estimates, and in the timing of the availability of source data.

Source: Table 2 "State Personal Income: Second Quarter of 2005 and Revised Estimates for 2002–2005:1" in the October 2005 issue of the Survey.

Per capita disposable personal income was computed using midyear population estimates of the Bureau of the Census.
 Percent change was calculated from unrounded data.
 Nore. The personal income level shown for the United States is derived as the sum of the state estimates. It differs from

the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. Source: Table 3 "State Personal Income: Second Quarter of 2005 and Revised Estimates for 2002–2005:1" in the October 2005 issue of the Surver.

Note. Totals shown for the United States differ from the national income and product account estimates of gross domestic product (GDP) because GSP excludes and GDP includes the compensation of Federal civilian and military personnel stationed abroad and government consumption of fixed capital for military structures located abroad and for mili-

tary equipment except office equipment. GSP and GDP also have different revision schedules.

Source: This table reflects the GSP estimates for 2003 that were released on June 23, 2005. Detailed estimates are available on BEA's Web site at <www.bea.gov>.

D-74 October 2005

Per capita personal income was computed using Census Bureau midyear population estimates.
 Percent change calculated from unrounded data.
 The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data.

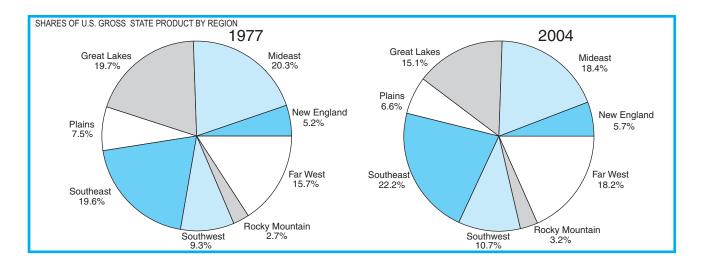

<sup>4.</sup> The metropolitan area definitions used by BEA for its personal income estimates are the new county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004 and February 2005) for Federal statistical purposes.

### Appendix A

# **Additional Information About the NIPA Estimates**

### **Statistical Conventions**

Current-dollar GDP is a measure of the market value of goods, services, and structures that are produced in the economy in a particular period. The changes in current-dollar GDP can be decomposed into quantity and price components. Quantities, or "real" measures, and prices are expressed as index numbers with the reference year—at present, the year 2000—equal to 100.1

The annual changes in quantities and prices are calculated using a Fisher formula that incorporates weights from 2 adjacent years. For example, the annual percent change in real GDP for 2001–2002 uses prices for 2001 and 2002 as weights, and the 2001-2002 annual percent change in the GDP price index uses quantities for 2001 and 2002 as weights. Because the Fisher formula allows for the effects of changes in relative prices and in the composition of output over time, the resulting quantity or price changes are not affected by the substitution bias that is associated with changes in quantities and prices calculated using a fixed-weighted formula. These annual changes are "chained" (multiplied) together to form time series of quantity and price indexes. The percent changes in the Fisher indexes are not affected by the choice of the reference year.

BEA also publishes implicit price deflators (IPDs), which are calculated as the ratio of the current-dollar value of a component to the chained-dollar value of the component, multiplied by 100. The values of an IPD are very close to the values of the corresponding "chain-type" price index.

The measures of real GDP and its major components are also presented in dollar-denominated form, designated "chained (2000) dollar estimates." For most series, these estimates are computed by multiplying the current-dollar value in 2000 by a corresponding quantity index number and then dividing by 100. For example, if a current-dollar GDP component equaled \$100 in 2000 and if real output for this component increased by 10 percent in 2001, then the chained (2000) dollar value of this component in 2001 would be \$110 (\$100  $\times$  1.10). The percent changes calculated from the chained (2000) dollar estimates and from the quantity indexes are the same; any differences will be small and due to rounding.

The chained-dollar values for the detailed GDP components will not necessarily sum to the chained-dollar estimate of GDP (or to any intermediate aggregate) in a table, because the relative prices that are used as weights for any period other than the reference year differ from those of the reference year. A measure of the effect of such

differences is provided by a "residual" line—the difference between the chained-dollar value of the main aggregate in the table and the sum of the most detailed components in the table. For periods close to the reference year, when the relative prices that are used as weights have usually not changed much, the residuals tend to be small, and the chained-dollar estimates can be used to approximate the contributions to growth and to aggregate the detailed estimates. For periods further from the reference year, the residuals tend to be larger, and the chained-dollar estimates are less useful for analyses of contributions to growth. In particular, for components for which relative prices are changing rapidly, the calculation of contributions based on chained-dollar estimates may be misleading even just a few years from the reference year. Thus, contributions derived from quantity indexes provide a better measure than contributions derived from chained-dollar estimates; contributions based on quantity indexes are shown in selected NIPA tables 1.1.2, 1.2.2, 1.5.2, 2.3.2, 3.9.2, 4.2.2, and 5.3.2.

For quarters and months, NIPA estimates are presented at annual rates, which show the value that would be registered if the rate of activity that is measured for a quarter or for a month were maintained for a full year. Annual rates are used so that periods of different lengths—for example, quarters and years—may be more easily compared. These annual rates are determined simply by multiplying the estimated rate of activity by 4 (for quarterly data) or by 12 (for monthly data).

For most quarterly NIPA estimates, *percent changes* in the estimates are also expressed at annual rates. Calculating these *changes* requires a variant of the compound interest formula:

$$r = \left[ \left( \frac{x_t}{x_0} \right)^{m/n} - 1 \right] \times 100$$

where r is the percent change at an annual rate;  $x_t$  is the level of activity in the later period;  $x_o$  is the level of activity in the earlier period; m is the periodicity of the data (for example, 1 for annual data, 4 for quarterly data, or 12 for monthly data); and n is the number of periods between the earlier periods and the later periods (that is, t-0).

Quarterly and monthly NIPA estimates are seasonally adjusted if necessary. Seasonal adjustment removes from the time series the average effects of variations that normally occur at about the same time and in about the same magnitude each year—for example, weather, holidays, and tax payment dates. After seasonal adjustment, cyclical and other short-term changes in the economy stand out more clearly.

#### Appendix B

# Suggested Reading

The Bureau of Economic Analysis (BEA) has published a wealth of information about the methodologies that are used to prepare its national, industry, international, and regional accounts. In addition, most of this information is available on BEA's Web site at <www.bea.gov>. Look under "Methodologies"; for articles from the Survey of Current Business, look under "Publications."

#### **National accounts**

The national accounts encompass the detailed estimates in the national income and product accounts (including gross domestic product) and the estimates of wealth and related estimates.

National income and product accounts (NIPAs). This series of papers documents the conceptual framework of the NIPAs and the methodologies that have been used to prepare the estimates.

An Introduction to National Economic Accounting (1985) [also in the March 1985 Survey]

Corporate Profits: Profits Before Tax, Profits Tax Liability, and Dividends (2002)

Government Transactions (1988)

Personal Consumption Expenditures (1990)

The methodologies described in these papers have been updated and improved, typically as part of the comprehensive and annual revisions of the NIPAs.

The following SURVEY articles describe the most recent comprehensive revision of the NIPAs.

"Improved Estimates of the National Income and Product Accounts for 1929–2002: Results of the Comprehensive Revision" (February 2004)

"Preview of the Revised NIPA Estimates for 1997 Effects of Incorporating the 1997 Benchmark I-O Accounts and Proposed Definitional and Statistical Changes" (January 2003)

"Preview of the 2003 Comprehensive Revision of the National Income and Product Accounts"

Changes in Definitions and Classifications (June 2003)

New and Redesigned Tables (August 2003) Statistical Changes (September 2003) In addition, see the following articles.

"Annual Revision of the National Income and Product Accounts" (August 2005).

"Updated Summary NIPA Methodologies" (November 2004) describes the source data and the methods that are used to prepare the current-dollar and real estimates of GDP.

"Chained-Dollar Indexes: Issues, Tips on Their Use, and Upcoming Changes" (November 2003) discusses the advantages of using chain-weighted indexes and the challenges of using chained dollars.

"Measuring the Services of Commercial Banks in the NIPAs: Changes in Concepts and Methods" (September 2003)

"Measuring the Services of Property-Casualty Insurance in the NIPAs: Changes in Concepts and Methods" (October 2003)

"Reliability of the NIPA Estimates of U.S. Economic Activity" (February 2005) evaluates the principal NIPA estimates by examining the record of revisions to them.

Fixed assets and consumer durable goods. Fixed Assets and Consumer Durable Goods in the United States, 1925–97 (2003) discusses the concepts and statistical considerations that underlie the estimates and their derivation.

"Fixed Assets and Consumer Durable Goods for 1925–2002" (May 2004) describes the improvements that were incorporated into these estimates as part of the comprehensive NIPA revision. "Fixed Assets and Consumer Durable Goods for 1993–2003" (September 2004) describes additional improvements that were incorporated into these estimates as part of the annual NIPA revision.

#### Mission Statement and Strategic Plan

The mission statement of the Bureau of Economic Analysis and the latest update to its strategic plan for improving the accuracy, reliability, and relevance of the national, industry, regional, and international accounts are available on BEA's Web site at <www.bea.gov> under "About BEA."

#### **Industry accounts**

The industry accounts consist of the input-output accounts, the gross-domestic-product-by-industry accounts, and one satellite account.

"Improved Annual Industry Accounts for 1998–2003" (June 2004) describes the comprehensive revision of the annual input-output accounts and the GDP-by-industry accounts that features the integration of the two sets of accounts.

In addition, see the following articles.

"Preview of the Benchmark Input-Output Accounts for 2002" (September 2005) includes the proposed new sectors that are based on the 2002 North American Industry Classification System.

"Preview of the Comprehensive Revision of the Annual Industry Accounts: Integrating the Annual Input-Output Accounts and the Gross-Domestic-Product-by-Industry Accounts" (March 2004) provides the details about the comprehensive revision.

"Annual Industry Accounts" (January 2005)

"Benchmark Input-Output Accounts for the U.S. Economy, 1997" (December 2002)

**Satellite accounts.** These accounts extend the analytical capacity of the input-output accounts by focusing on a particular aspect of economic activity.

"U.S. Travel and Tourism Satellite Accounts" For 1996 and 1997 (July 2000) For 1998–2003 (September 2004) For 2001–2004 (June 2005)

#### International accounts

The international accounts encompass the international transactions accounts, direct investment, and international transactions in services.

International transactions accounts (ITAs). The Balance of Payments of the United States: Concepts, Data Sources, and Estimating Procedures (1990) describes the methodologies used to prepare the estimates in the ITAs and the international investment position of the United States. These methodologies are usually updated and improved as part of the annual revisions of the ITAs.

The annual revisions of the ITAs are described in a series of articles, the latest of which was published in the July 2005 Survey.

**Direct investment.** International Direct Investment: Studies by the Bureau of Economic Analysis (1999) is a collection of previously published articles on U.S. direct investment abroad and foreign direct investment in the United States. It also includes the following information.

The "Methodology for U.S. Direct Investment Abroad," which is also available in U.S. Direct

Investment Abroad: 1994 Benchmark Survey, Final Results (1998)

"A Guide to BEA Statistics on U.S. Multinational Companies," which is also available in the March 1995 Survey

"A Guide to BEA Statistics on Foreign Direct Investment in the United States," which is also available in the February 1990 SURVEY

In addition, the updated methodology for foreign direct investment in the United States is available in Foreign Direct Investment in the United States: Final Results From the 1997 Benchmark Survey (2001).

International services. U.S. International Transactions in Private Services: A Guide to the Surveys Conducted by the Bureau of Economic Analysis (1998) describes 11 surveys. It includes classifications, definitions, release schedules, the methods used to prepare the estimates, and samples of the survey forms.

"Selected Issues in the Measurement of U.S. International Services" (June 2002) describes key issues in defining and measuring insurance, wholesale and retail trade, finance, construction, and utilities services and explores possible actions to address these issues.

### Regional accounts

The regional accounts include estimates of personal income and gross state product.

**Personal income.** Estimates of personal income are prepared for states and for local areas.

"Comprehensive Revision of State Personal Income for 1969–2003" (May 2004) describes the improvements in the methodology that are used to prepare the estimates and that are part of a comprehensive revision.

"The Reliability of the State Personal Income Estimates" (December 2003) evaluates the estimates of state personal income and of selected components by examining the revisions of these estimates.

"Comprehensive Revision of Local Area Personal Income for 1969–2002" (June 2004) summarizes the improvements in the methodology that is used to prepare the estimates for counties and metropolitan areas. The detailed methodology is available on the CD–DOM Regional Economic Information System, 1969–2003.

Gross state product. "Comprehensive Revision of Gross State Product" (January 2005) summarizes the sources and the methods that are used to prepare the estimates.

"Gross State Product by Industry for 1997–2004" (July 2005) presents the most recent annual revision of these estimates.
